01

Introduction

Training and specializing in quantum computing is a winning bet. It is today and will undoubtedly be even more so in the future. Quantum theory can be theoretically applied to various sciences and factors, such as artificial intelligence, cryptography, cybersecurity, machine learning, *Blockchain*, error correction, IoT, biotechnology, medicine and countless other areas. This 100% online degree It addresses quantum computing, in an understandable, simple , and friendly way, in order to get into what is undoubtedly the future of computer science in the coming years.

Those who acquire knowledge now in quantum technologies will be the leaders in programming in the near-term future"

Quantum computing has advanced rapidly in both theory and practice in recent years and with it the hope of potential impact on real applications. Quantum computers are able to naturally solve certain problems with complex correlations between inputs that can be incredibly difficult for traditional computers. This Postgraduate Certificate Analyzes in which situations a quantum advantage could be achieved ", in the context of advanced analytics and artificial intelligence in the industrial field."

Learning models developed on quantum computers are much more powerful for applications in the search for an optimal solution, both at the level of the best selection of hyperparameters in machine learning algorithms, as well as in cases of scenario optimization. This is because they allow much faster computation, better generalization with less data, or both. Those the computer scientists who acquire knowledge now in quantum technologies will be the leaders in programming in the near-term future."

Additionally, the student has the best study methodology 100% online, which eliminates the need to attend classes in person or have to comply with a predetermined schedule. To this end, in only 6 weeks will delve into the scope of application of Quantum Computing, understanding the competitive advantages they provide, so they will be positioned at the technological forefront and will be able to lead ambitious projects in the present and in the future.

This **Postgraduate Certificate in Quantum Computing** contains the most complete and up-to-date program on the market. The most important features include:

- The development of case studies presented by experts in Computing quantum
- The graphic, schematic, and practical contents with which they are created, provide practical information on the disciplines that are essential for professional practice
- Practical exercises where self-assessment can be used to improve learning.
- Its special emphasis on innovative methodologies
- Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- Content that is accessible from any fixed or portable device with an Internet connection

A historic technological revolution associated with the development of new quantum platforms is underway"

Quantum sensors and actuators will enable computer scientists to navigate the nanoscale world with remarkable precision and sensitivity"

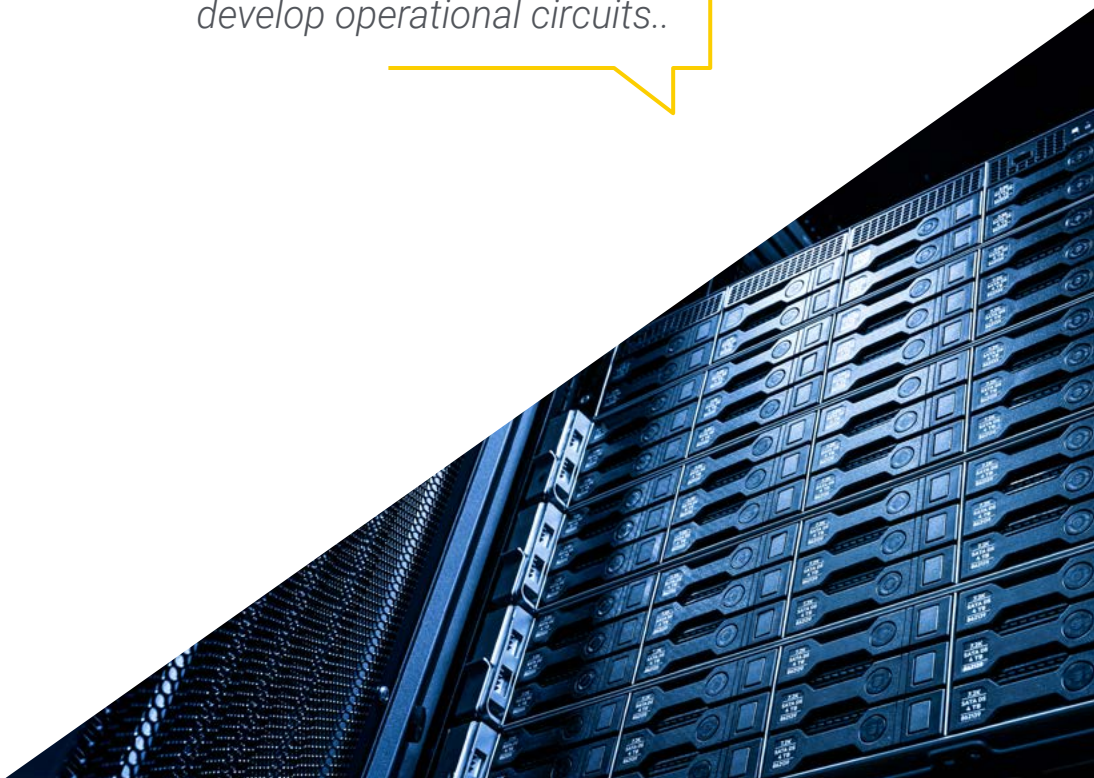
The quantum revolution is already underway, and the possibilities ahead of you are limitless.

Determine the main quantum operators and develop operational circuits..

The program's teaching staff includes professionals from the sector who contribute their work experience to this educational program, as well as renowned specialists from leading societies and prestigious universities.

Its multimedia content, developed with the latest educational technology, will allow professionals to learn in a contextual and situated learning environment, i.e., a simulated environment that will provide immersive education programmed to prepare in real situations.

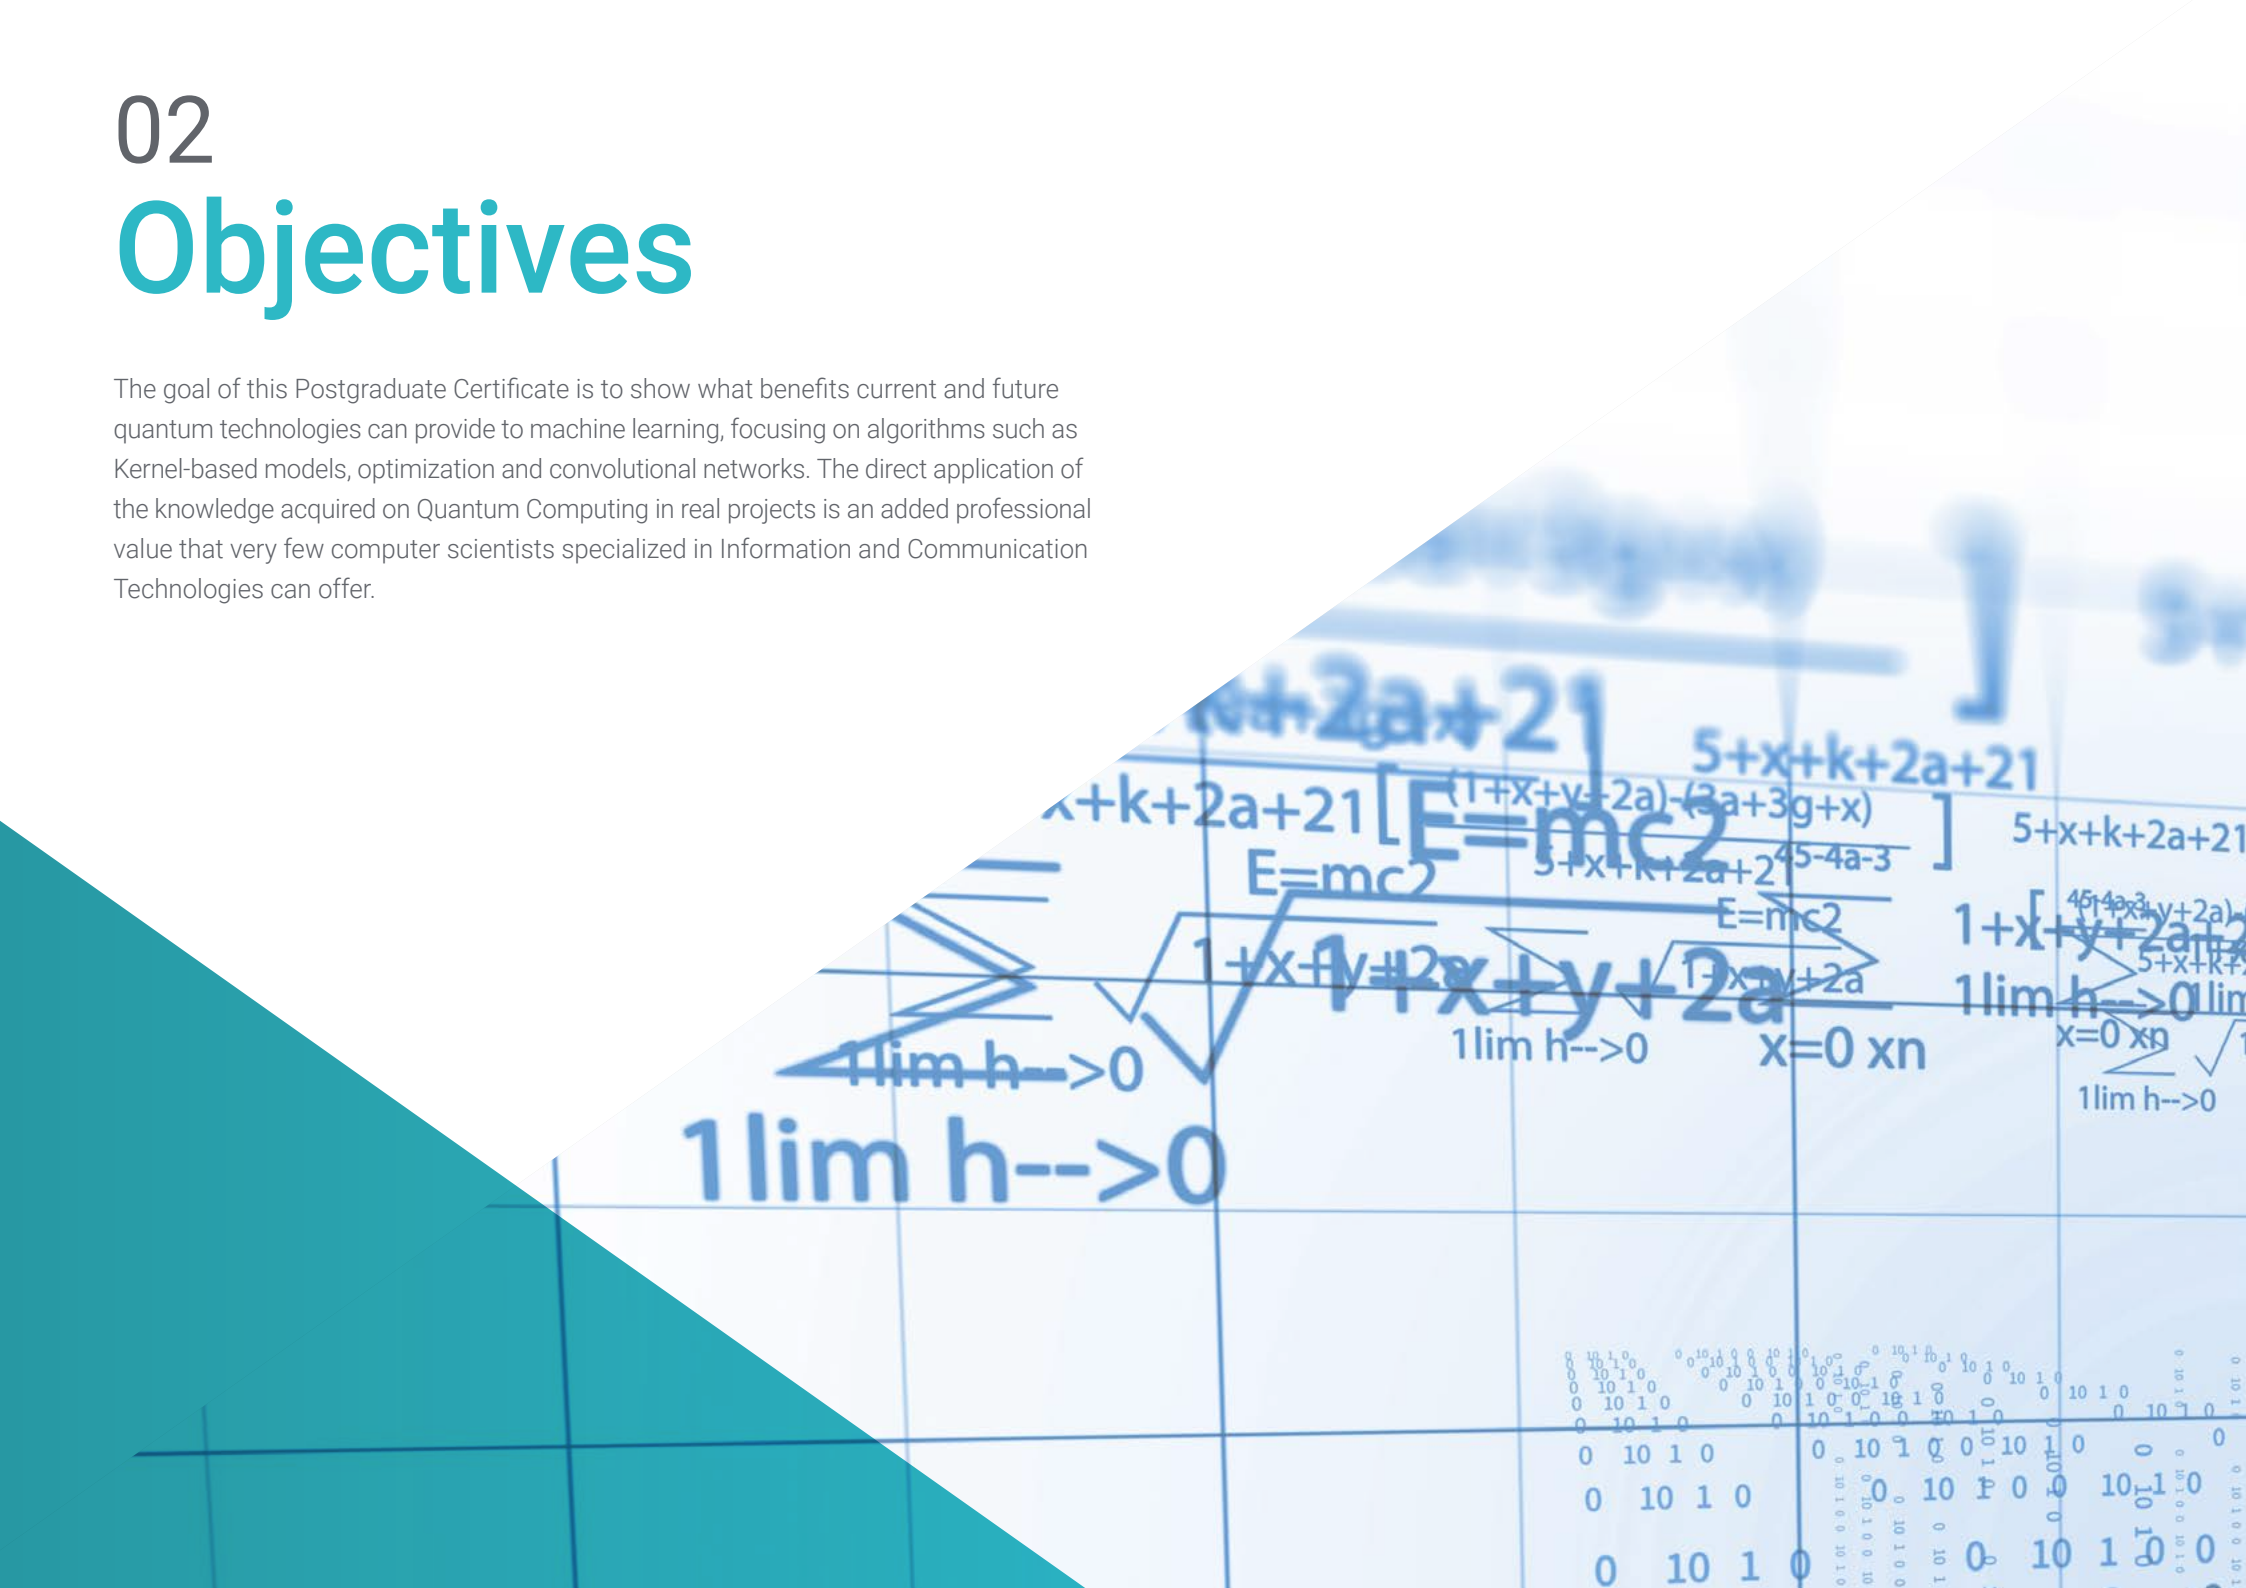
The design of this program focuses on Problem-Based Learning, by means of which professionals must try to solve the different professional practice situations that arise during the academic course. For this purpose, the student will be assisted by an innovative interactive video system created by renowned and experienced experts.



02

Objectives

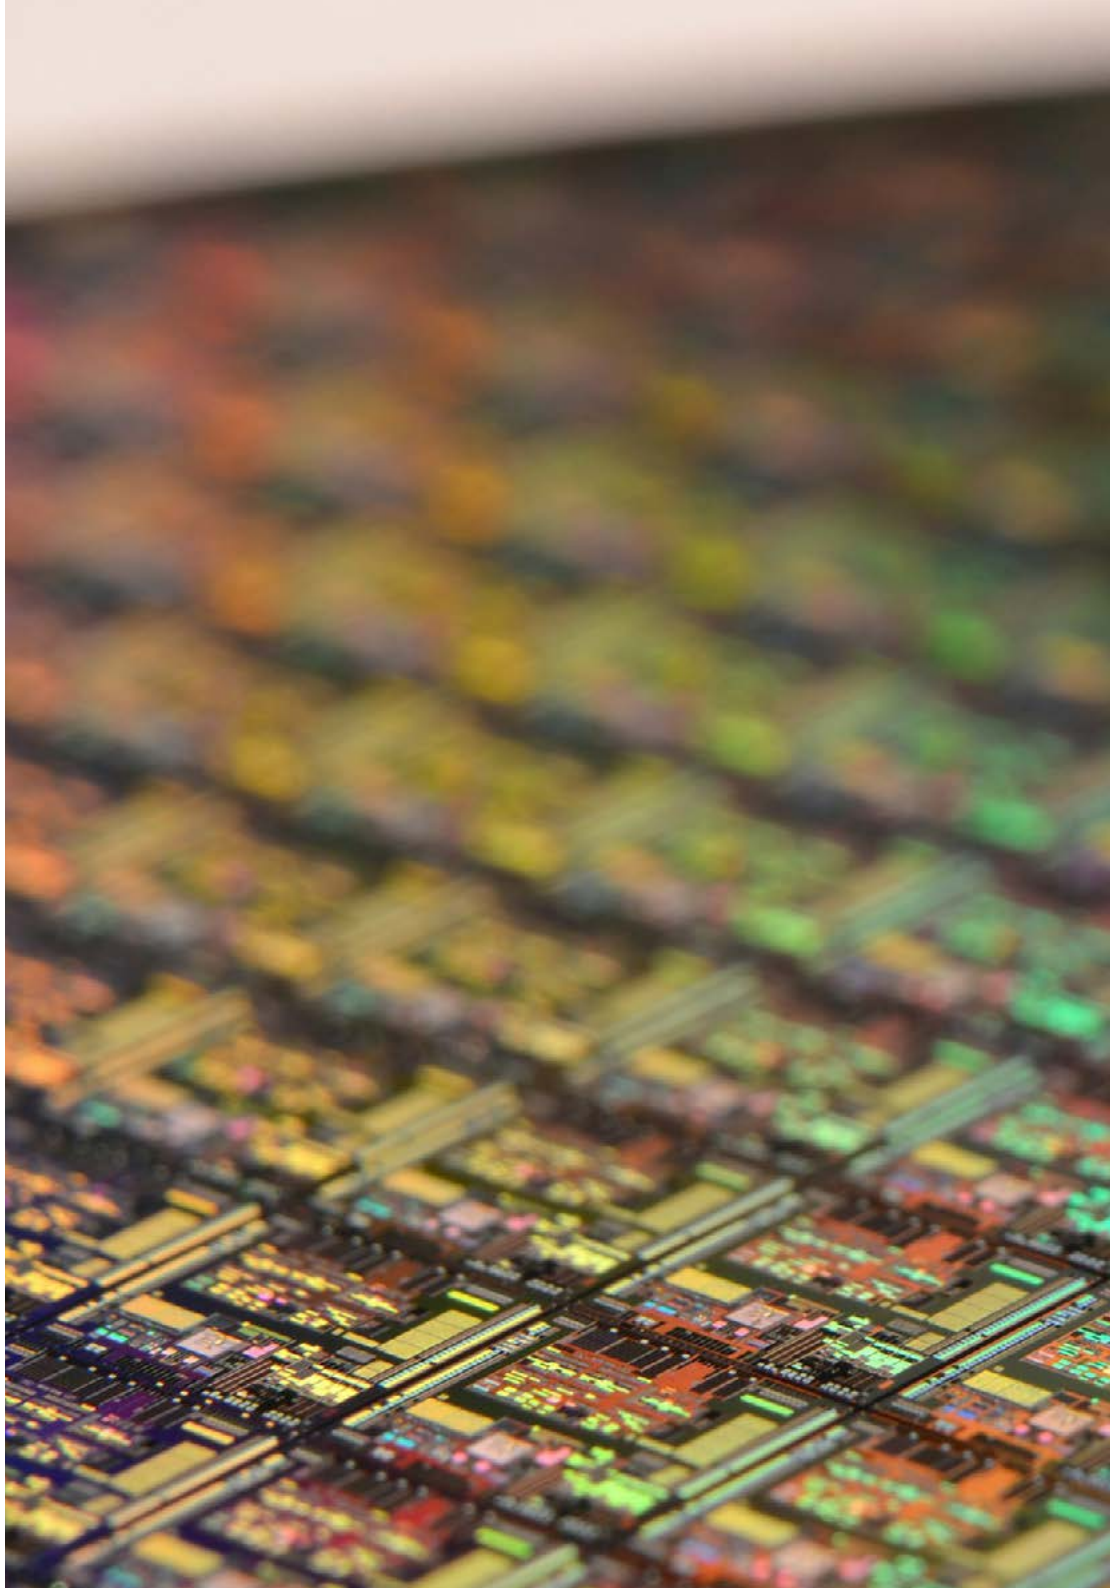
The goal of this Postgraduate Certificate is to show what benefits current and future quantum technologies can provide to machine learning, focusing on algorithms such as Kernel-based models, optimization and convolutional networks. The direct application of the knowledge acquired on Quantum Computing in real projects is an added professional value that very few computer scientists specialized in Information and Communication Technologies can offer.

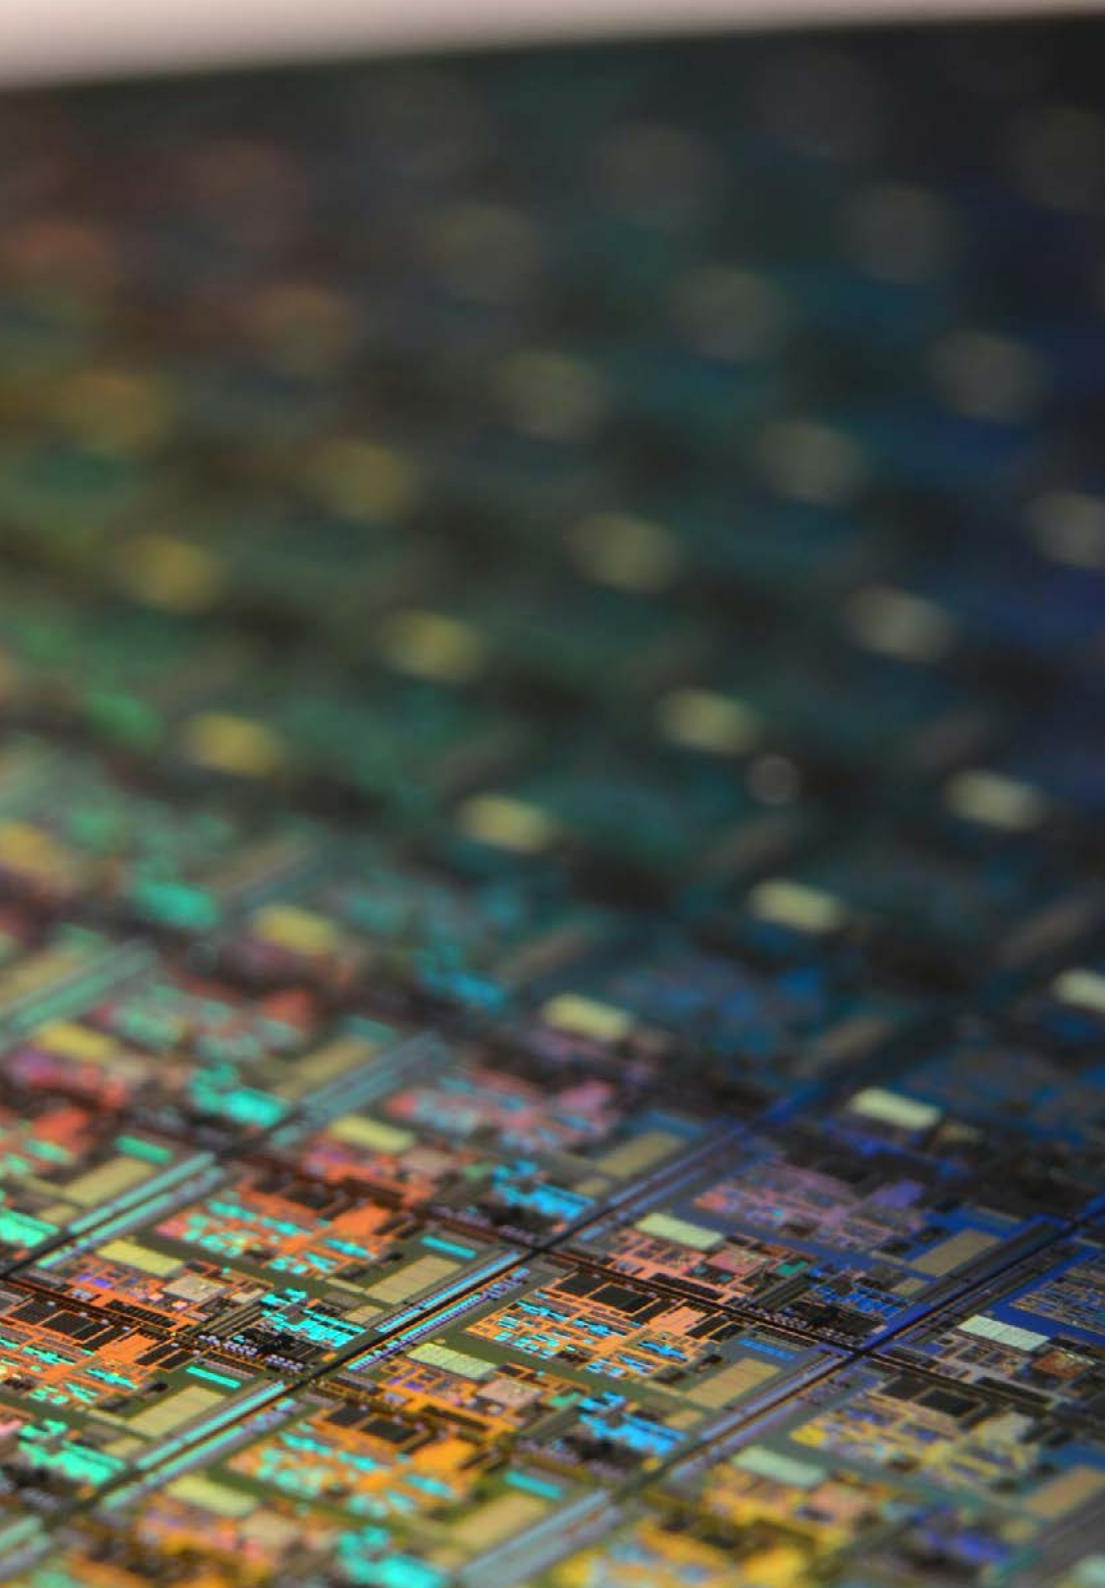


Examines the applications of Quantum Computing, its pros and cons, to find out in which situations a quantum advantage could be achieved"

General Objectives

- Demonstrate the differences between quantum computing and classical computing.
- Analyze the mathematical foundations of quantum computing.
- Determine the main quantum operators and develop operational quantum circuits.
- Analyze the advantages of quantum computing in examples of quantum "type" problem solving.
- Develop and demonstrate the advantages of quantum computing in application solving examples (games, examples, programs)
- Demonstrate the different types of projects achievable with classical *Machine Learning* techniques and the state of the art in quantum computing.
- Develop the key concepts of quantum states as a generalization of classical probability distributions, and thus to be , able to describe quantum systems of many states
- Analyze how to encode classical information in quantum systems.
- Determine the concept of "Kernel Methods" used in classic *Machine Learning* algorithms.
- Develop and implement learning algorithms for classical ML models in quantum models, such as PCA, SVM, neural networks, etc.
- Implement DL model learning algorithms on quantum models, such as GANs





Specific Objectives

- Analyze the need for quantum computing and identify the different types of quantum computers currently available.
- Specify the fundamentals of quantum computing and its characteristics.
- Examine the applications of quantum computing, advantages and disadvantages.
- Determine the basic fundamentals of quantum algorithms and their internal mathematics.
- Examine Hilbert space of dimension 2n, n-Qubits, states, quantum gates and their reversibility.
- Demonstrating Quantum Teleportation
- Analyze Deutsch's Algorithm, Shor's Algorithm and Grover's Algorithm.
- Develop examples of applications with quantum algorithms.
- Analyze quantum computing paradigms relevant to machine learning.
- Examine the various ML algorithms available in quantum computing, both supervised and unsupervised
- Determine the different DL algorithms available in quantum computing.
- Understand the use of the quantum Fourier Transform in indicator integration for quantum ML models, as well as for feature selection.
- Develop pure quantum algorithms for solving optimization problems optimization problems
- Generate specialized knowledge on hybrid algorithms to solve learning problems.

Analyze the need for quantum computing and identify the different types of quantum computers in the market currently available."

03

Course Management

TECH has made an exhaustive search for the best professionals in leading technologies and disciplines. Experts in the field of Quantum Computing meet in this Diploma to teach graduates, through theoretical and practical analysis, the management of knowledge and data through this technology. Obtaining the right knowledge and advice will be essential in order to take advantage of the developments that are taking place and will take place in the coming years.

You are facing an emerging market where, due to its complexity and immaturity, obtaining the right knowledge and advice will provide you with competitive advantages in the labor market"

Management

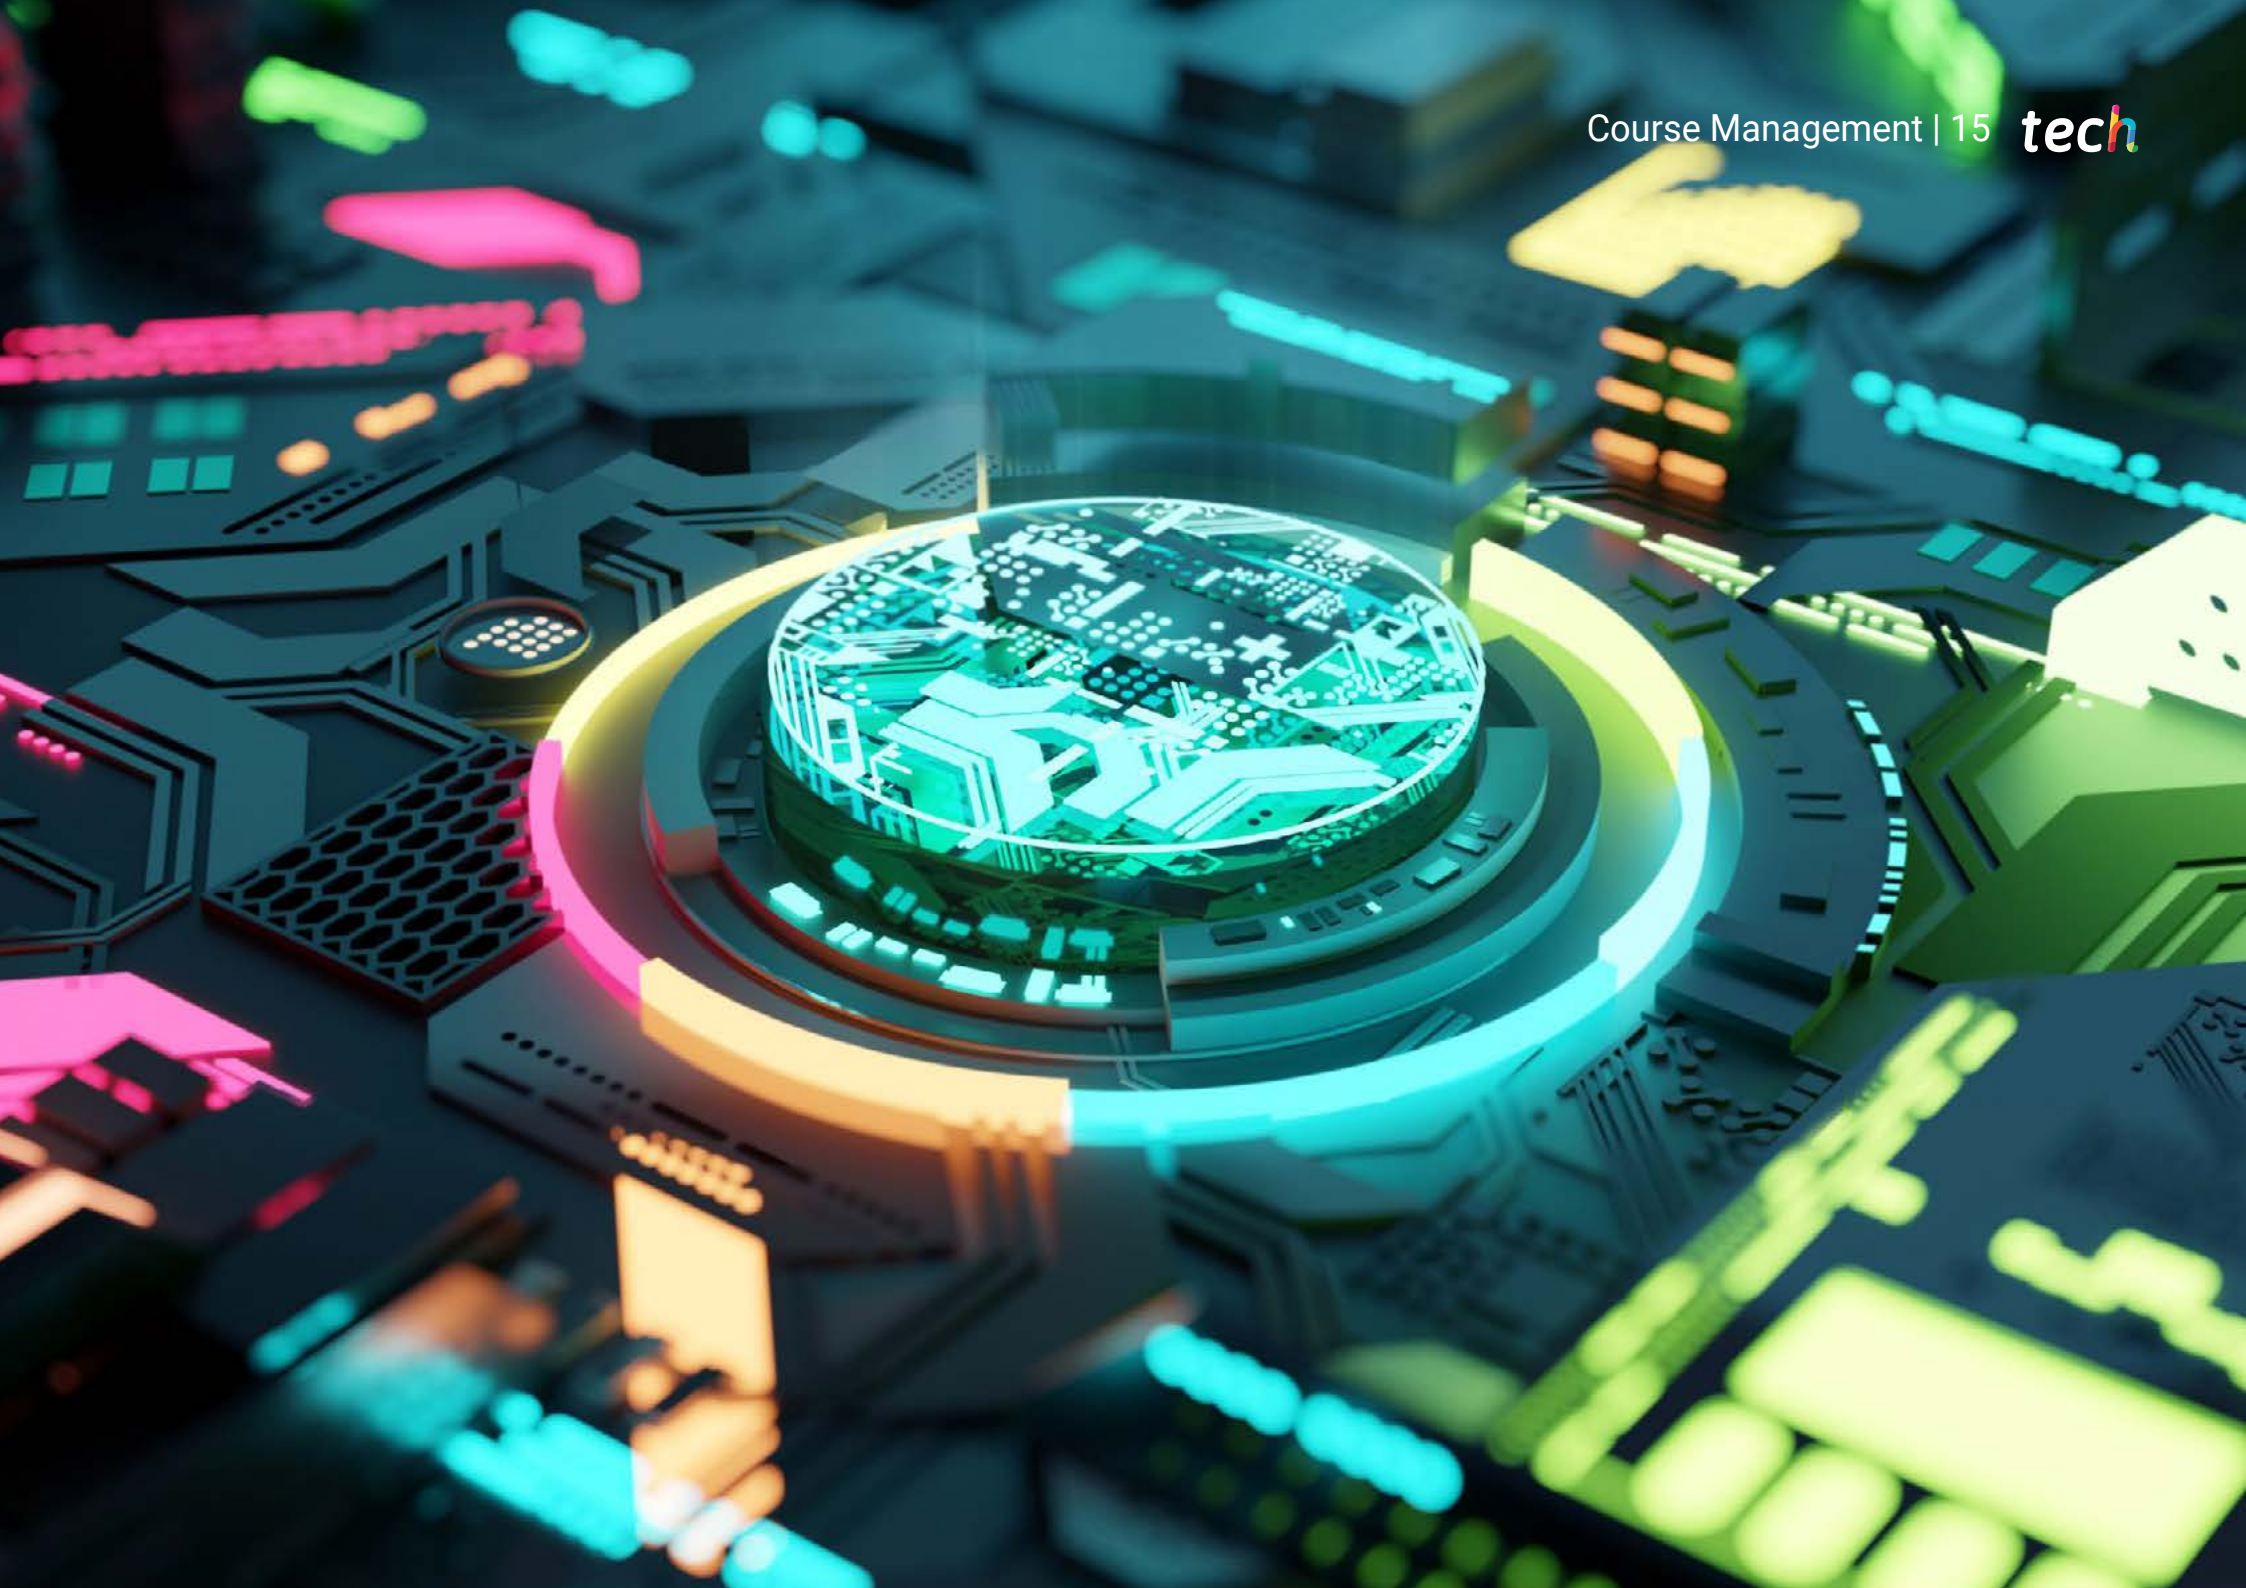
Mr. Molina Molina, Jerónimo

- Head of the Artificial Intelligence Department at Ibermática
- IA Engineer & Software Architect at NASSAT - Internet Satellite in Motion
- Senior Consultant at Hexa Ingenieros. Introducer of Artificial Intelligence (ML and CV).
- Expert in Artificial Intelligence Based Solutions, in the fields of *Computer Vision*, ML/DL and NLP
- Expert in Business Creation and Development at Bancaixa - FUNDEUN Alicante
- Computer Engineer from the University of Alicante
- Master's Degree in Artificial Intelligence from the Catholic University of Avila
- Executive MBA (European Business Campus Forum)

Professors

Dr. Moreno Fernández de Leceta, Aitor

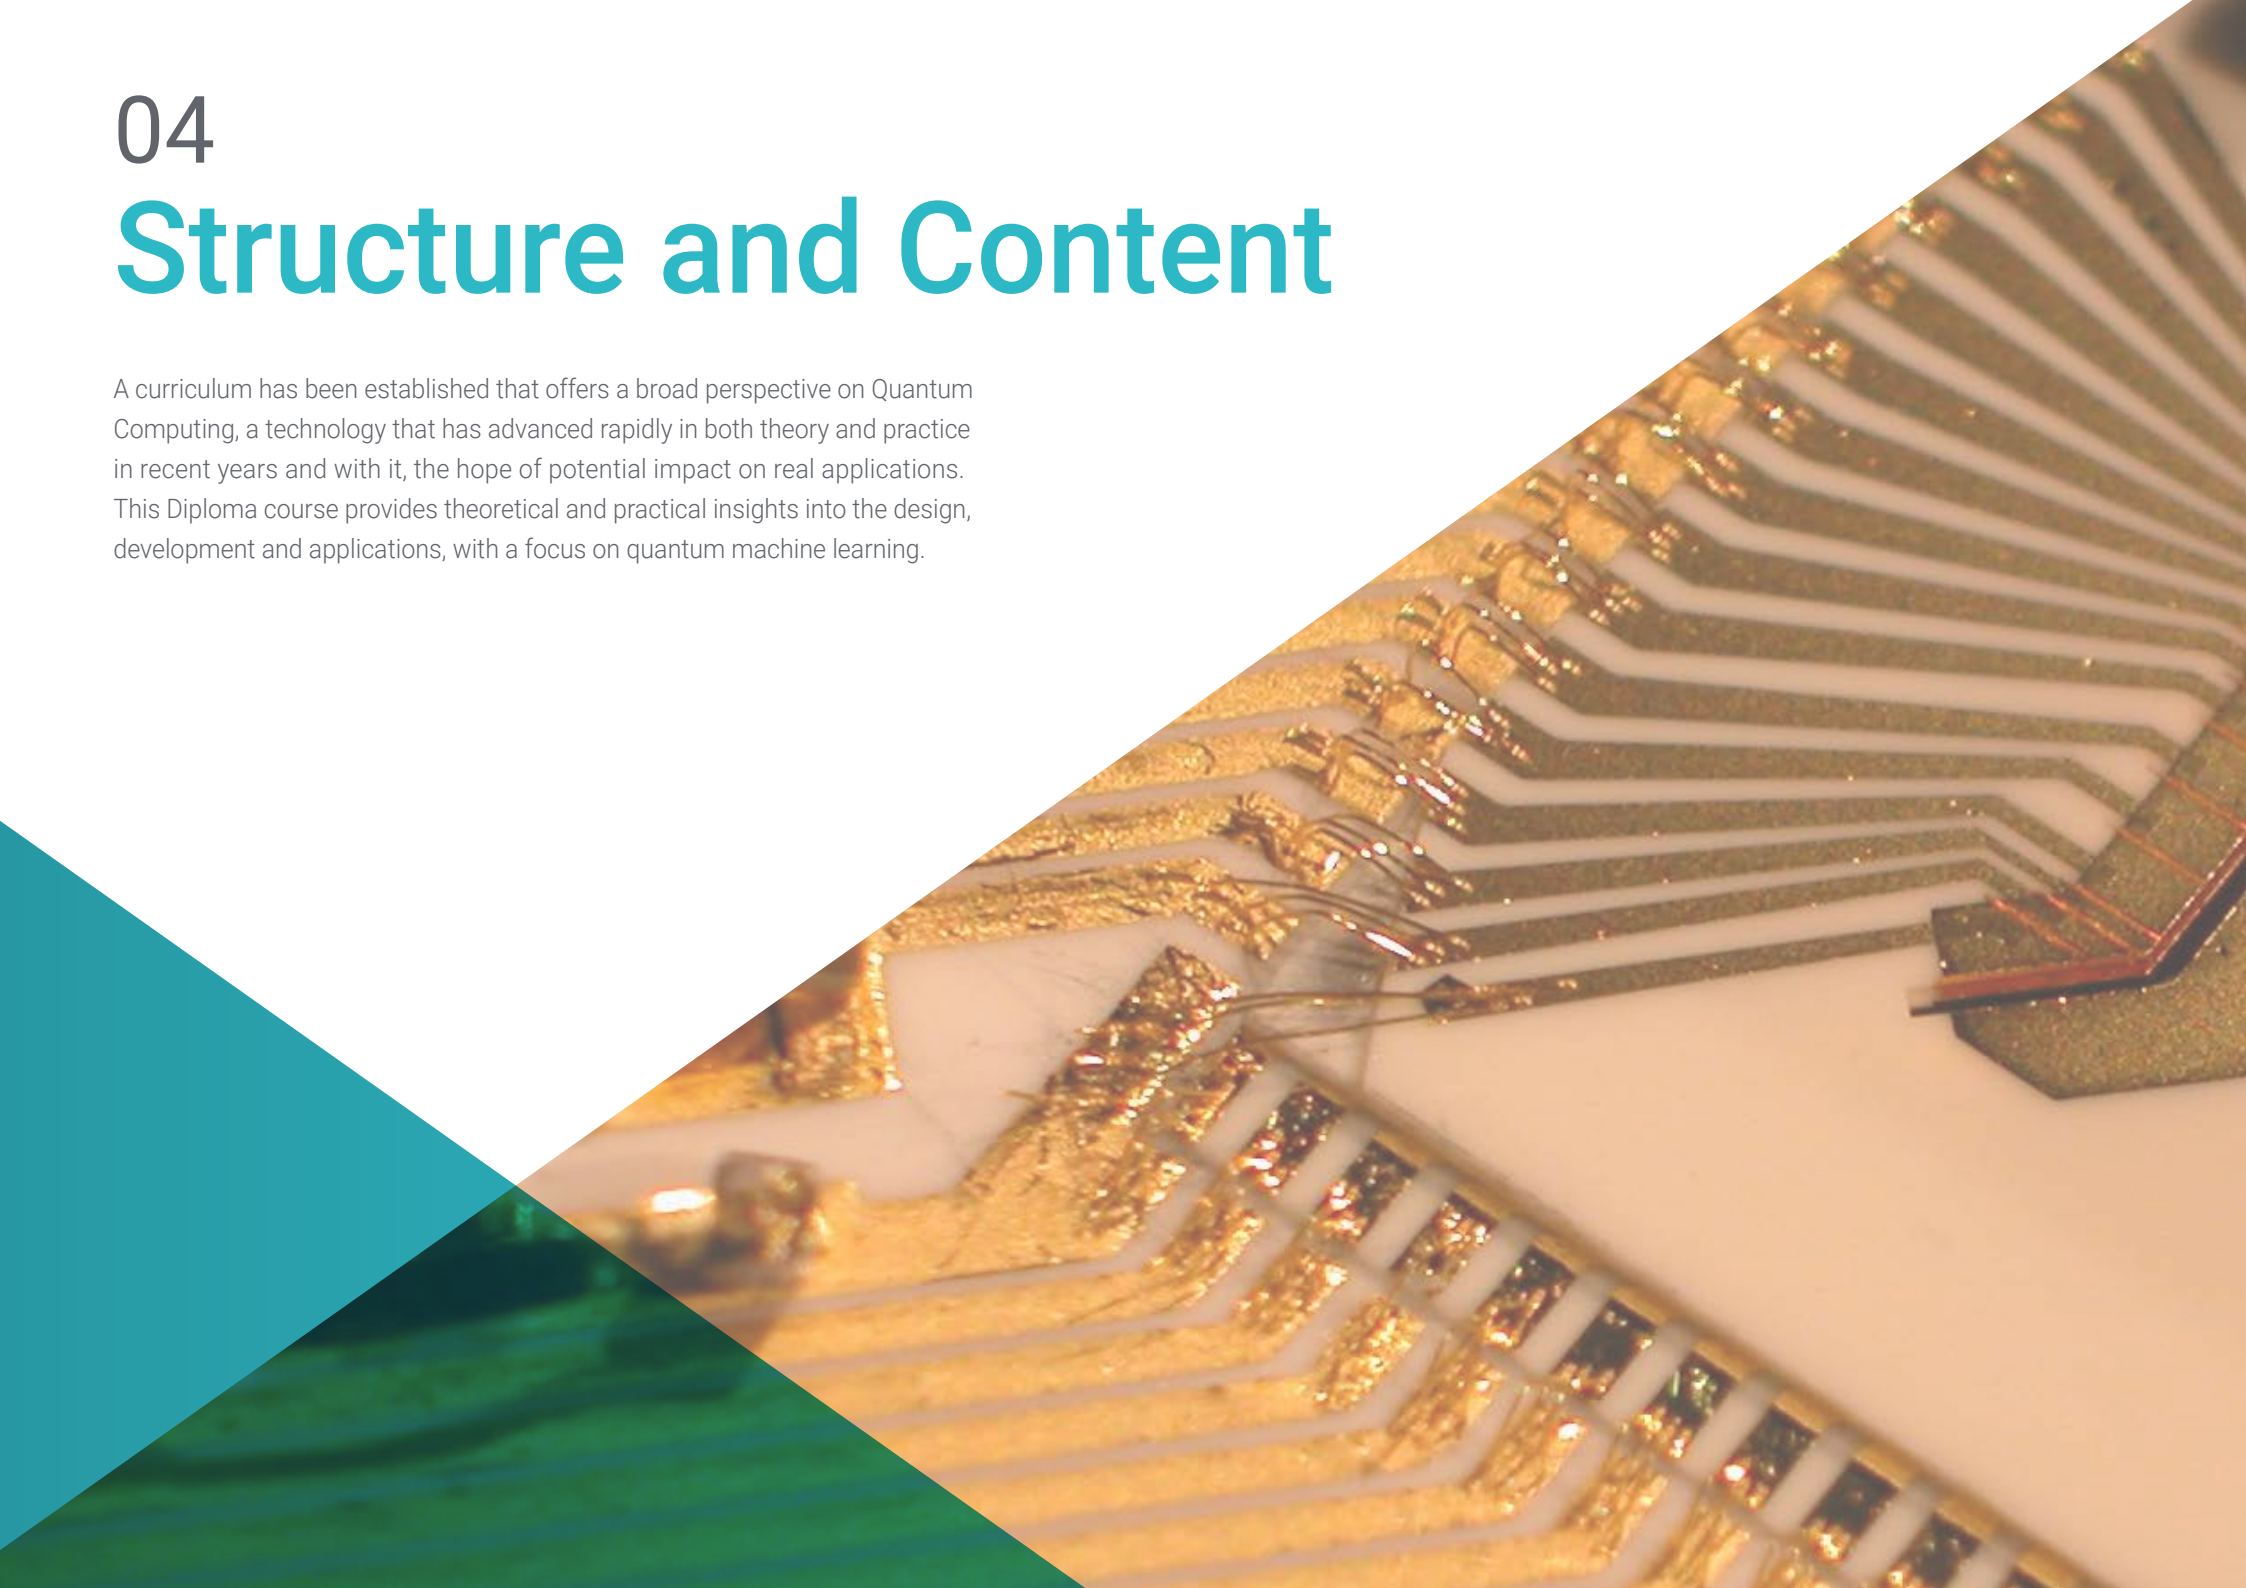
- Head of the Artificial Intelligence Department at Ibermática
- PeopleSoft Analyst at CEGASA INTERNACIONAL
- PhD in Artificial Intelligence from the University of the Basque Country.
- Master's Degree in Advanced Artificial Intelligence by the National University of Distance Education
- Degree in Computer Engineering from the University of Deusto
- Certificate in Computational Neuroscience from the University of Washington
- Certificate in Quantum Computing, Simulation Theory and Programming from the University of Washington



04

Structure and Content

A curriculum has been established that offers a broad perspective on Quantum Computing, a technology that has advanced rapidly in both theory and practice in recent years and with it, the hope of potential impact on real applications. This Diploma course provides theoretical and practical insights into the design, development and applications, with a focus on quantum machine learning.



Delve into the conception, development and applications of Quantum Computing, focusing on quantum machine learning"

Module 1. Quantum Computing. A New Model of Computing

1.1. Quantum Computing
- 1.1.1. Differences with Classical Computing
- 1.1.2. Need for Quantum Computing
- 1.1.3. Quantum Computers Available: Nature and Technology

1.2. Applications of Quantum Computing
- 1.2.1. Quantum Computing vs. Classical Computing Applications
- 1.2.2. Contexts of Use
- 1.2.3. Application in Real Cases

1.3. Mathematical Foundations of Quantum Computing
- 1.3.1. Computational Complexity
- 1.3.2. Double Slit Experiment. Particles and Waves
- 1.3.3. Intertwining

1.4. Geometric Foundations of Quantum Computing
- 1.4.1. Qubit and Complex Two-Dimensional Hilbert Space
- 1.4.2. Dirac's General Formalism
- 1.4.3. N-Qubits States and Hilbert Space of Dimension 2n

1.5. Mathematical Fundamentals of Linear Algebra
- 1.5.1. The Domestic Product
- 1.5.2. Hermitian Operators
- 1.5.3. Eigenvalues and Eigenvectors

1.6. Quantum Circuits
- 1.6.1. Bell States and Pauli Matrices
- 1.6.2. Quantum Logic Gates
- 1.6.3. Quantum Control Gates

1.7. Quantum Algorithms
- 1.7.1. Reversible Quantum Gates
- 1.7.2. Quantum Fourier Transform
- 1.7.3. Quantum Teleportation

1.8. Algorithms Demonstrating Quantum Supremacy
- 1.8.1. Deutsch´s Algorithm
- 1.8.2. Shor´s Algorithm
- 1.8.3. Grover´s Algorithm

1.9. Quantum Computer Programming
- 1.9.1. My First Program on Qiskit (IBM)
- 1.9.2. My First Program on Ocean (Dwave)
- 1.9.3. My First Program on Cirq (Google)

1.10. Application on Quantum Computers
- 1.10.1. Creation of Logical Gates
  - 1.10.1.1. Creation of a Quantum Digital Adder
- 1.10.2. Creation of Quantum Games
- 1.10.3. Secret Key Communication between Bob and Alice

Module 2. Quantum Machine Learning. Future Artificial Intelligence

2.1. Classical *Machine Learning* Algorithms
- 2.1.1. Descriptive, Predictive, Proactive and Prescriptive Models
- 2.1.2. Supervised and Unsupervised Models
- 2.1.3. Feature Reduction, PCA, Covariance Matrix, SVM, Neural Networks
- 2.1.4. ML Optimization: Gradient Descent

2.2. Classic *Deep Learning* Algorithms
- 2.2.1. Boltzmann Networks. The *Machine Learning* Revolution
- 2.2.2. *Deep Learning* Models. CNN, LSTM, GANs
- 2.2.3. *Encoder-Decoder* Models
- 2.2.4. Signal Analysis Models. Fourier Analysis

2.3. Quantum Classifiers
- 2.3.1. Quantum Classifier Generation
- 2.3.2. Amplitude Coding of Data in Quantum States
- 2.3.3. Encoding of Data in Quantum States by Phase/Angle
- 2.3.4. High-Level Coding

2.4. Optimization Algorithms
- 2.4.1. *Quantum Approximate Optimization Algorithm* (QAOA)
- 2.4.2. *Variational Quantum Eigensolvers* (VQE)
- 2.4.3. *Quadratic Unconstrained Binary Optimization* (QUBO)

2.5. Optimization Algorithms Examples:
- 2.5.1. PCA with Quantum Circuits
- 2.5.2. Optimization of Stock Packages
- 2.5.3. Optimization of logistics routes

2.6. *Quantum Kernels Machine Learning*
- 2.6.1. *Variational Quantum Classifiers*. QKA
- 2.6.2. *Quantum Kernels Machine Learning*
- 2.6.3. Classification Based on *Quantum Kernel*
- 2.6.4. *Clustering* Based on *Quantum Kernel*

2.7. *Quantum Neural Networks*
- 2.7.1. Classical Neural Networks and Perceptron
- 2.7.2. Quantum Neural Networks and Perceptron
- 2.7.3. Quantum Convolutional Neural Networks

2.8. Advanced *Deep Learning* (DL) Algorithms
- 2.8.1. *Quantum Boltzmann Machines*
- 2.8.2. *General Adversarial Networks*
- 2.8.3. *Quantum Fourier Transformation, Quantum Phase Estimation and Quantum Matrix*

2.9. *Machine Learning Use Case*
- 2.9.1. Experimentation with VQC (*Variational Quantum Classifier*)
- 2.9.2. Experimentation with *Quantum Neural Networks*
- 2.9.3. Experimentation with GANS

2.10. Quantum Computing and Artificial Intelligence
- 2.10.1. Quantum Capacity in ML Models
- 2.10.2. Quantum *Knowledge Graphs*
- 2.10.3. The Future of Quantum Artificial Intelligence

05

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning.**

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world"

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

The student will learn to solve complex situations in real business environments through collaborative activities and real cases.

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

> *Our program prepares you to face new challenges in uncertain environments and achieve success in your career"*

The case method has been the most widely used learning system among the world's leading Information Technology schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question that you are presented with in the case method, an action-oriented learning method. Throughout the course, students will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

Relearning Methodology

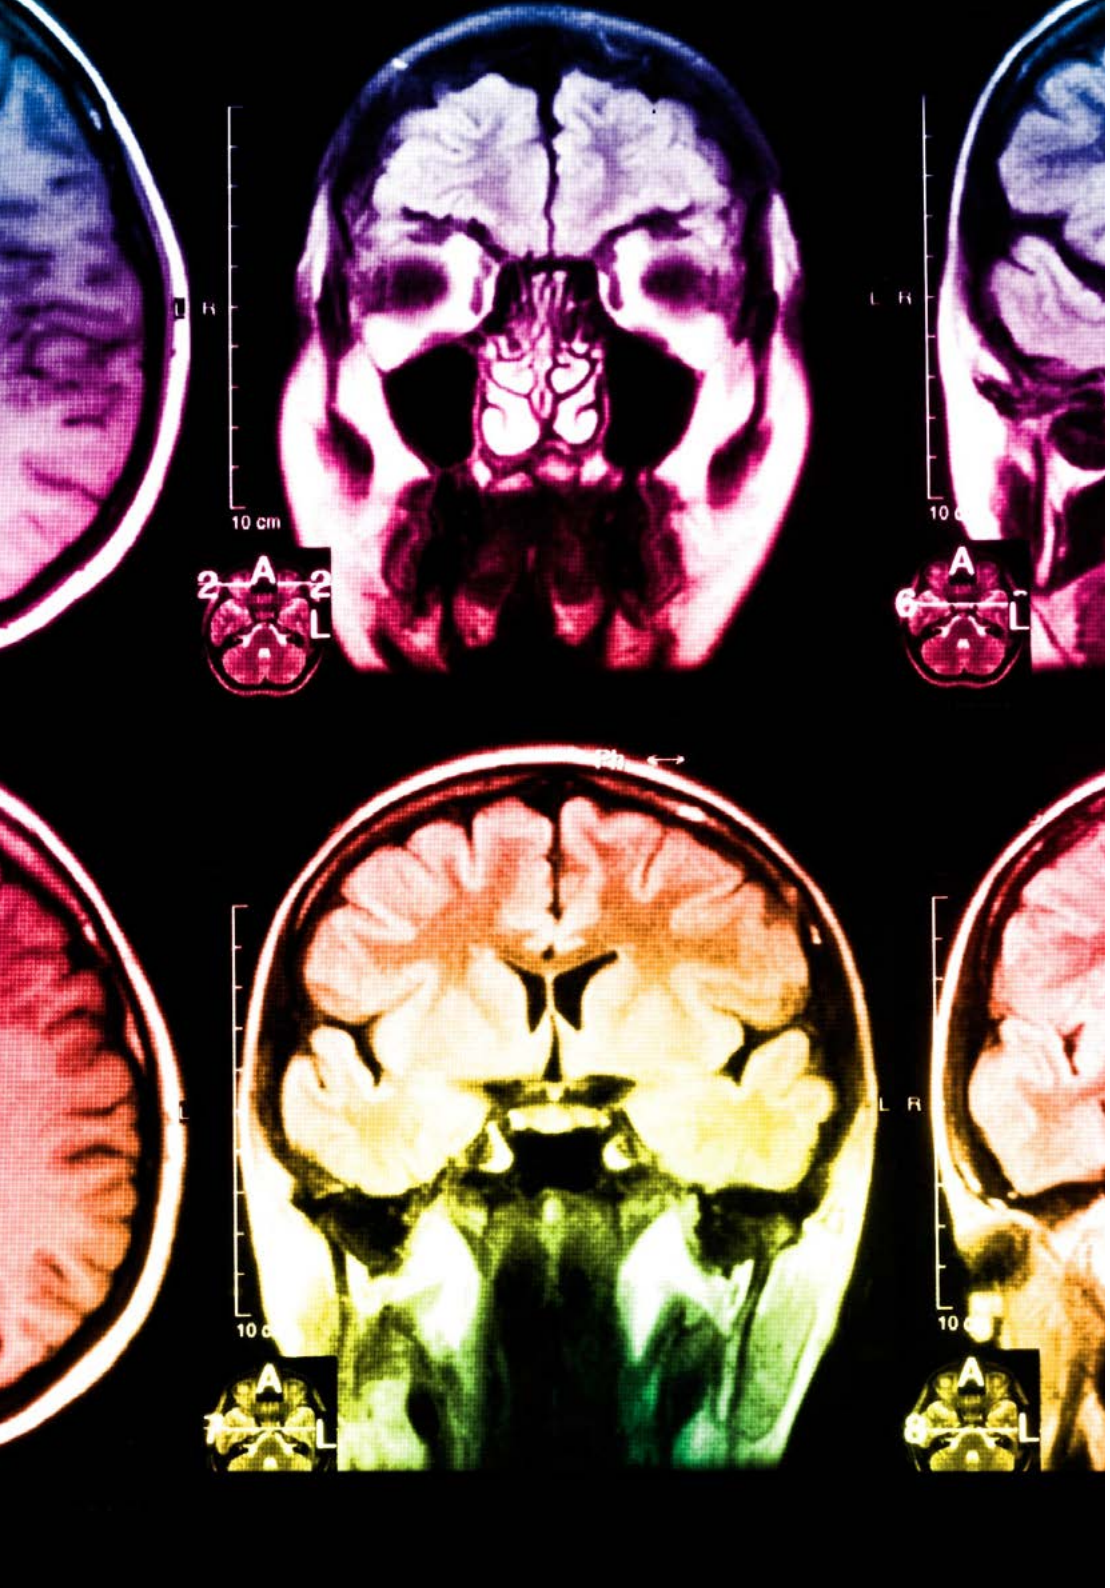
TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.



In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically. This methodology has trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, and financial markets and instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

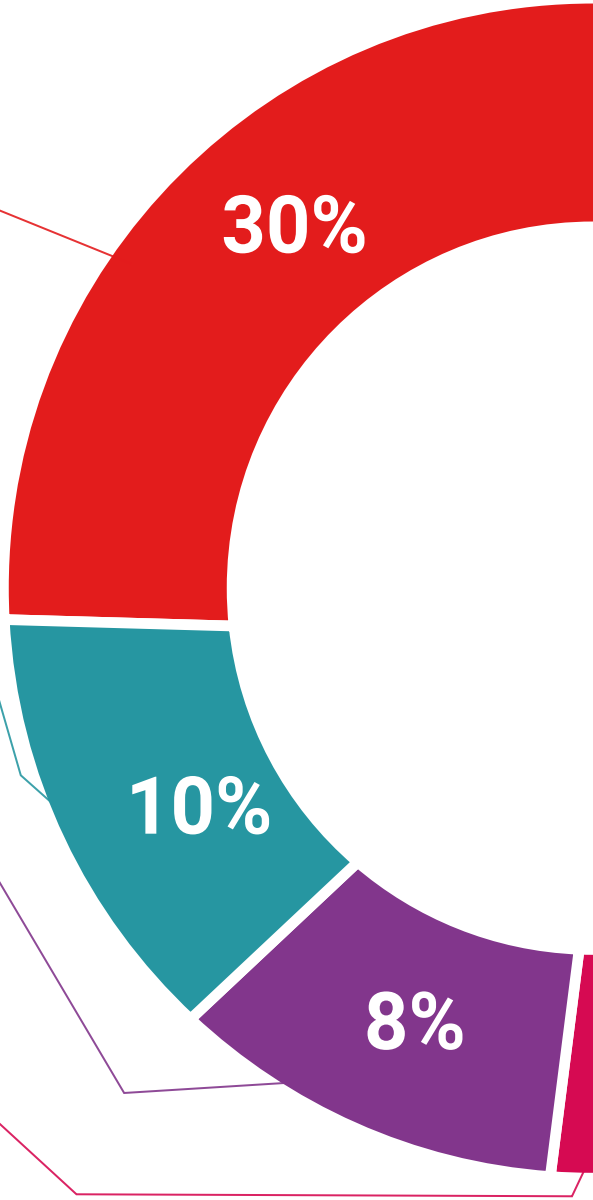
Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

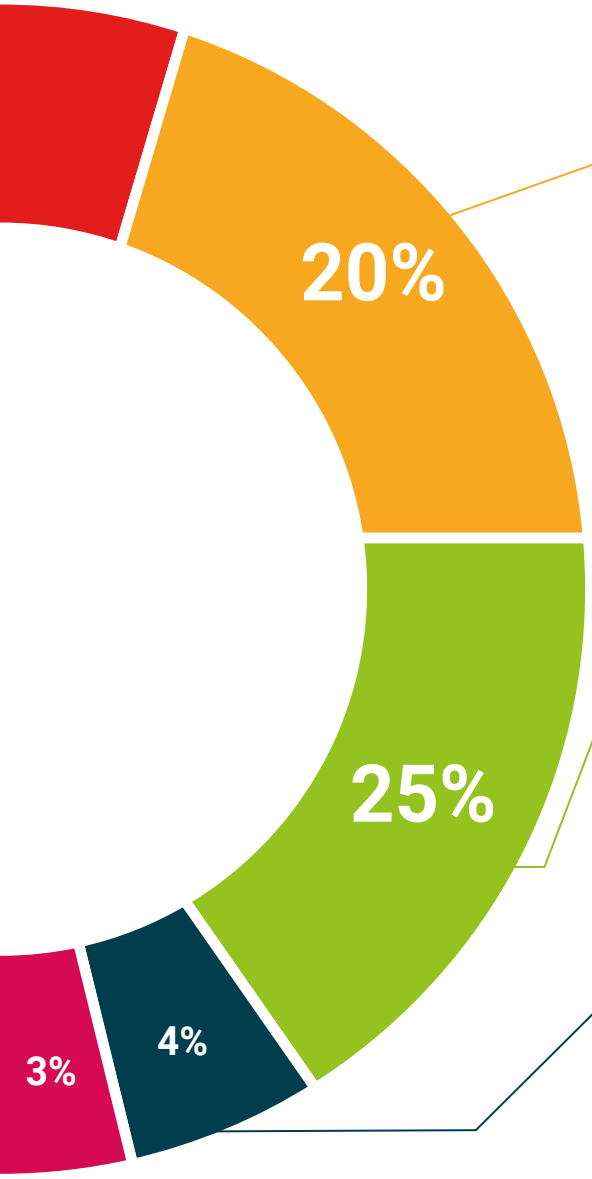
Practising Skills and Abilities

They will carry out activities to develop specific skills and abilities in each subject area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.





Case Studies

Students will complete a selection of the best case studies chosen specifically for this program. Cases that are presented, analyzed, and supervised by the best specialists in the world.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

06

Certificate

The Postgraduate Certificate in Quantum Computing guarantees students, in addition to the most rigorous and up-to-date education, access to a Postgraduate Certificate issued by TECH Technological University.

Successfully complete this program and receive your university qualification without having to travel or fill out laborious paperwork"

This **Postgraduate Certificate in Quantum Computing** contains the most complete and up-to-date program on the market.

After the student has passed the assessments, they will receive their corresponding **Postgraduate Certificate** issued by **TECH Technological University** via tracked delivery*.

The diploma issued by **TECH Technological University** will reflect the qualification obtained in the Postgraduate Certificate, and meets the requirements commonly demanded by labor exchanges, competitive examinations and professional career evaluation committees.

Title: **Postgraduate Certificate in Quantum computing**

Official Nº of Hours: **300 h.**

tech technological university

Awards the following

DIPLOMA

to

Mr./Ms. _____, with identification number _____.

For having passed and accredited the following program

POSTGRADUATE CERTIFICATE

in

Quantum Computing

This is a qualification awarded by this University, equivalent to 300 hours, with a start date of dd/mm/yyyy and an end date of dd/mm/yyyy.

TECH is a Private Institution of Higher Education recognized by the Ministry of Public Education as of June 28, 2018.

June 17, 2020
