Introduction

The use of local anesthesia in pediatric patients in dentistry is key to be able to perform different surgical procedures with guarantees and safety. An exhaustive knowledge on the part of the professional in the management of pain in children is therefore indispensable. This 120% online program offers an update on the proper use of anesthetic drugs, the approach to the minor patient in the pre-surgical period and the behavior of the minor in a situation that sometimes generates anxiety. All this will be possible thanks to the multimedia content provided by the specialized teaching team that teaches this program.

“

A Postgraduate Certificate that will allow you to be aware of the latest developments in pediatric patient care before surgery"

Pain is a complex and multidimensional mediated phenomenon that requires the use of drugs for its total or partial elimination. In pediatric dentistry, it is undoubtedly a necessary requirement to be able to carry out the intervention with guarantees. This Postgraduate Certificate will delve into the pain process and the use of anesthesia in pediatric patients through a comprehensive curriculum taught by a teaching team with extensive experience in pediatric dentistry.

A program that lasts 2 months, where students will be able to update their knowledge and be aware of the latest scientific studies that delve into pain control and surgical treatments in pediatric patients. This will be possible thanks to the multimedia teaching material enriched with video summaries, detailed videos and complementary readings that make up the syllabus of this course.

Likewise, the simulations of real cases presented by the specialized professionals that integrate this online program will be of great direct and practical application in the dental practice.

An excellent opportunity that TECH offers to all dental professionals who wish to pursue a high-level degree without neglecting other areas of your life. Students only need an electronic device to connect to the virtual platform and access the content of this Postgraduate Certificate, without attendance or fixed schedules. Students only need an electronic device to connect to the virtual platform and access the content of this Postgraduate Certificate, without attendance or fixed schedules. A flexible modality, which also allows students to distribute the course load according to their needs. A program, which is at the educational forefront, with which to renew knowledge in a more agile and simple way.

In addition, and in order to obtain the best results with the Postgraduate Certificate, it includes the exclusive participation of a figure of international prestige in the field of Pediatric Dentistry. A professional versed in this sector who will support the teaching team through the development of 10 masterclasses in video format, in which he will share his experience in relation to different areas of the syllabus, allowing students to implement into their practice the strategies that have placed him as one of the best dentists for children and adolescents in the world.

This **Postgraduate Certificate in Pain Management and Pediatric Dental Surgical Treatments** contains the most comprehensive and up-to-date educational program on the market. Its most notable features are:

- ◆ Practical cases presented by experts in Dentistry
- ◆ The graphic, schematic, and practical contents with which they are created, provide scientific and practical information on the disciplines that are essential for professional practice
- ◆ Practical exercises where self-assessment can be used to improve learning
- ◆ Its special emphasis on innovative methodologies
- ◆ Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ◆ Content that is accessible from any fixed or portable device with an Internet connection

A Postgraduate Certificate in which you will be able to delve into the behavior of the pediatric patient during local anesthesia”

“

In the Virtual Campus, you will find 10 exclusive masterclasses, so you can update your praxis based on the clinical practice of an eminence of the Pediatric Dentistry sector at an international level"

The program's teaching staff includes professionals from the sector who contribute their work experience to this program, as well as renowned specialists from leading societies and prestigious universities.

The multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide immersive knowledge programmed to learn in real situations.

This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise throughout the program. For this purpose, the student will be assisted by an innovative interactive video system created by renowned and experienced experts.

It delves into the concept of pain and the proper use of analgesics in young patients.

A flexible educational option that allows you to combine your work with a quality university education.

02

Objectives

The main purpose of this Postgraduate Certificate is the refreshing of knowledge on pain control and surgical treatments in pediatric patients. Therefore, at the end of the 120 teaching hours of this program, the dental professional will have updated their knowledge in the phases of the pain process, the different techniques to approach patients at an early age and the main techniques of local anesthesia. The faculty that teaches this program will accompany students during this program to achieve these goals.

“

A Postgraduate Certificate in which you will be able to renew your knowledge on the basic principles of preoperative surgery in pediatric dentistry”

General Objectives

- ♦ Update the professional's knowledge in the different areas covered by comprehensive dental care in pediatric patients from birth to 14 years of age, with data-based scientific evidence
- ♦ Promote work strategies based on a comprehensive approach to the patient and individualized attention to each child according to their age and medical, dental and emotional needs
- ♦ Encourage the acquisition of technical skills and abilities, through a powerful audiovisual system, and the possibility of development through online simulation workshops and/or specific training
- ♦ Encourage professional stimulation through continued specialization and research
- ♦ Promote understanding of the integral and multidisciplinary nature of pediatric dentistry, the importance of orderly, systematized and ethical teamwork and the role of the dentist working with the pediatric population as a health educator for children and their families

Specific Objectives

- ◆ Recognize the phases of the painful process and the action that anaesthetic drugs have on its surgical management
- ◆ Know the principles necessary to guide the behavior of pediatric patients during local anesthesia
- ◆ Explain dosage in the administration of local anesthesia
- ◆ Describe the proper way to perform local anesthesia techniques in children to obtain effective anesthesia prior to pain-producing dental procedures
- ◆ Explain the basic principles of preoperative surgery in pediatric dentistry

A Postgraduate Certificate that will take you through the main surgical treatments and pain management"

03

Course Management

The management and the extensive teaching team that make up this Postgraduate Certificate have been selected taking into account their extensive experience in pediatric dentistry, as well as in the delivery of high-level teaching. Their knowledge and the current activity of the teaching staff will be reflected in the syllabus that makes up this Postgraduate Certificate. Likewise, professionals who study this online program will have specialized teachers at their disposal who will answer any questions that may arise regarding the content of this course.

“

Learn from leading professionals, the latest advances in procedures in the field of pain management and pediatric dental surgical treatments”

International Guest Director

Professor Raman Bedi is the Chairman of the Global Child Dental Fund and was previously Chief Dental Officer in England, i.e. the most senior advisor on dentistry in each of the four UK governments and head of the dental profession.

Since 2012 Raman has been the founding chair of the oral health working group of the World Federation of Public Health Associations, which raises the importance of oral health issues affecting global public health. He is a practicing specialist, focusing exclusively on the comprehensive oral rehabilitation of young children. He was a consultant to the NHS in pediatric dentistry from 1991 to 2005 and is on the General Dental Council's list of specialists in pediatric dentistry and dental public health. He is a consultant to WHO on curriculum development in the field of patient safety and dentistry, and was co-chair of the World Expert Committee on the management and prevention of dental caries. Recently, he was asked by WHO to review dental services in Oman.

Raman served as head of dental public health at the Eastman Dental Institute at University College London and director of the National Centre for Transcultural Oral Health. He was also co-director of the World Health Organization Collaborating Centre at the Eastman Dental Institute. He is currently professor emeritus at King's College London. He is one of the few researchers to have been awarded a Doctor of Science degree by the University of Bristol (2003) for his contribution to dental research and a Doctor of Humane Letters degree (2010) by AT Still University (Arizona) for his scholarly contribution to the social sciences.

Structure and Content

TECH uses the Relearning system in all its programs, based on the reiteration of content, which favors the consolidation of knowledge in a more natural and progressive way. A system that is integrated in this program, where the dental professional will make an incursion into the process of pain, local anesthetics, the mechanisms of action, its advantages, as well as the graphic evaluation of pain for children in the preverbal period. The curriculum is fully accessible from the beginning of the program, so that the professional can organize his or her time according to their needs.

“

A unique, key and decisive program to boost your professional development”

05

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

At TECH we use the Case Method

In a given situation, what should a professional do? Throughout the program, students will face multiple simulated clinical cases, based on real patients, in which they will have to do research, establish hypotheses, and ultimately resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method. Specialists learn better, faster, and more sustainably over time.

With TECH you will experience a way of learning that is shaking the foundations of traditional universities around the world.

According to Dr. Gérvas, the clinical case is the annotated presentation of a patient, or group of patients, which becomes a "case", an example or model that illustrates some peculiar clinical component, either because of its teaching power or because of its uniqueness or rarity. It is essential that the case is based on current professional life, trying to recreate the real conditions in the dentist's professional practice.

“

Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method”

The effectiveness of the method is justified by four fundamental achievements:

1. Dentists who follow this method not only grasp concepts, but also develop their mental capacity by means of exercises to evaluate real situations and apply their knowledge.
2. Learning is solidly translated into practical skills that allow the student to better integrate into the real world.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

Relearning Methodology

At TECH we enhance the case method with the best 120% online teaching methodology available: Relearning.

This university is the first in the world to combine the study of clinical cases with a 120% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, a real revolution with respect to the mere study and analysis of cases.

The student will learn through real cases and by solving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

With this methodology we have trained more than 115,000 dentists with unprecedented success, in all specialties regardless of the workload. Our pedagogical methodology is developed in a highly competitive environment, with a university student body with a strong socioeconomic profile and an average age of 43.5 years old.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by TECH's learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Educational Techniques and Procedures on Video

TECH introduces students to the latest techniques, the latest educational advances, and to the forefront of medical techniques. All of this in direct contact with students and explained in detail so as to aid their assimilation and understanding. And best of all, you can watch the videos as many times as you like.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Expert-Led Case Studies and Case Analysis

Effective learning ought to be contextual. Therefore, TECH presents real cases in which the expert will guide students, focusing on and solving the different situations: a clear and direct way to achieve the highest degree of understanding.

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.
Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Quick Action Guides

TECH offers the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical, and effective way to help students progress in their learning.
