Introduction

Political Communication has a high value for the attainment of power by a party. For this reason, all factions and government alternatives surround themselves with the best communication team, on which they rely to win the favor of citizens and, therefore, their votes. In this sense, the training of journalists and political communicators is essential, since it is a highly specialized sector that requires qualified professionals.

“

Political Communication puts into action specific strategies that require the journalist to have a deep knowledge of the political functioning and its message. This Advanced Master's Degree will enable you to move with the efficiency of an expert in the sector”

Politics is the most specific activity of human beings and is linked to all the processes that surround societies. Political activity, in its attempt to shape society according to individual and collective ideals, has as its main objective the attainment of power, which represents, in modern democratic regimes, the attainment of a sufficient number of citizen support to be able to develop an organization of society close to its ideological approaches.

In this context, journalism and political communication are of vital importance, through which citizens get to know their possible representatives, acquiring sympathies and dislikes that lead them to elect certain institutional representatives.

Ideologies, relations with power and institutions, information flows and their intentionality, *Fake News*, as well as many other factors, become the key to an essential knowledge for the journalist in this sector, so it is essential to have a high level of knowledge in the field. In this way, Political Communication becomes one of the sectors that requires greater specialization and expertise, in order to differentiate and offer the quality information that citizens should receive.

Throughout this specialization, the student will learn all of the current approaches to the different challenges posed by their profession. A high-level step that will become a process of improvement, not only on a professional level, but also on a personal level.

This challenge is one of those that TECH assumes as a social commitment: to help the specialization of highly qualified professionals and develop their personal, social and work skills during the development of the same.

The student will not only be taken through the theoretical knowledge offered, but will understand another way of studying and learning, more organic, simpler and more efficient. TECH will work to keep them motivated and to create a real passion for learning, pushing the professional to think and develop critical thinking.

This Advanced Master's Degree is designed to give the student access to the specific knowledge of this discipline in an intensive and practical way. A great value for any professional.

Furthermore, as it is a 100% online specialization, the student decides where and when to study. Without the restrictions of fixed timetables or having to move between classrooms, this course can be combined with work and family life.

This **Advanced Master's Degree in Political Communication** contains the most complete and up-to-date program on the market. The most important features include:

- ♦ The latest technology in online teaching software
- ♦ A highly visual teaching system, supported by graphic and schematic contents that are easy to assimilate and understand

High level learning, supported by an advanced technological development and the teaching experience of the best professionals"

“

A program created for professionals who aspire to excellence and that will allow you to acquire new skills and strategies in a fluent and effective way”

TECH's teaching staff is composed of working professionals. In this way, the university ensures that it provides the training update objective it intends. It also has a multidisciplinary team of trained and experienced professionals in different environments, who will develop the theoretical knowledge efficiently, but, above all, who will put at the service of the specialization the practical knowledge derived from their own experience.

This mastery of the subject is complemented by the efficiency of the methodological design of this advanced master's degree. Developed by a team of e-learning experts, it integrates the latest advances in educational technology. In this way, students will be able to study with a range of convenient and versatile multimedia tools that will give them the operational skills they need for their specialization.

The design of this program is based on Problem-Based Learning, an approach that conceives learning as a highly practical process. To achieve this remotely TECH uses *telepractice*. With the help of an innovative interactive video system and *Learning from an Expert*, the professional will be able to acquire the knowledge as if they were facing the scenario they are learning at that moment, a concept that will allow them to integrate and set the learning in a more realistic and permanent way.

We offer you a deep and complete immersion in the most updated strategies and approaches in this field.

We have the best teaching methodology and a multitude of simulated cases that will help you train in real situations.

02

Objectives

TECH's objective is to prepare highly qualified professionals for work experience. An objective that is complemented, moreover, in a global manner, by promoting human development that lays the foundations for a better society. This objective is materialized in helping professionals to access a much higher level of skill and control, a goal that the student will be able to achieve with this high intensity and precision program.

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

“

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world”

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

The student will learn, through collaborative activities and real cases, how to solve complex situations in real business environments.

A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

“*Our program prepares you to face new challenges in uncertain environments and achieve success in your career*”

The case method has been the most widely used learning system among the world's leading business schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question we face in the case method, an action-oriented learning method. Throughout the program, the studies will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines 8 different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH, you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

This methodology has trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, and financial markets and instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Practising Skills and Abilities

They will carry out activities to develop specific skills and abilities in each subject area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Case Studies

Students will complete a selection of the best case studies chosen specifically for this program. Cases that are presented, analyzed, and supervised by the best specialists in the world.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.
