01

Introduction

Knowing electrical circuits is a fundamental task for IT professionals, since they are necessary for the creation of most telecommunications systems. This program brings students closer to the field of Circuit Analysis, with an up-to-date and high-quality program. It is a comprehensive program that seeks to prepare students for success in their profession.

“

This program is the best option you can find to specialize in Circuit Analysis”

Advances in telecommunications are happening all the time, as this is one of the fastest evolving areas. It is therefore necessary to have IT experts who can adapt to these changes and have first-hand knowledge of the new tools and techniques that are emerging in this field.

This Postgraduate Certificate in Circuit Analysis addresses the complete range of topics involved in this field. Its study has a clear advantage over other programs that focus on specific blocks, which prevents students from knowing the interrelation with other areas included in the multidisciplinary field of telecommunications. In addition, the teaching team of this educational program has made a careful selection of each of the topics of this program in order to offer students the most complete study opportunity possible and always linked to current events.

Learning to analyze circuits is the basis for knowing how to study and design other types of more complex systems. For this reason, this Postgraduate Certificate is essential for engineers specialized in information technology and telecommunications.

Specifically, in this program students will study electrical circuits with concentrated parameters, circuits in direct current regime, sinusoidal permanent regime and an introduction to the transient regime, as well as energy and power aspects in circuits, among other issues.

This program is aimed at those interested in attaining expert knowledge of Circuit Analysis. The main objective is for students to specialize their knowledge in simulated work environments and conditions in a rigorous and realistic manner so they can later apply it in the real world.

Additionally, as it is a 100% online program, the student is not constrained by fixed timetables or the need to move to another physical location, but can access the contents at any time of the day, balancing their professional or personal life with their academic life.

This **Postgraduate Certificate in Circuit Analysis** contains the most complete and up-to-date program on the market. The most important features include:

- ◆ The Development of practical case studies are presented by experts in Circuits analysis
- ◆ The graphic, schematic, and practical contents with which they are created, provide scientific and practical information on the disciplines that are essential for professional practice
- ◆ Practical exercises where self-assessment can be used to improve learning
- ◆ Special emphasis on innovative methodologies in Circuit Analysis
- ◆ Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ◆ Content that is accessible from any fixed or portable device with an Internet connection

Do not miss the opportunity to take this Postgraduate Certificate in Circuit Analysis with us. It's the perfect opportunity to advance your career"

“ *This Postgraduate Certificate is the best investment you can make when selecting a refresher program to update your knowledge in Circuit Analysis”*

This program comes with the best educational material, providing you with a contextual approach that will facilitate your learning.

This 100% online Postgraduate Certificate will allow you to combine your studies with your professional work. You choose where and when to study.

The teaching staff includes professionals from the field of design, who bring their experience to this specialization program, as well as renowned specialists from leading societies and prestigious universities.

The multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide immersive education programmed to learn in real situations.

This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise during the academic year. For this purpose, professionals will be assisted by an innovative interactive video system developed by renowned and experienced experts in Circuit Systems.

02 Objectives

The Postgraduate Certificate in Circuit Analysis is designed to facilitate professional performance in the field to acquire knowledge of the main developments in the sector.

A close-up photograph of a keyboard's internal mechanism, focusing on the gold-colored contacts of the keys. The image is partially obscured by a diagonal teal and white graphic overlay.

“

Our goal is to make you the best professional in your sector. For this, we have the best methodology and content"

General Objective

- ◆ Prepare students to be able to develop their work with total security and quality in the field of Circuit Systems

“*Specialize in the world's leading private Spanish-speaking online university*”

Specific Objectives

- ◆ Know the nature and behavior of electrical circuits.
- ◆ Master basic concepts
- ◆ Identify circuit components
- ◆ Understand and apply the different analysis methods
- ◆ Master the fundamental theorems of circuit theory
- ◆ Develop calculation skills

03

Structure and Content

The structure of this contents has been designed by the best professionals in the from the information technology sector, with extensive experience and recognized prestige in the profession

“

We have the most complete and up-to-date educational program on the market. We strive for excellence and for you to achieve it too”

Module 1. Circuit Analysis

- 1.1. Basic Concepts of Circuits
 - 1.1.1. Basic Components of Circuits
 - 1.1.2. Nodes, Branches and Meshes
 - 1.1.3. Resistance
 - 1.1.4. Capacitors
 - 1.1.5. Coils
- 1.2. Circuit Analysis Methods
 - 1.2.1. Kirchoff's Laws. Law of Currents: Nodal Analysis
 - 1.2.2. Kirchoff's Laws. Law of Tensions: Mesh Analysis
 - 1.2.3. Superposition Theorem
 - 1.2.4. Other Theorems of Interest
- 1.3. Sinusoidal Functions and Phasors
 - 1.3.1. Review of Sinusoidal Functions and their Characteristics
 - 1.3.2. Sinusoidal Functions as Circuit Excitation
 - 1.3.3. Phasor Definition
 - 1.3.4. Basic Phasor Operations
- 1.4. Analysis of Sinusoidal Steady-State Circuits. Effects of Passive Components Excited by Sinusoidal Functions
 - 1.4.1. Impedance and Admittance of Passive Components
 - 1.4.2. Sinusoidal Current and Voltage in Resistors
 - 1.4.3. Sinusoidal Current and Voltage in Capacitors
 - 1.4.4. Sinusoidal Current and Voltage in Coils
- 1.5. Sinusoidal Steady-State Power
 - 1.5.1. Definitions
 - 1.5.2. Effective Values
 - 1.5.3. Example 1 of Power Calculation
 - 1.5.4. Example 2 of Power Calculation
- 1.6. Generators
 - 1.6.1. Ideal Generators
 - 1.6.2. Real Generators
 - 1.6.3. Associations of Generators in Series Assembly
 - 1.6.4. Associations of Generators in Mixed Assembly

- 1.7. Topological Circuit Analysis
 - 1.7.1. Equivalent Circuits
 - 1.7.2. Thévenin Equivalent
 - 1.7.3. Continuous Steady-State Thévenin Equivalent
 - 1.7.4. Norton Equivalent
- 1.8. Fundamental Circuit Theorems
 - 1.8.1. Superposition Theorem
 - 1.8.2. Maximum Power Transfer Theorem
 - 1.8.3. Substitution Theorem
 - 1.8.4. Millman Theorem
 - 1.8.5. Reciprocity Theorem
- 1.9. Transformers and Coupled Circuits
 - 1.9.1. Introduction
 - 1.9.2. Iron Core Transformers: The Ideal Model
 - 1.9.3. Excessive Impedance
 - 1.9.4. Power Transformer Specifications
 - 1.9.5. Transformer Applications
 - 1.9.6. Practical Iron-Core Transformers
 - 1.9.7. Transformer Testing
 - 1.9.8. Voltage and Frequency Effects
 - 1.9.9. Weakly Coupled Circuits
 - 1.9.10. Magnetically Coupled Circuits with Sinusoidal Excitation
 - 1.9.11. Coupled Impedance
- 1.10. Transient Phenomena Analysis in Circuits
 - 1.10.1. Calculation of Instantaneous Current and Voltage in Passive Components
 - 1.10.2. One Order Circuits in Transient Regime
 - 1.10.3. Second Order Circuits in Transient Regime
 - 1.10.4. Resonance and Frequency Effects: Filtering

04

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

“

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world”

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

“*Our program prepares you to face new challenges in uncertain environments and achieve success in your career”*

The student will learn to solve complex situations in real business environments through collaborative activities and real cases.

The case method has been the most widely used learning system among the world's leading Information Technology schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question that you are presented with in the case method, an action-oriented learning method. Throughout the course, students will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH, you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

This methodology has trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, and financial markets and instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then adapted in audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high-quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Practising Skills and Abilities

They will carry out activities to develop specific competencies and skills in each thematic area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Case Studies

Students will complete a selection of the best case studies chosen specifically for this program. Cases that are presented, analyzed, and supervised by the best specialists in the world.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

05 Certificate

This Postgraduate Certificate in Circuit Analysis guarantees students, in addition to the most rigorous and up-to-date education, access to a Postgraduate Certificate issued by TECH Technological University.

“

Successfully complete this program and receive your university qualification without having to travel or fill out laborious paperwork”

This **Postgraduate Certificate in Circuit Analysis** contains the most complete and up-to-date academic program the market.

After the student has passed the assessments, they will receive their corresponding **Postgraduate Certificate** issued by **TECH Technological University** via tracked delivery*.

The diploma issued by **TECH Technological University** will reflect the qualification obtained in the Postgraduate Certificate, and meets the requirements commonly demanded by labor exchanges, competitive examinations and professional career evaluation committees.

Title: **Postgraduate Certificate in Circuit Analysis**

Official N° of Hours: **150 h.**

*Apostille Convention. In the event that the student wishes to have their paper diploma issued with an apostille, TECH EDUCATION will make the necessary arrangements to obtain it, at an additional cost.
