# Introduction

In the last cycles of education, students are trying to find the path that will lead them to their future career. This decision-making comes at a time when young people still lack the information and maturity to make a safe and conscious choice. This program has been created to prepare teachers capable of promoting the reflective process that incorporates desires and aptitudes to the students' choice process, providing them with the most complete and innovative personal and practical tools in Vocational and Professional Guidance. A highly skilled process that will teach you how to bring the reality of the workplace into the classroom by offering students a realistic, stimulating and accessible perspective that will allow them to direct their efforts towards clear and focused goals.

“

*Become a Vocational and Professional Guidance specialist with the knowledge and support skills that students need at a crucial time in their training"*

Individualized decision-making requires a different approach, not only because of the complexity of the decision, but also because of the degree of maturity of today's students, who are less familiar with the world of work. The guidance department can develop skills that prepare them for the future as well as a new methodology and activities that have an impact on their personal maturity.

Aspects such as socioeconomic differences, disabilities or learning differences must be addressed with special interest and in an innovative way through guidance.

TECH proposes a different and effective model to help in the pre-university stages based on experience with a large sample of adolescents and that can be implemented in a simple way with guarantees.

This program is aimed at active teachers of secondary school and vocational training, counselors, and postgraduates in psychology or psychopedagogy who want to deepen their knowledge in this field. The recommended ratios of 1 counselor for every 250 students are far from the reality throughout Europe, opening a job opportunity for professionals in this area.

The preparation in this program format will allow the participant to be open to different approaches and guidance models, new ideas and resources to access in a simple and agile way. You will gain new classroom skills and a new perspective on how to approach mentoring. The resources that teachers or graduate students will find in the program will allow them to obtain better results in the medium and long term both in vocational decisions and in the preparation for their students' working lives.

Both the activities proposed and the innovative approaches to guidance that you will encounter will enable the students to improve their professional skills and their department's performance in the center.

This program helps professionals in this field to increase their ability to succeed, which results in better praxis and performance that will have a direct impact on educational outcomes, on the improvement of the educational system and on the social benefit for the whole community.

This **Professional Master's Degree in Vocational and Professional Guidance** contains the most complete and up-to-date educational program on the market.

*A program created for teaching effectiveness: so that you learn faster, in a more stimulating way and on a more permanent basis"*

# Methodology

This training program offers a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

*Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"*

## At TECH Education School we use the Case Method

In a given situation, what should a professional do? Throughout the program students will be presented with multiple simulated cases based on real situations, where they will have to investigate, establish hypotheses and, finally, resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method.

*With TECH, educators can experience a learning methodology that is shaking the foundations of traditional universities around the world.*

*It is a technique that develops critical skills and prepares educators to make decisions, defend their arguments, and contrast opinions.*

“

*Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method”*

The effectiveness of the method is justified by four fundamental achievements:

1. Educators who follow this method not only grasp concepts, but also develop their mental capacity, by evaluating real situations and applying their knowledge.
2. The learning process is solidly focused on practical skills that allow educators to better integrate the knowledge into daily practice.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life teaching.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

## Relearning Methodology

At TECH we enhance the case method with the best 100% online teaching methodology available: Relearning.

Our University is the first in the world to combine case studies with a 100% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, which represent a real revolution with respect to simply studying and analyzing cases.

*Educators will learn through real cases and by solving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.*

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

With this methodology we have trained more than 85,000 educators with unprecedented success in all specialties. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

*Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.*

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by our learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

### Study Material

All teaching material is produced by the specialist educators who teach the course, specifically for the course, so that the teaching content is really specific and precise.

These contents are then adapted in audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

### Educational Techniques and Procedures on Video

TECH introduces students to the latest techniques, with the latest educational advances, and to the forefront of Education. All this, first-hand, with the maximum rigor, explained and detailed for your assimilation and understanding. And best of all, students can watch them as many times as they want.

### Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

### Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

#### Expert-Led Case Studies and Case Analysis

Effective learning ought to be contextual. Therefore, TECH presents real cases in which the expert will guide students, focusing on and solving the different situations: a clear and direct way to achieve the highest degree of understanding.

#### Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

#### Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

#### Quick Action Guides

TECH offers the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical, and effective way to help students progress in their learning.
