Introduction

Cities constitute a new paradigm in the 21st century, facing great challenges of humanity such as overpopulation of cities, important technological transformations and greater citizen accessibility to all services. With this premise, Smart Cities emerge, which come to revolutionize the way of life in cities. If a student wants to give a boost to their profession and specialize in this field, they should not hesitate to enroll on this course. TECH offers specific training with a completely innovative academic program and an exceptional team of teachers backed by their professional experience. A successful program for professionals looking for further training.

The future of cities will be driven by new technologies. Enter this field and get to know all the latest developments to give a boost to your profession in the field of Smart Cities"

The Postgraduate Certificate in The Smart City Paradigm is the most complete on the market on this subject, due to the quality of its lessons and its practical theoretical format, which favors its study and understanding.

This Postgraduate Certificate will cover digital platforms and their impact on different areas of application, such as industry, energy, education and cybersecurity, to end up focusing on their use in public services: Smart Cities.

The most important aspects of the digitalization of cities and territories will also be discussed in depth, emphasizing two of its key elements: data as a lever and driver of change, and the citizen as the element around which all smart city actions must orbit.

The complexity of Smart City projects is an essential issue in any program, given the multitude of agents that make up the ecosystem of a city and also the large number of Smart City projects that exist, from those projects that cover a larger territory (Smart Nations) and projects that cover specific areas of the city (Smart Campus). Therefore, it is essential to have professionals in this field, which is why this program focuses especially on these aspects.

To achieve the objective of professional improvement and specialization, TECH offers cutting-edge education adapted to the latest developments in this field, with an up-to-date syllabus developed by experienced professionals who are willing to put all their knowledge at their students' disposal. It should be noted that since this is a 100% online Postgraduate Certificate, the student is not conditioned by fixed schedules or the need to move to another physical location, but can access the contents at any time of the day, balancing their work or personal life with their academic life.

This **Postgraduate Certificate in The Smart City Paradigm** contains the most complete and up-to-date program on the market. The most important features include:

- » Case studies presented by experts in Smart Cities
- » The graphic, schematic, and practical contents with which they are created, provide scientific and practical information on the disciplines that are essential for professional practice
- » Practical exercises where the self-assessment process can be carried out to improve learning
- » Special emphasis on innovative methodologies in Smart Cities
- » Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- » Content that is accessible from any fixed or portable device with an Internet connection

The completion of this Postgraduate Certificate will place engineering and architecture professionals at the forefront of the latest developments in the sector"

“ *This Postgraduate Certificate is the best investment you can make in the selection of a refresher program in the field of Smart Cities. We offer you quality and free access to content* ”

This program comes with the best educational material, providing you with a contextual approach that will facilitate your learning.

We offer you a 100% online program that will allow you to balance your study time with the rest of your daily obligations.

Its teaching staff includes professionals from the fields of engineering and architecture, who contribute their work experience to this program, as well as renowned specialists from prestigious universities and leading societies.

The multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide immersive training programmed to train in real situations.

This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise during the academic year. To do so, the professional will be assisted by an innovative interactive video system created by renowned and experienced experts in Smart Cities.

02 Objectives

The program in The Smart City Paradigm is aimed at facilitating the performance of the professional to acquire and learn the main developments in this field, which will allow them to practice their profession with the highest quality and professionalism.

“

Our goal is to make you the best professional in your sector. And for this we have the best methodology and content”

General Objectives

- » Recognize Smart City projects as particular use cases of digitalization projects through platforms, to know their main particularities and the state of the art of these projects in an international context
- » Value the two essential elements in any smart city project, data as the main asset and the citizen as the main motivator of such projects
- » Analyze the different technologies and models to address the digital transformation of cities in depth and understand the advantages and opportunities that a model based on integration platforms offers
- » Delve into the general architecture of Smart Cities Platforms and the applicable reference legislation, using international standards
- » Identify the role that new digital technologies play in the construction of the smart city model: LPWAN, 5G, Cloud and Edge Computing, IoT, Big Data, Artificial Intelligence
- » Know the functionalities of the different layers that constitute the digital platforms for cities in detail: support layer, acquisition layer, knowledge layer and interoperability layer
- » Differentiate between digital government services and Smart city services, the possibilities of integration between the two worlds and the resulting new services for citizens, public administration services 4.0
- » Differentiate between the two types of solutions offered within the Smart Cities smart services layer: vertical solutions and transversal solutions
- » In-depth breakdown of the main vertical solutions applied in cities: waste management, parks and gardens, parking, public transport management, urban traffic control, environment, security and emergencies, water consumption and energy management
- » Know the transversal solutions of the smart services layer that can be implemented in smart city projects in detail
- » Delve into the difference between city management and nation management, and identify their main challenges and lines of activity
- » Acquire the skills and knowledge necessary for the design of technological solutions in the fields of tourism, home care, agriculture, ecosystemic spaces and urban service provision
- » Have a global perspective of Smart Cities projects, identifying the most useful tools in each phase of the project
- » Recognize the keys to success and how to deal with the possible difficulties that a Smart City project may present
- » Identify the main trends and paradigms that will serve as leverage for the future transformation of Smart Cities
- » Conceptually design plans and solutions aligned with the Sustainable Development Goals of the 2030 Agenda

Specific Objectives

- » Delve into the evolution of Smart Cities, what have been the main changes that have led to the need to create Smart Cities and what are the challenges we face.
- » Understand how digital platforms work, and their different fields of action (industry, education, energy, etc.)
- » Perform an exhaustive analysis of two of the key axes in the definition of Smart Cities projects: data as a lever and the citizen as a motivating element of the projects
- » Differentiate, according to the size of impact, smart city, nation and campus projects
- » Have an overview of the status and differences in the approach to Smart Cities projects around the world

“

*Join us and we will help you
achieve professional excellence”*

03

Course Management

TECH has professionals specialized in each area of knowledge, who pour their work experience into their training. A multidisciplinary team with recognized prestige that has come together to offer all their knowledge in this area.

“

Our university employs the best professionals in all areas who share their knowledge in order to facilitate your learning"

International Guest Director

Ravi Koulagi is an outstanding leader in the **technology sector** and his excellent resume has earned him a number of senior positions, including **Global Director of Cloud Solutions at Cisco, Atlanta**. In this position, he has led the development and go-to-market strategy for **multi-cloud solutions**, focusing on integrating key capabilities in **computing, connectivity and security** into a comprehensive **cloud transformation** solution, strengthening the company's position in a highly competitive market.

He has also served as **Chief Technology Officer (CTO)** for the **Global Public Sector Segment**, where he has developed sales strategies in areas such as **intent-based networking, cybersecurity, multicloud data centers, collaboration and IoT portfolios** for global public sector customers. Likewise, his expertise in **Smart Cities and Internet of Things** architectures and platforms has been instrumental in the creation of **Cisco's IoT platform for Smart Cities**, as well as in leading **business development** in this area.

In addition to his responsibilities at **Cisco**, Ravi Koulagi has been a **member of the Smart City Expo USA Advisory Board**, where he has contributed to the evolution of the leading industry event in the **United States** focused on **urban transformation through technology and Smart Cities**, consolidating his position as an international expert in **urban technology and cloud innovation**. He has also contributed significantly to the industry with his **book on unified communications**, published by **Cisco Press**, and with his **three patents** related to **voice messaging and telephony systems**.

In this context, his experience ranges from the creation of **reference architectures in IoT and Smart Cities**, to the development of sales strategies and **technology partnerships**, positioning him as a key figure in the evolution and adoption of t.

Mr. Koulagi, Ravi

- Global Director of Cloud Solutions at Cisco, Atlanta, United States
- Member of the Advisory Board at Smart City Expo USA
- Chief Technology Officer (CTO) for Global Public Sector Segment at Cisco, Bangalore, India
- Global Head of IoT and Smart City Solutions at Cisco, Bangalore, India
- IoT and Smart City Solutions Architect at Cisco, Bangalore, India
- Manager, Advanced Services and Collaboration Technologies, Cisco, Bangalore, India
- Manager of Software Development, Systems Engineering and VoIP Solutions at Cisco, California
- Technical Leader in IP and UC, and Integrated Services Routers at Cisco, California
- Technology Advisor for the World Bank's Smart Cities Investment Program at the International Finance Corporation (IFC)
- AI Applications for Growth at Kellogg Executive Education

“

Thanks to TECH, you will be able to learn with the best professionals in the world”

Management

Mr. Garibi, Pedro

- » Technical Electronic Engineer from the University of Deusto
- » Telecommunications Engineer by the University of Deusto
- » Master's Degree in Mobile Communication from the Polytechnic University of Madrid
- » Professional with more than 20 years of experience in project management
- » Solutions architect in the fields of Smart & Safe Cities, (Indra, Huawei, T-Systems)
- » Manager of Smart City projects, both in the R&D and production areas
- » Independent Smart Cities Consultant
- » Co-chair of the United Nations U4SSC group for the elaboration of a framework for Artificial Intelligence in Smart Cities
- » Speaker at several Smart Cities congresses in Spain and Europe
- » Author of several articles on the use of intelligent platforms for the improvement of citizen security
- » Member of the Official College of Telecommunication Engineers of Spain (COIT)

Professors

Ms. Domínguez, Fátima

- » Consultant and area manager of Business Development for Public Administrations in the field of Smart Cities (Indra-Minsait)
- » Degree in Civil Engineering from the Polytechnic University of Leiria (Portugal)
- » ThePowerMBA Business Expert - Business Management and Administration
- » Responsible for the Cáceres Smart Heritage Project
- » Product owner of solutions for the intelligent management of tourist destinations
- » Expert in smart solutions in the fields of agribusiness, urban services and tourism destination management

Mr. Koop, Sergio

- » Expert in smart solutions in the fields of urban resilience, mobility, urban services and tourism destination management
- » Degree in Industrial Technologies Engineering from Carlos III University of Madrid
- » Master's Degree in Business Management from Carlos III University of Madrid
- » More than 4 years of experience as a Smart Cities consultant (Indra - Minsait)
- » Author of several reports focused on the use of disruptive technologies for the transformation of public administrations
- » Collaborator of the S3 HIGH TECHFARMING group of the EU for the development of technologies to improve agricultural productivity

Mr. Budel, Richard

- » Project management professional in the public sector
- » Diploma in Medical Anthropology from Trent University (Canada)
- » Managing Director of Simplicities Ltd
- » Managing Partner of the Public Sector Department at Sullivan & Stanley
- » Chairman of the Digital Government Advisory Board at Huawei
- » Former Chief Information Officer (CIO/CTO) at IBM and Huawei
- » Former IT Director, Department of Public Safety and Justice, Government of Ontario, Canada
- » Thought leader and speaker at events in more than 70 countries around the world
- » Collaborator in UN4SSC, EIP-SCC, Smart Cities Council and other multinational organizations

Mr. Bosch, Manuel

- » Member of the Big Data and Artificial Intelligence Cluster of the Madrid City Council in the Interoperable Projects working group
- » Graduate in Mining Engineering from the Polytechnic University of Madrid
- » Consultant in Smart Cities and Nations, (Indra - Minsait)
- » Expert in Smart Solutions in the fields of sustainability and circular economy
- » Expert in the integration of eGovernment solutions in Smart Cities environments
- » Extensive experience in Smart City projects
- » Collaborator of the thematic group "City Platforms" of the U4SSC (United for Smart Sustainable Cities) initiative coordinated by ITU
- » Author of several reports focused on the modernization of public administration through the use of new technologies

04

Structure and Content

The structure of the contents has been designed by leading professionals in the intelligent infrastructure sector, with extensive experience and recognized prestige in the profession, and aware of the benefits that the latest educational technology can bring to higher education.

“

We have the most complete and up-to-date academic program in the market. We strive for excellence and for you to achieve it too”

Module 1. The Smart Cities Paradigm

- 1.1. The Smart City
 - 1.1.1. Evolution of Smart Cities
 - 1.1.2. Global Changes and New Challenges
- 1.2. Digital Platforms
 - 1.2.1. Big Data and IoT
 - 1.2.2. Origin, Present and Future of Platforms
- 1.3. Use Cases of Digital Platforms
 - 1.3.1. Niche Platform
 - 1.3.2. Platform of Platforms
- 1.4. Smart Cities: A Digital Platform Use Case
 - 1.4.1. New Challenges in the Cities of the 21st Century. The Functional City
 - 1.4.2. Technology as an Essential Part of the Solution to the Challenges
- 1.5. The Citizen at the Center of the Smart City
 - 1.5.1. Objective of Smart Cities
 - 1.5.2. Smart Cities at the Service of the Citizen
- 1.6. From Data to Information and from Information to Knowledge
 - 1.6.1. The City: The Largest Data Repository
 - 1.6.2. Smart Cities as a Tool for Information Exploitation
- 1.7. Smart Cities, an Example of Global Work
 - 1.7.1. Cities: a Complex Environment with Many Actors
 - 1.7.2. Shared Management Model in the Cities
- 1.8. From Smart Cities to Smart Nations
 - 1.8.1. Territorial Challenges
 - 1.8.2. Solution to the Challenges of the Territory
- 1.9. From Smart Cities to the Smart Campus
 - 1.9.1. Campus Challenges
 - 1.9.2. Solution to the Campus Challenges
- 1.10. Smart Cities in the World
 - 1.10.1. Technological Maturity
 - 1.10.2. Geography of Smart City Projects

“*A comprehensive and multidisciplinary educational program that will allow you to excel in your career*”

05

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning.**

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

“

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world”

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

The student will learn to solve complex situations in real business environments through collaborative activities and real cases.

A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

“*Our program prepares you to face new challenges in uncertain environments and achieve success in your career”*

The case method is the most widely used learning system in the best faculties in the world. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question that you are presented with in the case method, an action-oriented learning method. Throughout the program, the studies will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines 8 different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH, you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

This methodology has trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, and financial markets and instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Practising Skills and Abilities

They will carry out activities to develop specific skills and abilities in each subject area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Case Studies

Students will complete a selection of the best case studies chosen specifically for this program. Cases that are presented, analyzed, and supervised by the best specialists in the world.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

06

Certificate

The Postgraduate Certificate in The Smart City Paradigm guarantees students, in addition to the most rigorous and up-to-date education, access to a Postgraduate Certificate issued by TECH Global University.

“

Successfully complete this program and receive your university qualification without having to travel or fill out laborious paperwork”

This program will allow you to obtain your **Postgraduate Certificate in The Smart City Paradigm** endorsed by **TECH Global University**, the world's largest online university.

TECH Global University is an official European University publicly recognized by the Government of Andorra ([official bulletin](#)). Andorra is part of the European Higher Education Area (EHEA) since 2003. The EHEA is an initiative promoted by the European Union that aims to organize the international training framework and harmonize the higher education systems of the member countries of this space. The project promotes common values, the implementation of collaborative tools and strengthening its quality assurance mechanisms to enhance collaboration and mobility among students, researchers and academics.

This **TECH Global University** title is a European program of continuing education and professional updating that guarantees the acquisition of competencies in its area of knowledge, providing a high curricular value to the student who completes the program.

Title: **Postgraduate Certificate in The Smart City Paradigm**

Modality: **online**

Duration: **6 weeks**

Accreditation: **6 ECTS**

*Apostille Convention. In the event that the student wishes to have their paper diploma issued with an apostille, TECH Global University will make the necessary arrangements to obtain it, at an additional cost.
