Introduction

Mobile networks have experienced great progress since their inception, enabling better connections in terms of quality and performance. This program brings students closer to this field, with an up-to-date and quality program. It is a comprehensive education that seeks to prepare students for success in their profession.

“

If you are looking for a quality Postgraduate Certificate that will help you start working in in one of the most promising professional fields, this is your best option”

Advances in telecommunications are happening all the time, as this is one of the fastest evolving areas. It is therefore necessary to have IT experts who can adapt to these changes and have first-hand knowledge of the new tools and techniques that are emerging in this field.

This Postgraduate Certificate in Mobile Communication Networks addresses the complete range of topics involved in this field. Its study has a clear advantage over other programs that focus on specific blocks, which prevents students from knowing the interrelation with other areas included in the multidisciplinary field of telecommunications. In addition, the teaching team of this educational program has made a careful selection of each of the topics of this program in order to offer students the most complete study opportunity possible and always linked to current events.

The educational program offers an in-depth knowledge of everything related to mobile communication networks, from protocols and architecture, the principles of mobile communications, GSM networks, or UMTS systems, among other aspects related to this field that aim to prepare professionals for their daily work.

This Postgraduate Certificate is aimed at those interested in achieving a higher level of knowledge in Mobile Communication Networks. The main objective is to enable students to apply the knowledge acquired in this Postgraduate Certificate in the real world, in a work environment that reproduces the conditions that may be found in their future, in a rigorous and realistic way, user identification and biometric systems, cryptography, or security in Internet services, among other aspects.

Additionally, as it is a 100% online program, the student is not constrained by fixed timetables or the need to move to another physical location, but can access the contents at any time of the day, balancing their professional or personal life with their academic life.

This **Postgraduate Certificate in Mobile Communication Networks** contains the most complete and up-to-date program on the market. The most important features include:

- ◆ Development of case studies presented by experts in Mobile Communication Networks
- ◆ The graphic, schematic, and practical contents with which they are created, provide scientific and practical information on the disciplines that are essential for professional practice
- ◆ Practical exercises where self-assessment can be used to improve learning
- ◆ Its special emphasis on innovative methodologies in Mobile Communication Networks
- ◆ Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ◆ Content that is accessible from any fixed or portable device with an Internet connection

Don't miss the opportunity to study this Postgraduate Certificate in Mobile Communication Networks with TECH. It's the perfect opportunity to advance your career"

“ *This Postgraduate Certificate is the best investment you can make when selecting a refresher program to update your knowledge of Mobile Communication Networks*”

The teaching staff includes professionals from the field of information technology, who bring their experience to this specialization program, as well as renowned specialists from leading societies and prestigious universities.

The multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide immersive education programmed to learn in real situations.

This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise during the academic year. For this purpose, professionals will be assisted by an innovative interactive video system developed by renowned and experienced experts in Mobile Communication Networks.

This program comes with the best educational material, providing you with a contextual approach that will facilitate your learning.

This 100% online Postgraduate Certificate will allow you to combine your studies with your professional work.

02 Objectives

The Postgraduate Certificate in Mobile Communication Networks is designed to facilitate professional performance in the field to acquire knowledge of the main developments in the sector.

“

Our goal is for you to become the best professional in your sector. For this, we have the best methodology and content”

General Objective

- ◆ Prepare students to be able to develop their work with total confidence and quality in the field of telecommunications, focused on Mobile Communication Networks

“*Specialize in the world's leading private Spanish-speaking online university*”

Specific Objectives

- ◆ Analyze the fundamental concepts of mobile communications networks
- ◆ Know the principles of mobile communications
- ◆ Master architecture and protocols of mobile communications networks
- ◆ Understand the basic technologies used in GSM, UMTS and LTE networks
- ◆ Understand the signaling systems and the different network protocols of GSM, UMTS and LTE networks
- ◆ Understand the functional entities of GSM, UMTS and LTE and their interconnection with other networks

03

Structure and Content

The structure of the contents has been designed by the best professionals in the from the engineering sector, with extensive experience and recognized prestige in the profession

“

We have the most complete and up-to-date educational program on the market. We strive for excellence and for you to achieve it too”

Module 1. Mobile Communication Networks

- 1.1. Introduction Mobile Communication Networks
 - 1.1.1. Communication Networks
 - 1.1.2. Communication Network Classification
 - 1.1.3. Radioelectric Spectrum
 - 1.1.4. Radio Telephone Systems
 - 1.1.5. Cellular Technology
 - 1.1.6. Evolution of Mobile Telephone Systems
- 1.2. Protocols and Architecture
 - 1.2.1. Protocol Concept Review
 - 1.2.2. Communication Architecture Concept Review
 - 1.2.3. OSI Model Review
 - 1.2.4. TCP/IP Protocol Architecture Review
 - 1.2.5. Mobile Telephone Network Structure
- 1.3. Mobile Communication Principles
 - 1.3.1. Radiation and Antenna Types
 - 1.3.2. Frequency Reuse
 - 1.3.3. Signal Propagation
 - 1.3.4. Itinerancy and Transfer
 - 1.3.5. Multiple Access Techniques
 - 1.3.6. Analog and Digital Systems
 - 1.3.7. Portability
- 1.4. GSM Network Review: Technical Characteristics, Architecture and Interfaces
 - 1.4.1. GSM Systems
 - 1.4.2. GSM Technical Characteristics
 - 1.4.3. GSM Network Architecture
 - 1.4.4. GSM Channel Structure
 - 1.4.5. GSM Interfaces
- 1.5. GSM and GPRS Protocol Review
 - 1.5.1. Introduction
 - 1.5.2. GSM Protocols
 - 1.5.3. GSM Evolution
 - 1.5.4. GPRS

- 1.6. UMTS System; Technical Characteristics, Architecture and HSPA
 - 1.6.1. Introduction
 - 1.6.2. UMTS Systems
 - 1.6.3. UMTS Technical Characteristics
 - 1.6.4. UMTS Network Architecture
 - 1.6.5. HSPA
- 1.7. UMTS System. Protocols, Interfaces and VoIP
 - 1.7.1. Introduction
 - 1.7.2. UMTS Channel Structure
 - 1.7.3. UMTS Protocols
 - 1.7.4. UMTS Interfaces
 - 1.7.5. VoIP and IMS
- 1.8. VoIP: Traffic Models for IP Telephony
 - 1.8.1. VoIP Introduction
 - 1.8.2. Protocols
 - 1.8.3. VoIP Elements
 - 1.8.4. Real-Time VoIP Transport
 - 1.8.5. Packaged Voice Traffic Models
- 1.9. LTE System. Technical Characteristics and Architecture. CS Fallback
 - 1.9.1. LTE Systems
 - 1.9.2. LTE Technical Characteristics
 - 1.9.3. LTE Network Architecture
 - 1.9.4. LTE Channel Structure
 - 1.9.5. LTE Calls: VoLGA, CS FB and VoLTE
- 1.10. LTE Systems: Interfaces, Protocols and Services
 - 1.10.1. Introduction
 - 1.10.2. LTE Interfaces
 - 1.10.3. LTE Protocols
 - 1.10.4. LTE Services

04 Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

“

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world”

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

“*Our program prepares you to face new challenges in uncertain environments and achieve success in your career”*

The student will learn to solve complex situations in real business environments through collaborative activities and real cases.

The case method has been the most widely used learning system among the world's leading Information Technology schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question that you are presented with in the case method, an action-oriented learning method. Throughout the course, students will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH, you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

This methodology has trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, and financial markets and instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then adapted in audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high-quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Practising Skills and Abilities

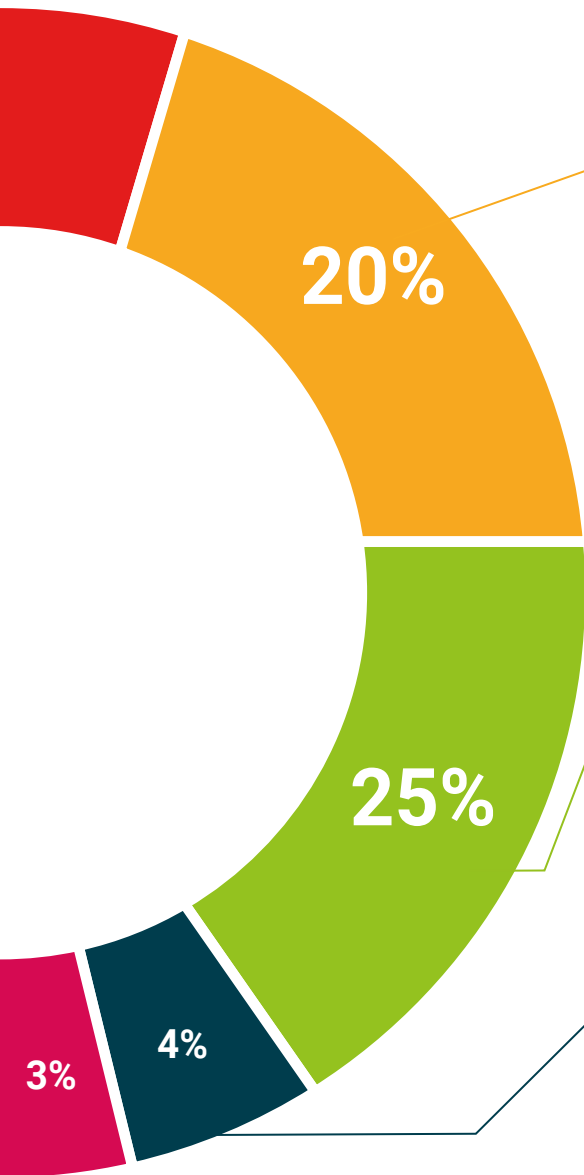

They will carry out activities to develop specific competencies and skills in each thematic area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Case Studies

Students will complete a selection of the best case studies chosen specifically for this program. Cases that are presented, analyzed, and supervised by the best specialists in the world.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

05 Certificate

The Postgraduate Certificate in Mobile Communication Networks guarantees students, in addition to the most rigorous and up-to-date education, access to a Postgraduate Certificate issued by TECH Technological University.

“

Successfully complete this program and receive your university qualification without having to travel or fill out laborious paperwork”

This **Postgraduate Certificate in Mobile Communication Networks** contains the most complete and up-to-date educational program on the market.

After the student has passed the assessments, they will receive their corresponding **Postgraduate Certificate** issued by **TECH Technological University** via tracked delivery*.

The diploma issued by **TECH Technological University** will reflect the qualification obtained in the Postgraduate Certificate, and meets the requirements commonly demanded by labor exchanges, competitive examinations and professional career evaluation committees.

Title: **Postgraduate Certificate in Mobile Communication Networks**

Official N° of Hours: **150 h.**

*Apostille Convention. In the event that the student wishes to have their paper diploma issued with an apostille, TECH EDUCATION will make the necessary arrangements to obtain it, at an additional cost.
