tech 06 | Introduction

The emission of greenhouse gases into the atmosphere is one of the unsustainable dynamics that the chemical industry is urgently seeking to reduce. For this reason, the sector is constantly innovating with disruptive mechanisms and strategies that allow for more efficient management of its carbon footprint. Through these processes, this field of development aims to adapt to the strictest environmental regulations and the expectations of consumers concerned about the environmental impact of their manufacturing.

At the same time, TECH has designed a Postgraduate Certificate program where students can acquire up-to-date theoretical and practical knowledge on how to improve industrial procedures, minimize risks, and contribute to the sustainability of the surrounding ecosystems. The syllabus of this program covers the main management systems for the water used in these tasks and the management of waste generated by production practices. It also analyzes the ISO 9001 standard and how it verifies the control and assurance of tasks in this field. It also delves into calibration, equipment maintenance, and certifications of the resulting materials.

The entire educational itinerary will be conducted from a 100% online learning platform. In it, the students will have at their disposal conventional study materials, complementary readings, explanatory videos, and a wide variety of multimedia resources. In addition, in order to access these, you will not have to follow tight schedules or submit to continuous evaluations. On the contrary, the program has been shaped to ensure greater personalization of educational objectives. At the same time, this teaching opportunity is guided by a prestigious faculty with experience in different areas of corporate sustainability.

This Postgraduate Certificate in Quality Management of Chemical Products and Processes contains the most complete and up-to-date program on the market. The most important features include:

- The development of practical cases presented by experts in Chemistry Engineering
- The graphic, schematic, and practical contents with which they are created, provide scientific and practical information on the disciplines that are essential for professional practice
- Practical exercises where self-assessment can be used to improve learning
- Its special emphasis on innovative methodologies
- Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- Content that is accessible from any fixed or portable device with an Internet connection

After completing this university program, you will be a true expert in the management of waste resulting from the activities of the Chemical Industry"

Analyze with the best teaching material the most effective tools to study corporate carbon and environmental footprints"

The program's teaching staff includes professionals from the field who contribute their work experience to this educational program, as well as renowned specialists from leading societies and prestigious universities.

The multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide immersive education programmed to learn in real situations.

This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise during the educational year. For this purpose, the students will be assisted by an innovative interactive video system created by renowned and experienced experts.

An intensive and exclusive Postgraduate Certificate program where you will learn about the regulations and strategies that regulate environmental management.

Extend your knowledge of this university program even further thanks to the scientific readings provided by the faculty.

tech 10 | Objectives

General Objectives

- Promote environmental management in the chemical industry
- Apply quality strategies in the chemical industry
- Raise awareness of the importance of sustainability in terms of economy, environment, and society
- Compile technological advances in Chemical Engineering

The case studies provided by the faculty will lead you into the most effective methodologies for improving sustainability in the Chemical Industry"

Objectives | 11 tech

Specific Objectives

- Examine international regulations and environmental management tools in the chemical industry
- Develop specialized knowledge on corporate carbon and environmental footprinting
- Assess the importance of the chemical life cycle
- Specify the quality guarantees for chemical products and processes
- Present integrated management systems

tech 14 | Course Management

Management

Dr. Barroso Martín, Isabel

- Expert in Inorganic Chemistry, Crystallography and Mineralogy
- Postdoctoral researcher of the I Own Research and Transfer Plan of the University of Málaga
- Research Staff at the University of Málaga
- ORACLE Programmer in CMV Consultants Accenture
- PhD in Sciences from the University of Málaga
- Master's Degree in Applied Chemistry specialization in materials characterization from the University of Málaga
- Master's Degree in SE, High School, Vocational Training, and Language Teaching specializing in Physics and Chemistry University of Malaga

Course Management | 15 tech

Professors

Dr. Jiménez Gómez, Carmen Pilar

- Technical support staff at the Central Research Services of the University of Málaga
- Laboratory technician assistant at Acerinox
- Laboratory technician in Axaragua
- Predoctoral fellow at the Department of Inorganic Chemistry, Crystallography, and Mineralogy of the University of Málaga
- PhD in Chemical Sciences from the University of Málaga
- Chemical Engineer from the University of Málaga
- Direction of Final Degree Project in Chemical Engineering (2016)
- Teaching collaborator in different degrees: Chemical Engineering, Energy Engineering, and Industrial Organization Engineering at the University of Málaga

Mr. Barroso Martín, Santiago

- Legal Advisor in Paralegal at Vicox Legal
- Legal Content Editor at Engineering and Advanced Integration S.A. / BABEL
- Administrative Lawyer at the Illustrious College of Lawyers of Málaga
- Paralegal Advisor at Garcia de la Vega Attorneys
- Law Degree from the University of Málaga
- Master's Degree in Corporate Legal Consultancy (MAJE) from the University of Málaga
- Expert Master's Degree in Labor, Tax and Accounting Consulting by Help T Pyme

tech 18 | Structure and Content

Module 1. Sustainability and Quality Management in the Chemical Industry

- 1.1. Environmental Management Systems
 - 1.1.1. Environmental Management
 - 1.1.2. Environmental Impact Assessment
 - 1.1.3. ISO 14001 Standard and Continuous Improvement
 - 1.1.4. Environmental Auditing
- 1.2. Carbon and Environmental Footprint
 - 1.2.1. Corporate Sustainability
 - 1.2.2. Corporate Carbon and Environmental Footprint
 - 1.2.3. Carbon Footprint Calculation of an Organization
 - 1.2.4. Application of the Corporate Environmental Footprint
- 1.3. Sustainable Water Management in Industry
 - 1.3.1. Planning the Sustainable Use of Water Resources through Hydrological Modeling
 - 1.3.2. Responsible Use of Water in Industrial Chemical Processes
 - 1.3.3. Use of Nature-Based Solutions in Industry
- 1.4. Life Cycle Analysis
 - 1.4.1. Sustainable Industrial Production
 - 1.4.2. Product Life Cycle Components
 - 1.4.3. Phases of the Life Cycle Analysis Methodology
 - 1.4.4. ISO 14040 Standard for Product Life Cycle Assessment
- 1.5. Quality Management Systems
 - 1.5.1. Quality Principles and Evolution
 - 1.5.2. Quality Control and Assurance
 - 1.5.3. ISO 9001
- 1.6. Process Quality Assurance
 - 1.6.1. Quality Management Systems and Its Processes
 - 1.6.2. Steps in the Quality Assurance Process
 - 1.6.3. Standardized Processes
- 1.7. Quality Assurance of the Final Product
 - 1.7.1. Standardization
 - 1.7.2. Equipment Calibration and Maintenance
 - 1.7.3. Product Approvals and Certifications

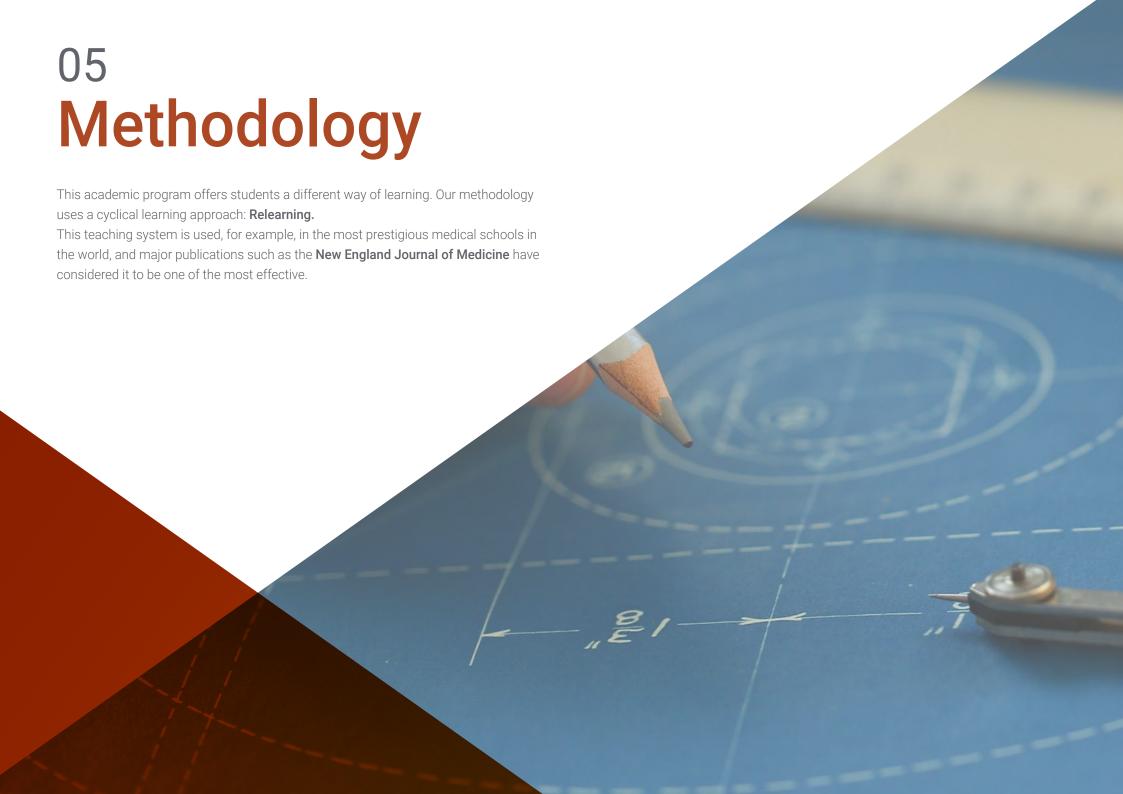

Structure and Content | 19 tech

- 1.8. Implantation of Integrated Management System
 - 1.8.1. Integrated Management System
 - 1.8.2. Implantation of Integrated Management System
 - 1.8.3. GAP Analysis
- 1.9. Change Management in the Chemical Industry
 - 1.9.1. Change Management in the Industry
 - 1.9.2. Industry of Chemical Processes
 - 1.9.3. Change Planning
- 1.10. Sustainability and Minimization: Integrated Waste Management
 - 1.10.1. Minimization of Industrial Waste
 - 1.10.2. Stages in the Minimization of Industrial Waste
 - 1.10.3. Recycling and Treatment of Industrial Waste

With this program you will address the sustainable management of water resources and the challenges of responsible water use in industry"

tech 22 | Methodology

Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world"

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

The student will learn to solve complex situations in real business environments through collaborative activities and real cases.

A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

Our program prepares you to face new challenges in uncertain environments and achieve success in your career"

The case method is the most widely used learning system in the best faculties in the world. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question that you are presented with in the case method, an action-oriented learning method. Throughout the program, the studies will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

tech 24 | Methodology

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines 8 different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH, you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

Methodology | 25 tech

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

This methodology has trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, and financial markets and instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Practising Skills and Abilities

They will carry out activities to develop specific skills and abilities in each subject area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Methodology | 27 tech

20%

Interactive Summaries

specialists in the world.

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

tech 30 | Certificate

This **Postgraduate Certificate in Quality Management of Chemical Products and Processes** contains the most complete and up-to-date program on the market.

After the student has passed the assessments, they will receive their corresponding **Postgraduate Certificate** issued by **TECH Technological University** via tracked delivery*.

The certificate issued by **TECH Technological University** will reflect the qualification obtained in the Postgraduate Certificate, and meets the requirements commonly demanded by labor exchanges, competitive examinations, and professional career evaluation committees.

Title: Postgraduate Certificate in Quality Management of Chemical Products and Processes

Official No of Hours: 150 h.

Quality Management of Chemical Products and Processes

This is a qualification awarded by this University, equivalent to 150 hours, with a start date of dd/mm/yyyy and an end date of dd/mm/yyyy.

TECH is a Private Institution of Higher Education recognized by the Ministry of Public Education as of June 28, 2018.
