Introduction

The philosopher who aspires to bring knowledge to the secondary school classroom cannot be satisfied with mastering the contents of the syllabus. It also needs the skills of teaching adapted to this subject, which makes it interesting and accessible. This program will teach you from a practical approach designed for teachers with a didactic and training objective.

“

*A Postgraduate Certificate in the Nature of
Philosophy created for teaching professionals”*

This program approaches Philosophy from a global perspective, focusing specifically on teaching. Students can expect to gain a complete body of knowledge of the most fundamental philosophical themes, from the most purely theoretical and metaphysical to the most practical and active human issues.

In today's job market, professionals from other fields who complement their training with master's degrees in thinking and argumentation are highly valued and sought after. The philosopher's ability to see things from a different perspective, to think, as the Anglo-Saxons would say, outside the box, is a fundamental asset in the world of work.

Personally, philosophy helps us to see things, as the great Spinoza said, subaespécie aeternitatis, that is, through a prism of eternity, knowing that in the great context of the world and the universe our actions are both relevant and insignificant.

The role of philosophy as a consolatory discipline before the evils and misfortunes of this world has always been fundamental and, moreover, it allows us to better understand our nature, our actions, our morality, our being. In short, philosophy helps us to grow as people, to mature as individuals, to become more responsible citizens and to improve our work performance.

Throughout the program, students will have the opportunity to access the most important developments in philosophy applied to teaching. Guided by a very complete but very specific syllabus, students will acquire the knowledge and routines required to teach this subject or those applicable to other areas of life.

An opportunity created to add enormous value to students' CV.

This **Postgraduate Certificate in Nature of Philosophy** contains the most complete and up-to-date program on the market. The most important features include:

- ◆ The latest technology in online teaching software
- ◆ A highly visual teaching system, supported by graphic and schematic contents that are easy to assimilate and understand
- ◆ Practical cases presented by practising experts
- ◆ State-of-the-art interactive video systems
- ◆ Teaching supported by telepractice
- ◆ Continuous updating and recycling systems
- ◆ Autonomous learning: full compatibility with other occupations
- ◆ Practical exercises for self-evaluation and learning verification
- ◆ Support groups and educational synergies: questions to the expert, debate and knowledge forums
- ◆ Communication with the teacher and individual reflection work
- ◆ Content that is accessible from any fixed or portable device with an Internet connection
- ◆ Complementary documentation banks permanently available, even after the Postgraduate Certificate

The analysis of social values such as freedom, equality, the virtues of different political regimes or the ideal of justice in a profound, educational analysis”

“ *A complete and well-developed program that will enable you to include knowledge of this branch of philosophy in your teaching*”

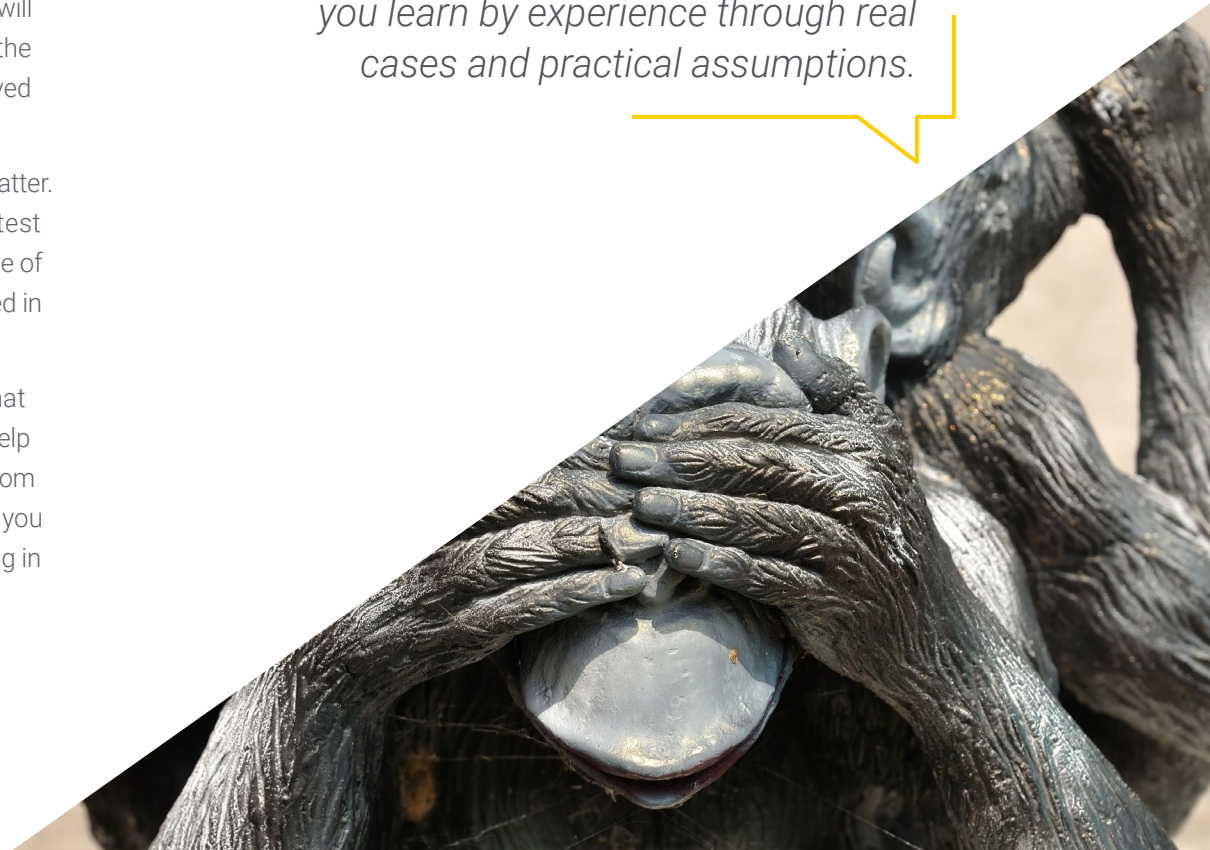

Our teaching staff is made up of philosophy professionals and active specialists. This way, we ensure that we provide you with up-to-date knowledge, which is what we are aiming for. A multidisciplinary team of qualified and experienced professionals who will develop the theoretical knowledge in an efficient manner, but, above all, will put at the service of the Postgraduate Postgraduate Certificate the practical knowledge derived from their own experience: one of the differential qualities of this training.

The effectiveness of our methodological design enhances mastery of the subject matter. Developed by a multidisciplinary team of e-learning experts, it integrates the latest advances in educational technology. In this way, you will be able to study with a range of comfortable and versatile multimedia tools that will give you the operability you need in your education.

The design of this program is based on Problem-Based Learning: an approach that conceives learning as a highly practical process. To achieve this remotely, with the help of an innovative interactive video system, and by means of telepractice and learning from an expert, you will be able to acquire the knowledge as if you were facing the case you are learning at that moment. A concept that will allow you to integrate and fix learning in a more realistic and permanent way.

Learn, in just a few months, the fundamentals of philosophy and how to present them to your students with guaranteed success.

A program focused on the ABS system, problem-based learning, which will make you learn by experience through real cases and practical assumptions.

Objectives

The objective of this Postgraduate Certificate is to provide the professional secondary school philosophy teacher with the necessary tools to turn his or her subject into a success in terms of results. A goal that, in just six weeks, you will be able to achieve with the latest knowledge in teaching, with a Postgraduate Certificate of high intensity and precision.

“

This program will allow you to update your knowledge in the Nature of Philosophy, with the use of the latest educational technology, to contribute with quality and security to decision making"

General Objectives

- ◆ Possess advanced skills for the initiation and deepening of research in the different branches of philosophy, according to the student's choice of specialty
- ◆ To develop a high reflective and critical capacity in philosophical issues and topics, both from a historical and systematic point of view, in order to provide the student with a clear understanding of the issues still current in current thought that will also serve them for their own research
- ◆ Master the methodological bases and knowledge that allow for the integration of multiple bodies of philosophical knowledge in a personal work project
- ◆ Have a fluent command of interdisciplinarity, as a basic element of philosophical reflection in its essential openness to other fields of culture and knowledge, and in the development of a reflective understanding of the conceptual foundations of these other fields

Take the step to catch up on the latest developments in Nature of Philosophical Activity"

Specific Objectives

- ◆ Provide the student with the necessary tools to carry out an autonomous and reflective philosophical practice
- ◆ Provide students with the elements of analysis and judgment that are indispensable to develop reflective activity in their daily lives as well as in the work environment
- ◆ Provide the student with the concepts necessary to appreciate the way in which understanding plays a determining role in our lives
- ◆ Provide clarifications on the logical background of rationality and on the basic mechanisms of our social practices
- ◆ Provide the student with the necessary tools to examine our self-understanding and to elaborate critiques on our ways of seeing reality
- ◆ Offer the student the necessary resources to examine the epistemological mechanisms that condition the construction of our thinking about reality
- ◆ Provide the student with the concepts and criteria indispensable for the critical analysis of our social representations
- ◆ Reinforce in the student the acquired competencies to carry out rational assessments and judgments in the service of growth and improvement in the quality of life of his community
- ◆ Highlight to students the need to build and disseminate the practice of discourse and critical thinking in those who join the sphere of responsible citizenship
- ◆ Offer the essential elements of judgment for the student to value the understanding of reality and its place in the community as a determining factor for the mental and physical health of people

YOUR

“

The most qualified teachers in the field of philosophy will be your professors in this Postgraduate Certificate. A unique opportunity to learn of Experience from the best”

International Guest Director

Dr. Alexander Carter is a philosopher who has served as Academic Director of Philosophy and Interdisciplinary Studies at the Institute of Continuing Education, University of Cambridge. A specialist in Ethics and creativity theory, he has designed several models for teaching these areas. He has also supervised undergraduate research programs at the Institute and is a Fellow of Fitzwilliam College, where he has helped develop curricular outlines for Philosophy. His main interests include the Philosophy of Wittgenstein, the Theology of Simone Weil, and the Epistemology of Humor.

Throughout his career, he has worked in prestigious institutions, where he has combined his research experience with new teaching methodologies. In fact, his approach has been developed at the University of Essex, where he has honed his ability to guide people through philosophical dilemmas, encouraging critical and creative thinking. With over a decade of experience, he has encouraged reading to adults of all ages, always promoting the value of philosophical reflection in everyday life.

Internationally, Dr. Alexander Carter has been recognized for his unique perspective on philosophy, based on the idea of “serious play”, in which he investigates the relationship between humor and creative practice. In addition, his ability to generate debate and dialogue has transformed the way philosophers and humanists think and act. Likewise, his Doctorate in Philosophy has consolidated his activism towards philosophy.

He has also conducted research on freedom and fatalism in Wittgenstein’s work, and has worked at the intersection of humor and creativity. He has published several academic articles and continues to be an influential voice in contemporary philosophy, bringing new perspectives to current debates.

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

“

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world"

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

The student will learn to solve complex situations in real business environments through collaborative activities and real cases.

A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

“*Our program prepares you to face new challenges in uncertain environments and achieve success in your career*”

The case method has been the most widely used learning system among the world's leading Humanities schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question we face in the case method, an action-oriented learning method. Throughout the program, the studies will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines 8 different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically. With this methodology we have trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, markets, and financial instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Practising Skills and Abilities

They will carry out activities to develop specific skills and abilities in each subject area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Case Studies

Students will complete a selection of the best case studies chosen specifically for this program. Cases that are presented, analyzed, and supervised by the best specialists in the world.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.
