Introduction

This intensive program addresses the educational relationship between the family and society, situating the two educational contexts and addressing the importance of family education. In addition, the programmed teaching carried out by the school is differentiated from the spontaneous teaching carried out by the family, therefore analyzing formal, non-formal and informal education and studying the relations between the family and the school. A unique opportunity to implement the latest techniques of socio-educational intervention in daily practice, therefore improving the teaching methods taught in the classroom, as well as their impact in external fields of great importance, such as family and friends.

“

Take the step and open a new avenue of development and growth to your career in teaching, specializing in Family Socio-Educational Intervention"

In this complete program, students will go through a long and effective learning process, which will allow them to deepen their knowledge of Family Socio-Educational Intervention and Intermediation, addressing the different needs of the students. Throughout these months of specialization, students will delve into the stages of the family in their educational work, that is, the education that takes place during early and second childhood. On the other hand, they will analyze the training that the school should provide to families, dedicating a specific topic to the School of Parents as a tool for preparing families.

They will also analyze the characteristics of the family understood as a social system and the various changes that have taken place in the family institution during the last decades. Finally, they will study the role of the community with special emphasis on the media and its educational influence, values education and family orientation.

On the other hand, this comprehensive program will study the definition of learning difficulties and the basic characteristics of students with these difficulties, in order to promote the detection of these students and to be able to design proposals to meet their educational needs. For this purpose, there will be a review of the student's evolutionary milestones and an in-depth study of the conceptualization and etiology of learning difficulties, analyzing the different existing types and offering guidelines for their detection and intervention by teachers in the regular classroom.

Personalized education is a way of understanding education as a service to freedom and the integral development of each human being, achieving a true process of personal empowerment. This is the reason why this program will delve into the meaning of this pedagogical conception and its philosophical and anthropological foundations, studying its principles, its purposes and its implementation.

All these processes must be materialized in a real and possible adaptation to the needs of each student. For this purpose, an intensive and comprehensive study will show how to develop educational adaptations using the most innovative tools and materials from experts with extensive experience in the sector, in order to create a process that really allows to boost students in their learning, taking into account their optimal ways of dealing with each field of study.

Methodology

This training program offers a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

At TECH Education School we use the Case Method

In a given situation, what should a professional do? Throughout the program students will be presented with multiple simulated cases based on real situations, where they will have to investigate, establish hypotheses and, finally, resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method.

With TECH, educators can experience a learning methodology that is shaking the foundations of traditional universities around the world.

It is a technique that develops critical skills and prepares educators to make decisions, defend their arguments, and contrast opinions.

“

Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method”

The effectiveness of the method is justified by four fundamental achievements:

1. Educators who follow this method not only grasp concepts, but also develop their mental capacity, by evaluating real situations and applying their knowledge.
2. The learning process is solidly focused on practical skills that allow educators to better integrate the knowledge into daily practice.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life teaching.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

Relearning Methodology

At TECH we enhance the case method with the best 100% online teaching methodology available: Relearning.

Our University is the first in the world to combine case studies with a 100% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, which represent a real revolution with respect to simply studying and analyzing cases.

Educators will learn through real cases and by solving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

With this methodology we have trained more than 85,000 educators with unprecedented success in all specialties. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by our learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialist educators who teach the course, specifically for the course, so that the teaching content is really specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Educational Techniques and Procedures on Video

TECH introduces students to the latest techniques, with the latest educational advances, and to the forefront of Education. All this, first-hand, with the maximum rigor, explained and detailed for your assimilation and understanding. And best of all, you can watch them as many times as you want.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive multimedia content presentation training Exclusive system was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Expert-Led Case Studies and Case Analysis

Effective learning ought to be contextual. Therefore, TECH presents real cases in which the expert will guide students, focusing on and solving the different situations: a clear and direct way to achieve the highest degree of understanding.

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises: so that they can see how they are achieving your goals.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Quick Action Guides

TECH offers the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical, and effective way to help students progress in their learning.
