### tech 06 | Introduction

"I do not sing to be happy, I am happy because I sing", is how the American philosopher and psychologist William James summed up the therapeutic power of music at the beginning of the 20th century. And the fact is that this discipline has accompanied man throughout history, forming part of the most important events of each era. The projection of the voice as a form of expression has been taking a special relevance with the passage of time, becoming an authentic figure of art and becoming part of the catalog of activities that represent the cultural level of society. And the fact is that the various genres that can be interpreted through singing, as well as its use combined with other artistic expressions such as dance or theater, have opened a wide range of possibilities for those who possess this gift.

For this reason, TECH and its team of specialists in Musicology have decided to design a program through which those interested in this field can delve into it, either to work personally on the development of their own qualities, or to transmit them to their students. Thus arises the Postgraduate Diploma in Singing, a 6-month experience in which they can work with the most complete and innovative information related to choral singing, breathing techniques in different genres, the tools currently available to enhance the voice as a vehicle for musical expression and enjoyment, with the rules and regulations governing this artistic activity as a whole. They will also delve into the keys of the musical as a discipline with multiple outlets for lovers of interpretation and singing.

To achieve this, they will have 600 hours of theoretical, practical and additional content, the latter presented in different formats: detailed videos, research articles, complementary readings, self-knowledge exercises and much more. Everything will be hosted in a state-of-the-art virtual campus, which can be accessed from any device with an internet connection. In addition, all the content is downloadable, so that you can enjoy it even after the academic experience is over.

This **Postgraduate Diploma in Singing** contains the most complete and up-to-date program on the market. The most important features include:

- Practical cases presented by experts in Psychology
- The graphic, schematic and practical contents of the book provide technical and practical information on those disciplines that are essential for professional practice
- Practical exercises where self-assessment can be used to improve learning
- Its special emphasis on innovative methodologies
- Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- Content that is accessible from any fixed or portable device with an Internet connection

In addition to learning the best vocal strategies, you will work on dance techniques for comping performance, so that you can participate in various shows"

### Introduction | 07 tech

With self-knowledge exercises, you will be able to assess yourself and identify those areas where you need to put special emphasis. So that you can get the maximum benefit from this experience"

The program's teaching team includes professionals from the sector who contribute their work experience to this educational program, as well as renowned specialists from leading societies and prestigious universities.

The multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide immersive education programmed to learn in real situations.

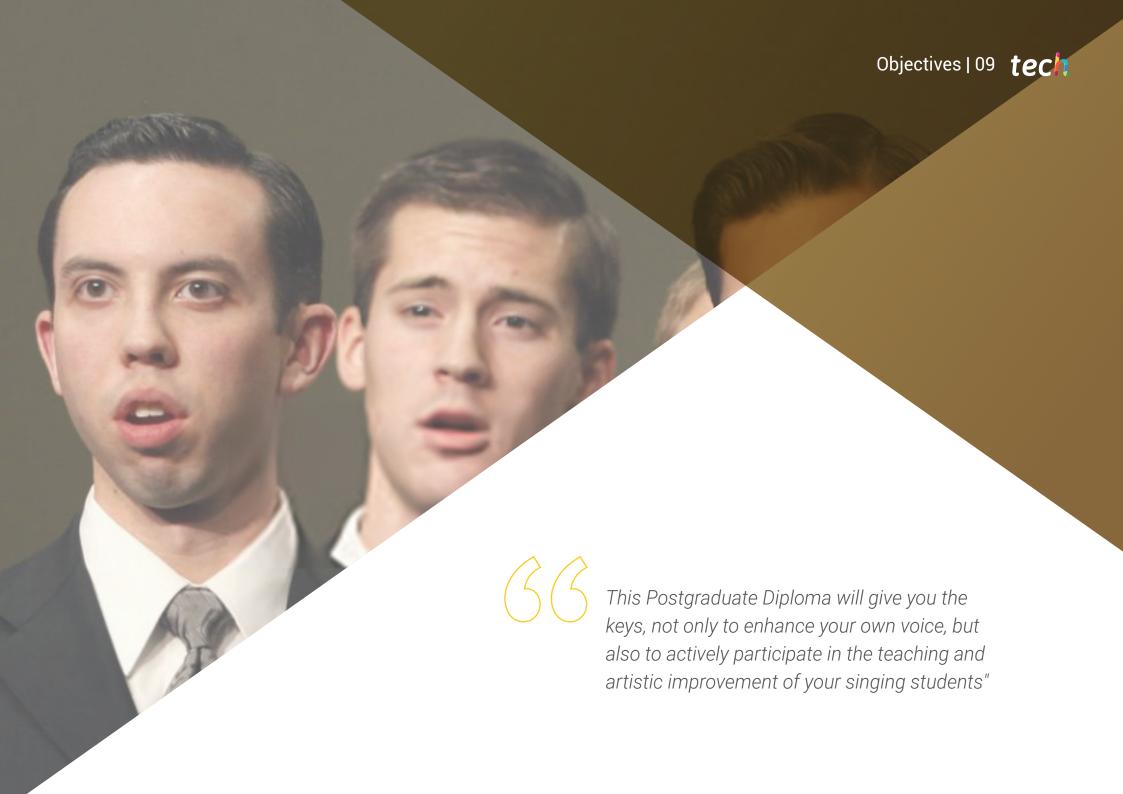

This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise during the academic year For this purpose, the student will be assisted by an innovative interactive video system created by renowned and experienced experts.

You will be able to perfect your skills in the use of the inner ear as the basis of intonation.

Detailed videos in each unit will help you to perfect your skills in harmonic hearing and musical interpretation.

### tech 10 | Objectives

### **General Objectives**

- Project a natural emission of the voice that avoids all kinds of tensions (corporal, psychic and social)
- Develop a specialized knowledge of the different vocal techniques currently available to enhance and care for the voice and its complex system
- Know in detail the different activities in which a professional singer can actively develop through the combined use of his voice with other disciplines such as dance

If you consider yourself a good singer and have always wanted to participate in a musical, this Postgraduate Diploma will allow you to develop the ability to coordinate dance with theater and singing voice"

A program with which you will work on self-control, memory control and communication skills to succeed on stage through the projection of your voice. Are you going to pass up the opportunity to get it?"

### tech 22 | Methodology

### Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world"

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

The student will learn to solve complex situations in real business environments through collaborative activities and real cases.

#### A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

Our program prepares you to face new challenges in uncertain environments and achieve success in your career"

The case method has been the most widely used learning system among the world's leading Humanities schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question we face in the case method, an action-oriented learning method. Throughout the program, the studies will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

### tech 24 | Methodology

### **Relearning Methodology**

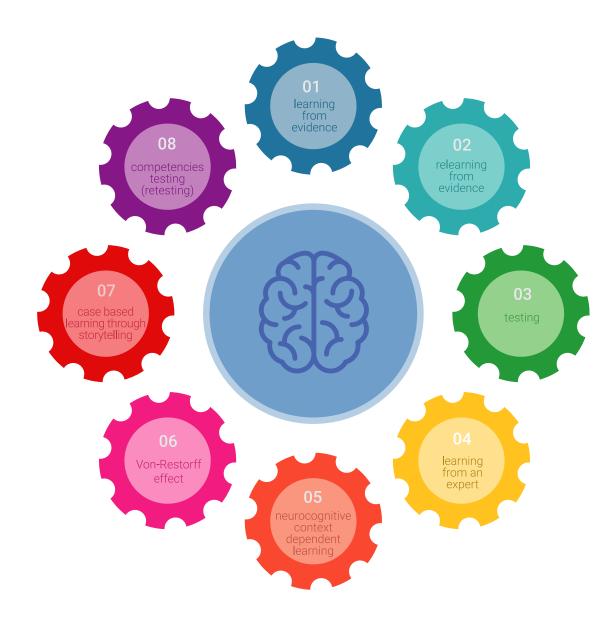

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines 8 different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

### Methodology | 25 tech

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically. With this methodology we have trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, markets, and financial instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

### This program offers the best educational material, prepared with professionals in mind:

#### **Study Material**

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

#### Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

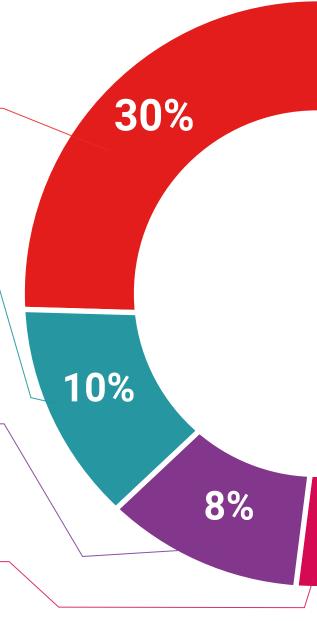

#### **Practising Skills and Abilities**

They will carry out activities to develop specific skills and abilities in each subject area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

#### **Additional Reading**

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

20%

#### **Case Studies**

Students will complete a selection of the best case studies chosen specifically for this program. Cases that are presented, analyzed, and supervised by the best specialists in the world.

**Interactive Summaries** 

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

#### **Testing & Retesting**

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.
