Introduction

The sacrament, as a symbolic expression of a fundamental situation, develops in the complexity of its triple character: as an interpersonal experience, the action of God and the ecclesial dimension. Knowing its symbolic characteristics and its importance in Christian dogma is essential for professionals to specialize in Religious Studies. This Postgraduate Diploma will take you through a complete educational journey that will allow you to understand the defining events and the situation at each development with its corresponding contextualization.

“

The sacraments are configured in theological knowledge, as the actualization and application of the mystery of Christ: an essential body of knowledge that this Postgraduate Diploma imparts with the depth of a specialization required for Religious Studies professionals”

The sacrament, due to its symbolic or representative reality, is a means of communication with God that incorporates numerous facets of symbolization of great transcendence in the understanding of the religious reality of the Catholic Church. This reality is where the transmission of Christ's redemptive nature resides, and is therefore the basis of Christian dogma.

In this Postgraduate Diploma, students will learn about the temporal rhythms and celebratory spaces of Christian liturgy, which will allow them to demonstrate the anthropological anchorage of the temporal rhythms and celebratory spaces of Christian liturgy and to have a specific consideration of the nature and importance of art in the liturgy.

By developing a focused global understanding of the subject, students will become familiar with the current cultural context of beliefs and scientific theories on the creation and origin of life, will be able to theologially develop a belief-based vision of God's creative action, of the Christian vision of human beings and of the mystery of sin, and will be able to create a dialogue between contemporary cosmological and anthropological visions.

Another area this Postgraduate Diploma covers is the theological characteristics that pursue the common good, in order to promote and contribute to a climate of justice and peace in society. Student will become familiar with the biblical, theological and magisterial tradition in order to understand the social reality in light of faith and to engage in argumentative debate on the various forms of social organization.

Student will recognize the fact of divine revelation, will be able to describe the historical, cultural and religious framework in which the divine revelatory action took place and show how the Holy Scripture presents the history of humanity in a linear sense and not as a cyclical process.

This **Postgraduate Diploma in Sacramentology** contains the most complete and up-to-date educational program on the market. Its most notable features are:

- ♦ Practical cases that apply the theoretical content through real life situations
- ♦ The graphic, schematic, and eminently practical content with which they are conceived
- ♦ The great variety of practical exercises where the self-evaluation process can be carried out to improve learning
- ♦ An algorithm-based interactive learning system that enables decision-making in the situations that are presented
- ♦ Its intensive focus on practical learning
- ♦ High quality theoretical lessons, with questions to the program, discussion forums on controversial topics and individual reflection work
- ♦ Content that is accessible from any fixed or portable device with an Internet connection

Acquire the foundational knowledge required to discuss liturgical practice and analyze both the plastic arts and sacred music used in the liturgy”

“

A specialization program created with the best educational materials in online specialization, which will become a process of professional growth of maximum interest to you”

The teaching staff includes professionals from the field of Theology and other related fields, who bring their experience to this program, as well as renowned specialists from leading scientific societies.

The multimedia content developed with the latest educational technology will provide students with situated and contextual learning, i.e., a simulated environment that will provide immersive learning programmed to learn in real situations.

This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise throughout the Postgraduate Diploma. For this purpose, professionals will be assisted by an innovative, interactive video system created by renowned and experienced experts in the Revealed Word of God who also have extensive teaching experience.

Study with the confidence that a high-quality educational institution provides, benefiting from the experience of the best experts and the convenience of a training program that adapts to your needs.

Develop your critical capacity to assess the social world in the light of faith and reflect ethically on social situations and institutions as well as social, economic or political systems.

02 Objectives

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

“

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world"

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

The student will learn to solve complex situations in real business environments through collaborative activities and real cases.

A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

“*Our program prepares you to face new challenges in uncertain environments and achieve success in your career*”

The case method has been the most widely used learning system among the world's leading Humanities schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question we face in the case method, an action-oriented learning method. Throughout the program, the studies will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines 8 different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically. With this methodology we have trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, markets, and financial instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Practising Skills and Abilities

They will carry out activities to develop specific skills and abilities in each subject area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Case Studies

Students will complete a selection of the best case studies chosen specifically for this program. Cases that are presented, analyzed, and supervised by the best specialists in the world.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.
