01

Introduction

Learning the fundamentals of computer design and evolution, including parallel architectures and levels of parallelism, is essential for any computer engineering professional. With this program, students will update their knowledge and learn about the latest developments in the field from experts in the sector.

“

This program will allow you to update your knowledge in Computer Structure in a practical way, 100% online, without renouncing to the maximum academic rigor”

This program is aimed at those people interested in reaching a higher level of knowledge in Computer Structure. The main objective is to enable the student to apply in the real world the knowledge acquired in this course, in a work environment that reproduces the conditions that may be encountered in the future, in a rigorous and realistic manner.

The program will prepare students for the professional practice of computer engineering, thanks to a transversal and versatile training adapted to new technologies and innovations in this field. You will obtain extensive knowledge in Computer Structure, from the hand of professionals in the sector.

The students will be able to take the opportunity and study this program in a 100% online format, without neglecting their obligations.

This **Postgraduate Certificate in Computer Structure** contains the most complete and up-to-date program on the market. The most important features include:

- ◆ Development of 100 simulated scenarios presented by experts in Computer Structure
- ◆ Its graphic, schematic and eminently practical contents provide scientific and practical information on the Computer Structure
- ◆ News on the latest developments in Computer Structure
- ◆ It contains practical exercises where the self-assessment process can be carried out to improve learning
- ◆ Interactive learning system based on the case method and its application to real practice
- ◆ All of this will be complemented by theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ◆ Content that is accessible from any fixed or portable device with an Internet connection

Learn the latest techniques and strategies with this program and achieve success as a computer engineer"

“ *Get trained in Computer Structure with this intensive program, from the comfort of your home*”

Take advantage of the latest educational technology to get up to date in Computer Structure without leaving home.

Learn about the latest techniques in Computer Structure from experts in the field.

It includes in its teaching staff professionals belonging to the field of education, who bring to this program their work experience, in addition to recognized specialists belonging to reference societies and prestigious universities.

Thanks to its multimedia content elaborated with the latest educational technology, this program will allow the professional a situated and contextual learning, that is to say, a simulated environment that will provide an immersive learning programmed to work in real situations.

This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise throughout the program. For this purpose, the professional will be assisted by an innovative interactive video system created by renowned experts in Computer Structure with extensive teaching experience.

02 Objectives

The objective of this training is to provide IT professionals with the knowledge and skills necessary to perform their activity using the most advanced protocols and techniques available. Through a work approach that is fully adaptable to the student, this program will progressively lead the student to acquire the competencies that will propel them to a higher professional level.

“

Achieve the level of knowledge you desire and master the fundamental concepts in Computer Structure with this high-level training"

General Objectives

- ◆ Prepare scientifically and technologically, as well as to develop the professional practice of software engineering, with a transversal and versatile approach adapted to the new technologies and innovations in this field
- ◆ Obtain extensive knowledge in the field of computation, computer structure and Computer Structure, including the mathematical, statistical and physical basis essential in engineering

“

Take the opportunity to learn about the latest advances in this field in order to apply it to your daily practice"

Specific objectives

- ◆ Learn the fundamentals of computer design and evolution, including parallel architectures and levels of parallelism
- ◆ Understand how different ways of assessing the performance of a computer work, as well as the use of performance testing programs
- ◆ Understand the operation of the memory hierarchy, the different types of storage and input/output issues
- ◆ Learn the characteristics of the different types of processors, such as segmented, superscalar, VLIW and vector processors
- ◆ Understand the operation of parallel computers, their motivation, performance and architecture
- ◆ Know the characteristics of computer interconnection networks and of multiprocessors

03

Structure and Content

The structure of the contents has been designed by a team of computer engineering professionals, aware of the relevance of current training in order to deepen this area of knowledge in order to humanistically enrich the student and raise the level of knowledge in Computer Structure through the latest educational technologies available.

“

This study of Computer Structure contains the most complete and up-to-date learning program on the market"

Module 1. Computer Structure

- 1.1. Fundamentals of Computer Design and Evolution
 - 1.1.1. Definition of Computer Architecture
 - 1.1.2. Evolution and Performance of Architectures
 - 1.1.3. Parallel Architectures and Levels of Parallelism
- 1.2. Computer Performance Evaluation
 - 1.2.1. Performance Measures
 - 1.2.2. Test Programs (Benchmarks)
 - 1.2.3. Improved Performance
 - 1.2.4. Costs of a Computer
- 1.3. Leveraging the Memory Hierarchy
 - 1.3.1. Memory Hierarchy
 - 1.3.2. Basic Concepts of the Cache
 - 1.3.3. Cache Evaluation and Improvements
 - 1.3.4. Virtual Memory
- 1.4. Storage and Other Input/Output Aspects
 - 1.4.1. Reliability, Dependability and Availability
 - 1.4.2. Disk Storage
 - 1.4.3. Flash Storage
 - 1.4.4. Connection and Information Transfer Systems
- 1.5. Segmented Processors
 - 1.5.1. What are Segmented Processors?
 - 1.5.2. Principles of Segmentation and Performance Enhancement
 - 1.5.3. Segmented Processor Design
 - 1.5.4. Optimization of Functional Channels
 - 1.5.5. Interrupt Handling on a Segmented Processor
- 1.6. Superscalar Processors
 - 1.6.1. What are Superscalar Processors?
 - 1.6.2. Parallelism between Instructions and Machine Parallelism
 - 1.6.3. Superscalar Instruction Processing
 - 1.6.4. Jump Instruction Processing
 - 1.6.5. Interrupt Handling on a Superscalar Processor

- 1.7. VLIW Processors
 - 1.7.1. What are VLIW Processors?
 - 1.7.2. Exploiting Parallelism in VLIW Architectures
 - 1.7.3. Compiler Support Resources
- 1.8. Vector Processors
 - 1.8.1. What are Vector Processors?
 - 1.8.2. Vector Architecture
 - 1.8.3. The Memory System in Vector Processors
 - 1.8.4. Performance Measurements on Vector Processors
 - 1.8.5. Vector Processing Efficiency
- 1.9. Parallel Computers
 - 1.9.1. Parallel Architectures and Levels of Parallelism
 - 1.9.2. Motivation to the Study of Parallel Computers
 - 1.9.3. Design Space, Classification and General Structure
 - 1.9.4. Performance on Parallel Computers
 - 1.9.5. Classification of Communication Systems in Parallel Computers
 - 1.9.6. General Structure of the Communication System in Parallel Computers
 - 1.9.7. The Network Interface in Parallel Computers
 - 1.9.8. The Interconnection Network in Parallel Computers
 - 1.9.9. Communication System Performance on Parallel Computers
- 1.10. Interconnection Networks and Multiprocessors
 - 1.10.1. Topology and Types of Interconnection Networks
 - 1.10.2. Switching in Interconnection Networks
 - 1.10.3. Flow Control in Interconnection Networks
 - 1.10.4. Routing in Interconnection Networks
 - 1.10.5. Memory System Coherence on Multiprocessors
 - 1.10.6. Multiprocessor Memory Consistency
 - 1.10.7. Multiprocessor Synchronization

04

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

“

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world”

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

The student will learn to solve complex situations in real business environments through collaborative activities and real cases.

A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

“*Our program prepares you to face new challenges in uncertain environments and achieve success in your career”*

The case method has been the most widely used learning system among the world's leading Information Technology schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question that you are presented with in the case method, an action-oriented learning method. Throughout the course, students will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

This methodology has trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, and financial markets and instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Practising Skills and Abilities

They will carry out activities to develop specific skills and abilities in each subject area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Case Studies

Students will complete a selection of the best case studies chosen specifically for this program. Cases that are presented, analyzed, and supervised by the best specialists in the world.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

05 Certificate

The Postgraduate Certificate in Computer Structure guarantees students, in addition to the most rigorous and up-to-date education, access to a Postgraduate Certificate issued by TECH Technological University.

“

Successfully complete this program and receive your university qualification without having to travel or fill out laborious paperwork”

This **Postgraduate Certificate in Computer Structure** contains the most complete and up-to-date program on the market.

After the student has passed the assessments, they will receive their corresponding **Postgraduate Certificate** issued by **TECH Technological University** via tracked delivery*.

The diploma issued by **TECH Technological University** will reflect the qualification obtained in the Postgraduate Certificate, and meets the requirements commonly demanded by labor exchanges, competitive examinations, and professional career evaluation committees.

Title: **Postgraduate Certificate in Computer Structure**

Official N° of Hours: **150 h.**

*Apostille Convention. In the event that the student wishes to have their paper diploma issued with an apostille, TECH EDUCATION will make the necessary arrangements to obtain it, at an additional cost.
