Introduction

Speech disorders can cause other associated problems, so it is important to have trained speech therapists who are able to identify, assess and intervene in this type of pathologies. It must be taken into account that there are sectors that are more prone to develop this type of voice problems in their professionals, such as teachers, journalists, singers, etc., who rely on their voice as their main working tool, but sometimes do not know how to take care of them.

“

Speech-language pathologists must be aware of the latest developments to treat voice disorders and help their patients”

The latest advances in Speech Therapy, both clinical and educational, are giving an important twist to the new methodological approaches related to the detection, assessment and intervention in Speech, Language and Communication Disorders, with increasing incidence in children and youth school population.

Knowing what the specific educational needs arising from speech disorders are, how to identify them, what is their idiosyncrasy in terms of signs or observable characteristics and what models of both direct and indirect intervention are the most appropriate, are all key aspects for any process of speech therapy re-education.

In addition, it is important to take into account that professionals such as speakers, journalists, commercials, announcers, actors, singers, etc., require knowledge and management of their phonatory apparatus, since its use is essential for their work. In this sense, it is also important to know the multifactorial nature of the voice and its alterations. The changes that occur in the human voice over time are related, among other factors, to the maturation and development of the phonorespiratory system, as well as to its deterioration.

For this reason, TECH has designed this social commitment program to help specialize highly qualified professionals and develop their personal, social and labor skills during the course of the program. The graduate will be able to learn in a more organic, simpler and more efficient way by motivating critical thinking and development.

This program is designed to give the student access to the specific knowledge of this discipline in an intensive and practical way. A great value for any professional. Additionally, as it is a 100% online education, it is the students themselves who decide where and when to study. Without the restrictions of fixed timetables or having to move between classrooms, this course can be combined with work and family life.

This **Advanced Master's Degree in Comprehensive Speech Therapy** contains the most complete and up-to-date program on the market. The most important features include:

- ◆ The latest technology in e-learning software
- ◆ Intensely visual teaching system, supported by graphic and schematic contents that are easy to assimilate and understand.
- ◆ The development of practical case studies presented by practising experts
- ◆ State-of-the-art interactive video systems
- ◆ Teaching supported by telepractice
- ◆ Continuous updating and retraining systems
- ◆ Self-regulated learning: full compatibility with other occupations
- ◆ Practical exercises for self-assessment and learning verification
- ◆ Support groups and educational synergies: Questions to the expert, discussion and knowledge forums
- ◆ Communication with the teacher and individual reflection work.
- ◆ Content that is accessible from any fixed or portable device with an Internet connection.
- ◆ Supplementary documentation databases are permanently available, even after the program

A high-level scientific program, supported by an advanced technological development and the teaching experience of the best professionals"

“

A deep and complete immersion into strategies and approaches in Comprehensive Speech Therapy"

Our teaching staff is made up of working professionals. In this way we ensure that we deliver the educational update we are aiming for. A multidisciplinary team of qualified and experienced professionals in different environments, who will develop the theoretical knowledge efficiently, but, above all, will put at the service of the specialization the practical knowledge derived from their own experience: one of the differential qualities of this Advanced Master's Degree.

This command of the subject is complemented by the effectiveness of the methodological design of this Grand Master. Developed by a multidisciplinary team of e-learning experts, it integrates the latest advances in educational technology. In this way, you will be able to study with a range of easy-to-use and versatile multimedia tools that will give you the necessary skills you need for La specialization.

The design of this program is based on Problem-Based Learning: an approach that views learning as a highly practical process. To achieve this remotely, telepractice is used. With the help of an innovative, interactive video system and *learning from an expert*, you will be able to acquire the knowledge as if you were dealing with the case you are studying in real time. A concept that will make it possible to integrate and fix learning in a more realistic and permanent way.

A program created for professionals who aspire to excellence that will allow you to acquire new skills and strategies in a smooth and effective way.

We have the best teaching methodology and a multitude of simulated cases that will help you prepare for real situations.

02

Objectives

The objective is to enable highly qualified professionals for work experience. An objective that is complemented, moreover, in a global manner, by promoting human development that lays the foundations for a better society. This objective is focused on helping professionals reach a much higher level of expertise and control. A goal that you can take for granted, with a high-intensity and high-precision specialization.

“

If your goal is to improve in your profession, to acquire a qualification that will enable you to compete among the best, look no further: Welcome to TECH”.

General Objectives

- ♦ Identify, assess, diagnose and effectively intervene in the different speech, language and communication disorders that have developed
- ♦ Learn the specific anatomical and functional aspects of the phonatory system as a basis for the rehabilitation of vocal pathologies and for vocal work with voice professionals
- ♦ Gain in-depth knowledge of the most current diagnostic and treatment techniques
- ♦ Delve into the knowledge and analysis of the results obtained in objective voice assessments
- ♦ Learn how to implement a correct and complete assessment of vocal function in daily clinical practice
- ♦ Know the most important features of the voice and learn to listen to different types of voices in order to know which aspects are altered to guide clinical practice
- ♦ Analyze the different possible vocal pathologies and achieve scientific rigor in treatments
- ♦ Learn about different approaches to the treatment of vocal pathologies
- ♦ Raise awareness of the need for vocal care
- ♦ Teach voice therapy work focused on different voice professionals.
- ♦ Learn the importance of multidisciplinary work in some voice pathologies
- ♦ View the voice as a global ability of the person and not as an exclusive act of the phonatory system
- ♦ Solve real case studies with current therapeutic approaches based on scientific evidence

Specific Objectives

Module 1. Basis of Speech and Language Therapy

- ♦ Delve into the concept of Speech Therapy and in the areas of action of the professionals of this discipline
- ♦ Acquire knowledge about the concept of Language and the different aspects that compose it
- ♦ Delve into the typical development of language, knowing its stages, as well as being able to identify the warning signs of language development.
- ♦ Understand and be able to classify the different Language pathologies, from the different approaches currently existing
- ♦ Know the different batteries and tests available in the discipline of Speech Therapy, to be able to carry out a correct evaluation of the different areas of Language
- ♦ Be able to develop a Speech Therapy report in a clear and precise way, both for the families and for the different professionals
- ♦ Understand the importance and effectiveness of working with an interdisciplinary team, whenever necessary and favorable for the child's rehabilitation

Module 2. Dyslalias: Assessment, Diagnosis, and Intervention

- ♦ Acquisition of the aspects involved in the articulation of the phonemes used in Spanish
- ♦ Delve into the knowledge of dyslalia and the different types of classifications and subtypes that exist
- ♦ Understand and be able to apply the processes involved in the intervention, at the same time, to acquire knowledge to be able to intervene and to make own and effective material for the different Dyslalias that can be presented

Module 3. Dyslexia: Assessment, Diagnosis, and Intervention

- ♦ Know everything involved in the evaluation process, in order to be able to carry out the most effective Speech Therapy intervention possible
- ♦ Learn about the reading process from vowels and syllables to paragraphs and complex texts
- ♦ Analyze and develop techniques for a correct reading process
- ♦ Be aware and be able to involve the family in the child's intervention, so that they are a part of the process and that this collaboration is as effective as possible

Module 4. Specific Language Disorder

- ♦ Acquire sufficient knowledge to be able to assess a Verbal Fluency Disorder
- ♦ Identify the main language disorders and their therapeutic treatment
- ♦ Knowing the need for an Intervention supported and supported by both the family and the team of teachers at the child's School

Module 5. Understanding Autism

- ♦ Contact with the disorder. Identify myths and false beliefs
- ♦ Know the different areas affected, as well as the first indicators within the therapeutic process
- ♦ Promote professional competence based on a global vision of the clinical picture; multifactorial assessment
- ♦ Provide the necessary tools for an adequate specific adaptation in each case
- ♦ Broaden the vision of the field of action; professionals and family as an active role
- ♦ The role of the speech therapist as a dynamic element in the patient with autism.

Module 6. Genetic Syndromes

- ♦ Be able to know and identify the most frequent genetic syndromes currently in use

- ♦ In-depth knowledge about the characteristics of each of the syndromes described in the degree
- ♦ Acquire optimal knowledge to carry out a correct and functional evaluation of the different symptoms that may occur
- ♦ Delve into different intervention tools, including material and resources, both manipulatives and computer devices, as well as possible adaptations to be made All this, in order to achieve an effective and efficient intervention by the professional

Module 7. Dysphemia and/or Stuttering: Assessment, Diagnosis, and Intervention

- ♦ Know the concept of Dysphemia, including its symptoms and classification
- ♦ Be able to differentiate between Normal Dysfluency and Verbal Fluency impairment, such as Dysphemia
- ♦ Delve into in the marking of objectives and in the depth of the intervention of a Dysphemic child, in order to be able to carry out the most efficient and effective work possible
- ♦ Understand and be aware of the need to keep a record of all the sessions and everything that happens in them

Module 8. Dysarthria in Children and Adolescents

- ♦ Acquisition of the basic fundamentals of dysarthria in children and adolescents, both conceptual and classificatory, as well as the particularities and differences with other pathologies.
- ♦ Be able to differentiate the symptomatology and characteristics of verbal apraxia and dysarthria, being able to identify both pathologies by carrying out an adequate assessment process.
- ♦ Clarify the role of the speech therapist in both the assessment and intervention process, being able to apply appropriate and personalized exercises to the child
- ♦ Know the environments and contexts of development of children, being able to give adequate support in all of them and to guide the family and educational professionals in

the rehabilitation process

- ♦ Know the professionals involved in the assessment and intervention of Dysarthric children, and the importance of collaboration with all of them during the intervention process

Module 9. Understanding Hearing Impairments

- ♦ Assimilation of the anatomy and functionality of the organs and mechanisms involved in hearing
- ♦ Deepening of the concept of Hypoacusis and the different types that exist
- ♦ Know the assessment and diagnostic tools to assess hearing loss and the importance of a multidisciplinary team to carry it out
- ♦ Be able to carry out an effective intervention in a Hypoacusia, knowing and internalizing all the phases of such intervention
- ♦ Know and understand the functioning and importance of Hearing Aids and Cochlear Implants
- ♦ Delve into Bimodal Communication and to be able to understand its functions and their importance
- ♦ Approach the world of Sign Language, knowing its history, its structure, and the importance of its existence
- ♦ Understand the role of the Interpreter in Sign Language (ILSE)

Module 10. Psychological Knowledge of Interest in the Speech Therapy Field

- ♦ Understand the area of knowledge and work of child and adolescent psychology: object of study, areas of action, etc.
- ♦ Become aware of the characteristics that a professional working with children and adolescents should have or enhance
- ♦ Acquire the basic knowledge necessary for the detection and referral of possible Psychological Problems in children and adolescents that may disturb the child's well-being and interfere in the Speech Therapy rehabilitation and to reflect on them

- ◆ Know the possible implications that different psychological problems (emotional, cognitive, and behavioral) may have on speech therapy rehabilitation
- ◆ Acquire knowledge related to attentional processes, as well as their influence on Language and intervention strategies to be carried out at the Speech Therapy level together with other professionals
- ◆ Delve into the subject of Executive Functions and to know their implications in the area of Language, as well as to acquire strategies to intervene on them at a Speech Therapy level together with other professionals
- ◆ Acquire knowledge on how to intervene at the level of Social Skills in children and adolescents, as well as to deepen in some concepts related to them, and to obtain specific strategies to enhance them
- ◆ Know different Behavior Modification strategies that are useful in consultation to achieve both the initiation, development, and generalization of appropriate behaviors, as well as the reduction or elimination of inappropriate behaviors
- ◆ Delve into the concept of motivation and to acquire strategies to promote it in consultation
- ◆ Acquire knowledge related to School failure in children and adolescents
- ◆ Know the main study habits and techniques that can help to improve the performance of children and adolescents from a Speech Therapy and Psychological point of view

Module 11. Anatomical, Physiological and Biomechanical Basics of the Voice

- ◆ Learn about the phylogenetic origin of the phonatory system
- ◆ Learn about the evolutionary development of the human larynx
- ◆ Learn the main muscles and the functioning of the respiratory system
- ◆ Learn about the main anatomical structures that make up the larynx and how they function
- ◆ Learn the histology of the vocal cords
- ◆ Analyze the vibratory cycle of the vocal cords
- ◆ Analyze the different structures and cavities that form the vocal tract
- ◆ Study the different theories that have given answers to how voice is produced

- ◆ Study the characteristics of phonatory physiology and its main components
- ◆ Gain in-depth knowledge of the different exploratory tests used in the morphofunctional exploration of the larynx
- ◆ Learn the instruments needed to perform a morphofunctional assessment of the phonatory system

Module 12. Objective Exploration of the Voice

- ◆ Analyze and understand the results obtained with objective screening tests
- ◆ Learn in which cases the performance of such objective tests is indicated or not
- ◆ Learn concepts of speech acoustics
- ◆ Learn the different observable parameters in a spectrogram
- ◆ Learn how to analyze a spectrogram
- ◆ Know how to collect voice samples for acoustic analysis
- ◆ Interpret results obtained in the acoustic analysis of the voice
- ◆ Optimally use different acoustic analysis programs

Module 13. Functional Assessment of the Voice

- ◆ Learn to listen to different types of voices with objective criteria
- ◆ Apply different audio-perceptual scales in daily practice
- ◆ Learn about the different existing vocal function assessment tests
- ◆ Know the concept of fundamental frequency and learn how to obtain it from a speech sample
- ◆ Know the phonetogram and learn to use it in daily practice
- ◆ Calculate vocal functionality indexes
- ◆ Perform a complete anamnesis based on the patient's characteristics
- ◆ Learn about additional tests that can guide us in our treatment

Module 14. Normal Voice vs. Pathological Voice

- ◆ Differentiating normal voice from pathological voice

- ♦ Differentiate between the concepts of euphonia and dysphonia
- ♦ Learn to detect early symptoms/traits of dysphonia through listening
- ♦ Know the different types of voices and their characteristics
- ♦ Analyze the different types of functional dysphonia
- ♦ Analyze the different types of congenital organic dysphonia
- ♦ Analyze the different types of acquired organic dysphonia
- ♦ Analyze the different types of organic-functional dysphonia
- ♦ Be able to identify the observed vocal pathology in an image
- ♦ Learn how to analyze and classify a voice according to its audible acoustic features

Module 15. Medical-Surgical Treatments of Vocal Pathology

- ♦ Learn about the different existing phonosurgery techniques
- ♦ Learn about the different common laryngeal surgeries
- ♦ Be familiar with the different medications prescribed by physicians in case of dysphonia
- ♦ Give importance to teamwork in the rehabilitation of voice pathologies

Module 16. Speech Therapy for Voice Disorders

- ♦ Know when speech therapy treatment is or isn't indicated.
- ♦ Know and plan the general objectives of rehabilitation
- ♦ Know the different possible approaches in the rehabilitation approach
- ♦ Learn the basic principles of muscle conditioning
- ♦ Learn the basic principles of respiratory conditioning
- ♦ Learn the basic principles of hygiene therapy
- ♦ Learn the basic principles of confidential voice therapy
- ♦ Learn the basic principles of resonant voice therapy

- ♦ Learn the basic principles of the accent method
- ♦ Learn the basic principles of vocal function exercises
- ♦ Learn the basic principles of fluent phonation
- ♦ Learn the basic principles of Lee Silverman LSVT
- ♦ Learn the basic principles of physiological therapy
- ♦ Learn the basic principles of semi-occluded vocal tract exercises
- ♦ Learn the basic principles of manual laryngeal massage
- ♦ Learn the basic principles of facilitating sounds
- ♦ Learn the basic principles of ESTILL VOICE TRAINING
- ♦ Learn the basic principles of the PROEL method
- ♦ Learn the basic principles of the NEIRA method
- ♦ Learn the basic principles of the body- voice- movement approach
- ♦ Know how to choose the most effective therapy for each patient in relation to their specific vocal characteristics and needs

Module 17. Speech Therapy for Pathologies

- ♦ Approach rehabilitation treatment in pathologies of functional origin
- ♦ Approach rehabilitation treatment in pathologies of organic origin, both congenital and acquired
- ♦ Approach rehabilitation treatment in pathologies of organic-functional origin
- ♦ Address rehabilitative treatment in patients who underwent a laryngectomy
- ♦ Address vocal conditioning in patients attending a clinic due to gender reassignment
- ♦ Solve practical cases

Module 18. The Professional Use of the Spoken Voice

- ♦ Learn the risk groups of professional vocal pathology

- ♦ Apply a plan of hygienic measures to care for the voice
- ♦ Learn the specific objectives of vocal work for each group of professionals
- ♦ Learn to work on aspects of vocal flexibility
- ♦ Learn to work on aspects of vocal resistance
- ♦ Learn to work on the versatility of the voice required in these professional groups
- ♦ Make work proposals according to each group
- ♦ Solve practical cases
- ♦ List the components of the singing voice
- ♦ Describe the aspects of emission, articulation and intonation
- ♦ Explain the different vocal registers

Module 19. Professional Singing Voice

- ♦ Program voice therapy goals in professional singing voice
- ♦ Describe the artistic part of the process
- ♦ Explain, handle and manipulate the tone
- ♦ Explain, manage and manipulate intensity in a healthy way
- ♦ Know, handle and manipulate projection in a healthy way
- ♦ Know how to apply a vocal resistance program without damage
- ♦ Define the basis of sensorimotor learning applied to the singing voice
- ♦ Localize the muscular work in each emission
- ♦ Solve practical cases
- ♦ Define the relationship between psychology and voice
- ♦ Explain the influence of vocal aspects on non-verbal communication

Module 20. Psychology and Voice

- ♦ Explain the importance of multidisciplinary work in the prevention and treatment of voice

pathologies

- ♦ Describe the relationship between voice and emotions
- ♦ Describe the relationship between voice and stress
- ♦ Explain the different types of dysphonia in which a multidisciplinary approach is needed
- ♦ Analyze aspects of voice problem prevention from a psychological and health perspective

Module 21. Vocal Rehabilitation

- ♦ Gain in-depth knowledge of the most current diagnostic and treatment techniques
- ♦ Analyze the different possible vocal pathologies and achieve scientific rigor in treatments
- ♦ Solve real case studies with current therapeutic approaches based on scientific evidence
- ♦ Delve into the knowledge and analysis of the results obtained in objective voice assessments
- ♦ Learn about different approaches to the treatment of vocal pathologies
- ♦ Raise awareness of the need for vocal care
- ♦ View the voice as a global ability of the person and not as an exclusive act of the phonatory system

03 Skills

Once all the contents have been studied and the objectives of the Advanced Master's Degree in Comprehensive Speech Therapy have been achieved, the professional will have superior competence and performance in this field. A comprehensive approach, in a top-level qualification, that makes all the difference.

“

Achieving excellence in any profession requires effort and perseverance. But above all the support you will get from our professionals, who will receive the boost you need with the necessary means and assistance. At TECH, we offer you everything you need”

General Skills

- ♦ Delve into concepts and logopedic procedures and each and every one of the areas of action of the professionals of this discipline
- ♦ Acquire knowledge about the dimensions of Language and Speech
- ♦ Delve into the evolutionary and normative neurodevelopmental aspects
- ♦ Understand and be able to classify the different Speech and Language Pathologies
- ♦ Acquire skills for the elaboration of Technical Reports
- ♦ Assimilate effective intervention practices from a multidisciplinary approach
- ♦ Possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context
- ♦ Apply acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their field of study.
- ♦ Integrate knowledge and face the complexity of making judgments based on incomplete or limited information, including reflections on the social and ethical responsibilities linked to the application of their knowledge and judgments
- ♦ Know how to communicate conclusions, knowledge, and supporting arguments to specialized and non-specialized audiences in a clear and unambiguous way
- ♦ Acquire the learning skills that will enable them to continue studying in a manner that will be largely self-directed or autonomous

Specific Skills

- ♦ Acquisition of the aspects involved in psycholinguistic production in Spanish Language
- ♦ Delve into the knowledge of Logopathies and the different types of classifications and subtypes that exist
- ♦ Understand and be able to apply the processes involved in the intervention, as well as to acquire the knowledge to be able to intervene and to create their own effective material for the different dyslalias that may occur
- ♦ Be aware and be able to involve the family, as well as the rest of the educational agents in the whole Speech Therapy process, considering the contextual and Psychosocial variables
- ♦ Learn and integrate the use of technologies, as well as the application of Innovative Therapies and resources from other related disciplines
- ♦ Know the necessary tools for approaching daily clinical practice in an efficient way, achieving the improvement of vocal function in your patients.
- ♦ Adapt your working methodology to the individual idiosyncrasies of each patient.
- ♦ Know when to refer to other professionals or to carry out team treatments with the ultimate goal of patient benefit and improvement.
- ♦ Explore the infinite possibilities of the human voice and be able to practice them both on yourself and on your patients
- ♦ Conduct comprehensive reports on your patients' vocal function for coordination with other professionals involved in treatment.
- ♦ Self-evaluate your clinical practice, adjusting the daily work to the evolution of your patients.
- ♦ Know the characteristics of the voice and the parameters that define them.
- ♦ Interpret voices in relation to the emotions and the psychological-affective variables.
- ♦ Analyze differential variables in the use of voice according to context.
- ♦ Recognize characteristics in the use of the voice according to the profession.
- ♦ Practice different vocal registers adapted to the role.
- ♦ Describe the use of your own voice and interpret the feelings in your own body.
- ♦ Practice self-evaluating your own voice and measuring its own parameters.
- ♦ Acquire knowledge of what the phonatory apparatus is like and how it works in order to understand vocal practice.
- ♦ Understand how the voice works in relation to explanatory theories of phonation.
- ♦ Perform speech therapy intervention in all the required areas, applying principles of coherent intervention and with professional skill

Our objective is very simple: to offer you quality education, with the best teaching system available today, so that you can achieve excellence in your profession"

04

Course Management

Within the concept of total quality of the program, TECH is proud to provide students with a teaching staff of the highest level, chosen for their proven experience in the educational field. Professionals from different areas and fields of expertise that make up a complete, multidisciplinary team. A unique opportunity to learn from the best.

“

Our professors will put their experience and teaching skills at your disposal to offer you a stimulating and creative specialization process”

International Guest Director

Awarded on multiple occasions for her Clinical Excellence, Dr. Sarah Schneider is a renowned Speech-Language Pathologist highly specialized in the comprehensive treatment of voice and upper airway related conditions.

In this way, she has worked in prestigious international institutions such as UCSF Health in the United States. There, she has led several clinical programs that have allowed the implementation of interdisciplinary approaches for the optimal treatment of voice disorders, swallowing problems and even communication difficulties. Thanks to this, he has helped patients to optimize their quality of life considerably by overcoming complex pathologies ranging from Laryngeal Dystonia or abnormal Vocal Vibrations to Voice Rehabilitation in transgender users. In this same line, he has contributed significantly to numerous singers and professional speakers to optimize their vocal performance.

She also balances this work with her facet as a Clinical Researcher. As such, she has written multiple scientific articles on subjects such as the most innovative techniques for the restoration of the voice in people who have lost it due to surgery or serious injuries such as laryngeal cancer. Her line of study also includes the use of advanced technologies for the diagnosis and treatment of common Phonetic Dysfunctions, among which Hypernasality is included.

In his firm commitment to improving the overall well-being of individuals, he has shared his findings at various conferences on a global scale with the aim of advancing progress in this field. Through these initiatives, she has enabled specialists to not only update on the most recent advances in voice restoration, but also to develop effective strategies for the prevention of vocal injuries in experts who rely on their oral ability, actors being a clear example of this.

Dr. Schneider, Sarah

- Director of Speech-Language Pathology at UCSF Health, California, United States
- Speech Pathologist for Dr. Robert T. Sataloff in Philadelphia, Pennsylvania
- Speech Pathologist at Vanderbilt Voice Center in Nashville, Tennessee
- Master of Science degree in Speech-Language Pathology from Marquette University
- Bachelor of Science degree in Communication Sciences and Disorders from Marquette University
- Member of:
 - Editorial Board of the *Journal of Voice*
 - California Hearing and Speech Association

“

Thanks to TECH, you will be able to learn with the best professionals in the world”

International Guest Director

Dr. Elizabeth Anne Rosenzweig is an internationally renowned specialist dedicated to the care of children with hearing loss. As a Speech Language Expert and Certified Therapist, she has pioneered several telepractice-based early assistance strategies of broad benefit to patients and their families.

Dr. Rosenzweig's research interests have also focused on trauma support, culturally sensitive auditory-verbal practice and personal coaching. Her active scholarly work in these areas has earned her numerous awards, including Columbia University's Diversity Research Award.

Thanks to her advanced skills, she has taken on professional challenges such as the leadership of the Edward D. Mysak Communication Disorders Clinic at Columbia University. She is also known for her academic career, having served as a professor at Columbia's Teachers College and as a collaborator with the General Institute of Health Professions. On the other hand, she is an official reviewer of publications with a high impact in the scientific community such as The Journal of Early Hearing Detection and Intervention and The Journal of Deaf Studies and Deaf Education.

In addition, Dr. Rosenzweig manages and directs the AuditoryVerbalTherapy.net project, from where she offers remote therapy services to patients located in different parts of the world. She is also a speech and audiology consultant for other specialized centers located in different parts of the world. She has also focused on developing non-profit work and participating in the Listening Without Limits Project for children and professionals in Latin America. At the same time, the Alexander Graham Bell Association for the Deaf and Hard of Hearing relies on her as its vice-president.

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization”

At TECH Education School we use the Case Method

In a given situation, what should a professional do? Throughout the program, students will be presented with multiple simulated cases based on real situations, where they will have to investigate, establish hypotheses and, finally, resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method.

With TECH, educators can experience a learning methodology that is shaking the foundations of traditional universities around the world.

It is a technique that develops critical skills and prepares educators to make decisions, defend their arguments, and contrast opinions.

“

Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method.

The effectiveness of the method is justified by four fundamental achievements:

1. Educators who follow this method not only grasp concepts, but also develop their mental capacity, by evaluating real situations and applying their knowledge.
2. The learning process is solidly focused on practical skills that allow educators to better integrate the knowledge into daily practice.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life teaching.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines 8 different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

Educators will learn through real cases and by solving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.

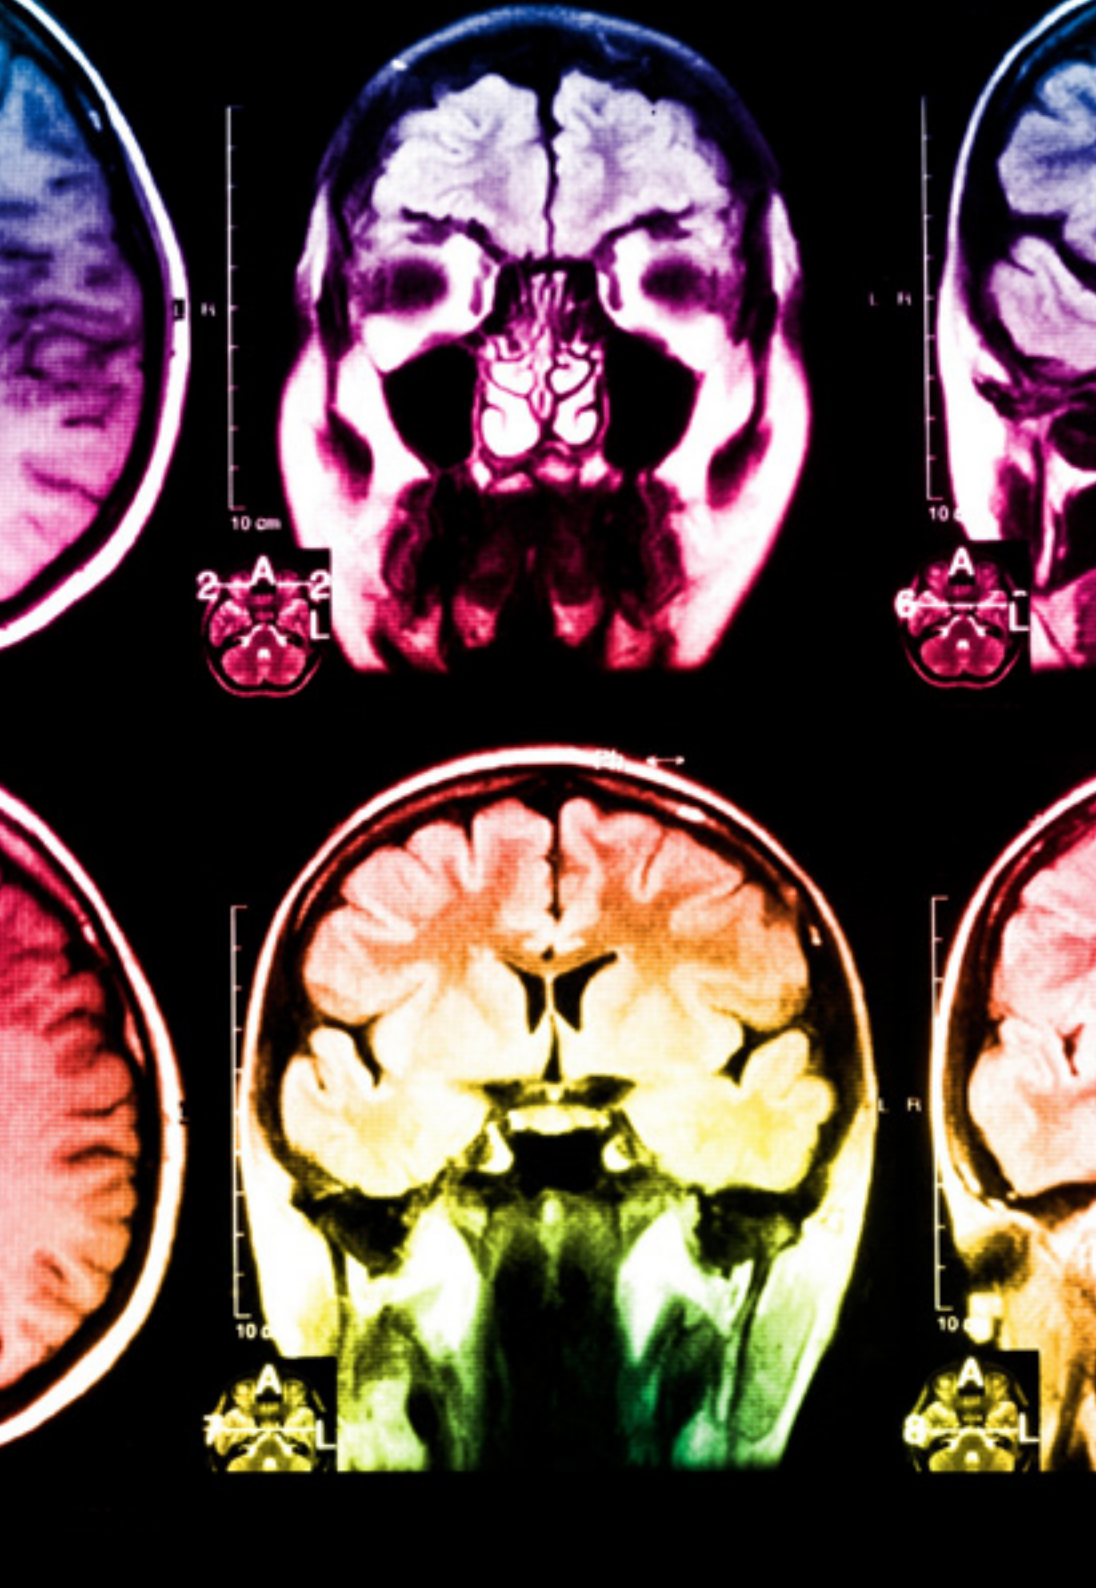

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

With this methodology we have prepared more than 85,000 educators with unprecedented success in all specialties. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by our learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialist educators who teach the course, specifically for the course, so that the teaching content is really specific and precise.

These contents are then adapted in audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high-quality pieces in each and every one of the materials that are made available to the student.

Video Education Techniques and Procedures

TECH introduces students to the latest techniques, with the latest educational advances, and to the forefront of Education. All this, first-hand, with the maximum rigor, explained and detailed for your assimilation and understanding. And best of all, students can watch them as many times as they want.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Expert-Led Case Studies and Case Analysis

Effective learning ought to be contextual. Therefore, TECH presents real cases in which the expert will guide students, focusing on and solving the different situations: a clear and direct way to achieve the highest degree of understanding.

Testing & Retesting

We periodically assess and re-assess students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.
Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Quick Action Guides

TECH offers the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical and effective way to help students progress in their learning.

Certificate

This Advanced Master's Degree in Comprehensive Speech Therapy guarantees students, in addition to the most rigorous and up-to-date education, access to an Advanced Master's Degree issued by TECH Technological University.

“

Successfully complete this program and receive your university qualification without having to travel or fill out laborious paperwork"

The Advanced Master's Degree in **Advanced Master's Degree in Comprehensive Speech Therapy** guarantees students, in addition to the most rigorous and up-to-date education, access to a Postgraduate Certificate issued by **TECH Global University**.

TECH Global University is an official European University publicly recognized by the Government of Andorra (*official bulletin*). Andorra is part of the European Higher Education Area (EHEA) since 2003. The EHEA is an initiative promoted by the European Union that aims to organize the international training framework and harmonize the higher education systems of the member countries of this space. The project promotes common values, the implementation of collaborative tools and strengthening its quality assurance mechanisms to enhance collaboration and mobility among students, researchers and academics.

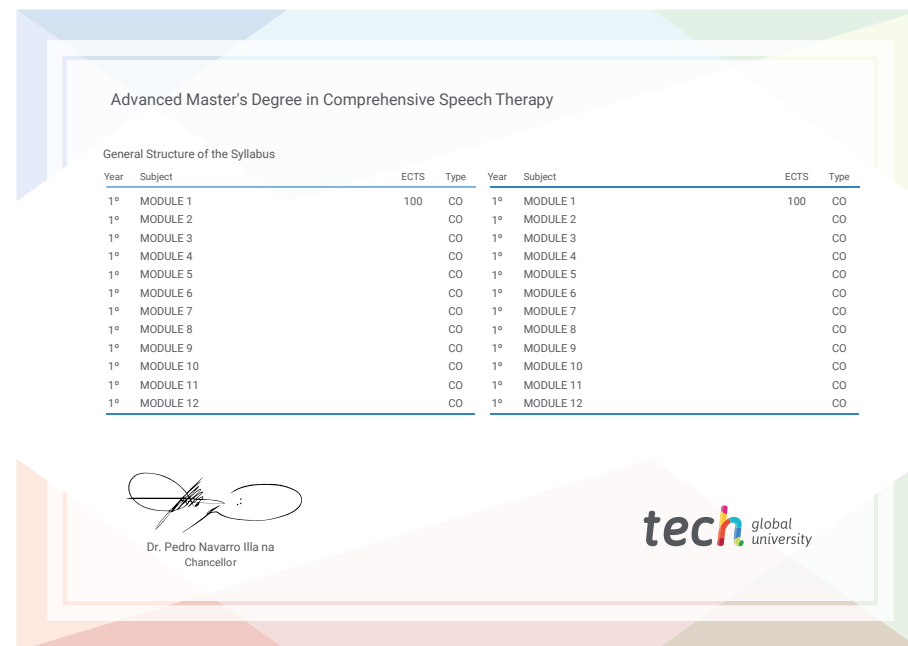

This **TECH Global University** title is a European program of continuing education and professional updating that guarantees the acquisition of competencies in its area of knowledge, providing a high curricular value to the student who completes the program.

Title: **Advanced Master's Degree in Comprehensive Speech Therapy**

Modality: **online**

Duration: **2 years**

Accreditation: **120 ECTS**

*Apostille Convention. In the event that the student wishes to have their paper diploma issued with an apostille, TECH EDUCATION will make the necessary arrangements to obtain it, at an additional cost.
