Introduction

The discovery of one's talents and their importance for professional development is increasingly appreciated. Companies do not want professionals who work in exchange for money, but are increasingly looking for commitment to the company's own values.

“

This Postgraduate Certificate in Educational Coaching and Talent Management will generate a sense of confidence in the performance of your profession, which will help you grow personally and professionally”

Talent brings added value and the reward of personal satisfaction, so discovering and developing talent must be one of the most important educational priorities. Talent is related to multiple intelligences, as it is diverse, and to personal learning styles. An education that includes them is more inclusive and highly valued

In search of meaningful lives, vocation connects talent with the needs of the world. It is important that teachers find meaning from their professional and personal vocation in an aligned manner. For it is only from the discovery of one's own vocation that one can be inspired to inspire others. Vocation keeps teachers away from pessimism and malaise, giving them the motivation to grow and innovate.

Both talent and vocation generate paths for growth in an uncertain world. This is why creativity in problem solving is becoming more and more necessary because a lot of innovation is needed. Moreover, human beings are innately creative. So, connecting with the creative capacity is synonymous with enjoyment. The schools of the present must be creative schools if they are to keep up with the times.

Current education is too focused on what to do (tasks) and how to do them (methods). But we often get carried away and confuse the purpose and meaning of education.

In education, there is a lot of talk about values that are not always exercised. There is and little discussion of limiting beliefs that produce educators who cannot get out of their small headspace or who feel powerless to break through their own truths and grow with their crises.

The revision of one's own beliefs is an exercise in growth that opens doors that make it possible to face the many challenges posed by education and places us in a creative attitude. Values must be part of an active educational culture committed to its function of improving society, acting by revealing counter-values and fostering a critical attitude in that sense. The values of a center or institution must be known and shared, generating a collective way of being.

Coaching addresses generative processes because it is capable of delving into values, beliefs and identity. Identity questions teachers, students and educational institutions about who we are, and gives us direction and meaning.

Methodology

This training program offers a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

At TECH Education School we use the Case Method

In a given situation, what should a professional do? Throughout the program students will be presented with multiple simulated cases based on real situations, where they will have to investigate, establish hypotheses and, finally, resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method.

With TECH, educators can experience a learning methodology that is shaking the foundations of traditional universities around the world.

It is a technique that develops critical skills and prepares educators to make decisions, defend their arguments, and contrast opinions.

“

Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method”

The effectiveness of the method is justified by four fundamental achievements:

1. Educators who follow this method not only grasp concepts, but also develop their mental capacity, by evaluating real situations and applying their knowledge.
2. The learning process is solidly focused on practical skills that allow educators to better integrate the knowledge into daily practice.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life teaching.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

Relearning Methodology

At TECH we enhance the case method with the best 100% online teaching methodology available: Relearning.

Our University is the first in the world to combine case studies with a 100% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, which represent a real revolution with respect to simply studying and analyzing cases.

Educators will learn through real cases and by solving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

With this methodology we have trained more than 85,000 educators with unprecedented success in all specialties. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by our learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialist educators who teach the course, specifically for the course, so that the teaching content is really specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Educational Techniques and Procedures on Video

TECH introduces students to the latest techniques, with the latest educational advances, and to the forefront of Education. All this, first-hand, with the maximum rigor, explained and detailed for your assimilation and understanding. And best of all, you can watch them as many times as you want.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive multimedia content presentation training Exclusive system was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Expert-Led Case Studies and Case Analysis

Effective learning ought to be contextual. Therefore, TECH presents real cases in which the expert will guide students, focusing on and solving the different situations: a clear and direct way to achieve the highest degree of understanding.

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises: so that they can see how they are achieving your goals.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Quick Action Guides

TECH offers the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical, and effective way to help students progress in their learning.
