Introduction

Teaching is a field of work where the updating and consolidation of knowledge must be constant. This is even more so if we are talking about teaching in Catholic Education, whose transmission of knowledge and values represents an extremely significant cultural and ethical content in the Christian message. In this context, this program is aimed at incorporating the necessary pedagogy to the teaching sessions, so that the Catholic religion subject can be taught to a group of students in an adapted and effective way. Hence the importance, as teachers, of receiving a specific and enabling didactic experience such as the one offered in this program. Therefore, you will become a true professional in Catholic education through the latest 100% online educational technology.

“

This Postgraduate Diploma is the best investment you can make in selecting a training program to delve into the paradigms and traditions of Catholic research"

Any person dedicated to teaching must have in-depth knowledge and an optimal understanding of the concepts in order to be able to transfer this wisdom and passion to their students. Therefore, it is essential to acquire a series of skills in knowledge, pedagogy and orientation of the teaching itself and to adapt it to the school cycle to be taught. Constant updating is part of the continuous personal and professional improvement, however even more so in a vocational field such as the Catholic Education Pedagogy. For this reason, TECH has designed a very complete program that covers the needs of the teacher, since it is not always enough to know the fundamentals of Catholic doctrine, but it is essential to incorporate didactic and pedagogical skills when teaching classes.

During this didactic journey, the students will find high quality multimedia materials, as well as complementary readings attached to each topic in order for the teacher to delve into the pedagogy of religion, connecting it with the people themselves and their education. All this theoretical content, with the added value provided by the practical content, will make the educators qualified to apply for prestigious positions in their field of work. Consequently, throughout the entire program, the teacher will be able to delve into issues such as the approach to the fundamentals of teaching Catholic religion, religious phenomenology and its philosophy, as well as the language of faith, key to building a grounded teaching proposal, of special relevance in the work of Catholic Pedagogy.

For all of the above reasons, and due to the demand for constant improvement that teaching entails, this program is the best investment a teacher can make to review all the essential contents, learning to present them from a more dynamic and efficient perspective, and to reach people of different ages and in different school cycles. Thanks to the 100% online methodology, you , can make your life compatible at the same time that you learn. Likewise, with supplementary materials, case studies and additional readings, you will acquire skills and competencies that will position you among the elite in your profession.

This **Postgraduate Diploma in Catholic Education Pedagogy** contains the most complete and up-to-date program on the market. The most important features include:

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

“

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world"

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

The student will learn to solve complex situations in real business environments through collaborative activities and real cases.

A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

“*Our program prepares you to face new challenges in uncertain environments and achieve success in your career”*

The case method has been the most widely used learning system among the world's leading Humanities schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question we face in the case method, an action-oriented learning method. Throughout the program, the studies will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines 8 different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically. With this methodology we have trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, markets, and financial instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Practising Skills and Abilities

They will carry out activities to develop specific skills and abilities in each subject area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Case Studies

Students will complete a selection of the best case studies chosen specifically for this program. Cases that are presented, analyzed, and supervised by the best specialists in the world.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.
