Digital Marketing
for Social Media

The image features a close-up of a notepad with the words "DIGITAL MARKETING" written in large, bold, black letters. The text is highlighted with a bright yellow marker. Above the main text, the word "OPTIMIZATION" is partially visible, written in smaller black letters. To the left, the letters "SEO" are written in green on a yellow sticky note. The notepad is surrounded by various colorful geometric shapes and other handwritten notes, including a blue scribble that looks like "Feed" and a globe sketch. A pair of dark blue-rimmed glasses is resting on the right side of the notepad. The background is a collage of colorful geometric shapes in shades of blue, green, orange, and red.

Introduction

Marketing departments are one of the main departments of companies, due to the great power they have in consumption, being able to direct their campaigns towards the most representative consumer profiles for brands, but, in addition, they can analyze the market and design competitive strategies that allow a greater reach in their advertising. The specialization of journalists in this field is increasing, which is why TECH has designed this specific program for this professional profile, meeting their needs and those of the companies.

“

This program will help you learn how to apply the main Digital Marketing tools for Social Media in your work to achieve the maximum possible benefits”

Marketing strategies are closely related to communication, because the emission of a particular message is the key to both. In this sense, it must be taken into account that advertising communication has changed in the last twenty years with the creation of the so-called digital ecosystem, which alters the different ways of communication thanks to the possibilities opened by technology. The digital environment generates different keys to social behavior, requires new languages and modifies the relationships between senders and receivers of messages. It also implies new patterns of contextualization and interpretation of content.

For all these reasons, it is important to know the role of communication in marketing processes and, above all, it is especially important to improve the training of journalists in this field, since their correct use of language makes them a suitable profile to stand out in this field. Thinking about this, TECH has designed a Postgraduate Diploma in Digital Marketing for Social Media that will mark a before and after in the training of these professionals, by having the most innovative resources and advanced knowledge on this subject. Thus, throughout these months, the student will learn to analyze, interpret and structure digital information to create appropriate marketing campaigns to achieve the objectives of the companies.

A program that will teach students, through experience, to develop successfully in the tool management of Digital Marketing for Social Media. A learning that is achieved by combining practical and theoretical teaching, offering a unique option to obtain a greater visibility of their resumes.

This **Postgraduate Diploma in Digital Marketing for Social Media** contains the most complete and up-to-date program on the market. The most important features include:

Join elite work teams in the field of digital marketing and bring all your knowledge to succeed in the sector”

“ *A Postgraduate Diploma that will enable you to work in all areas of digital marketing with the solvency of a high-level professional*”

The teaching staff of this program is made up of professionals from different fields related to this specialty. In this way, TECH ensures to offer students the educational updating objective it aims to provide. A multidisciplinary team of experienced professionals in different environments, who will develop theoretical knowledge efficiently, but above all, will put their practical knowledge derived from their own experience at the students' service.

This mastery of the subject matter is complemented by the effectiveness of the methodological design. Developed by a multidisciplinary team of e-learning experts, it integrates the latest advances in educational technology. As a result, students will be able to study with a range of comfortable and versatile multimedia tools that will give them the operational capacity they need in their study process.

The design of this program is centered on Problem-Based Learning. An approach that conceives learning as a highly practical process. To achieve this remotely, *telepractice* is used. Therefore, with the help of an innovative interactive video system, and *Learning from an Expert*, the students will be able to acquire the knowledge as if they were facing the very cases being studied. A concept that will allow students to integrate and memorize what they have learnt in a more realistic and permanent way.

A unique, key, and decisive educational experience to boost your professional development.

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

“

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world”

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

The student will learn, through collaborative activities and real cases, how to solve complex situations in real business environments.

A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

“*Our program prepares you to face new challenges in uncertain environments and achieve success in your career*”

The case method has been the most widely used learning system among the world's leading business schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question we face in the case method, an action-oriented learning method. Throughout the program, the studies will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines 8 different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH, you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

This methodology has trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, and financial markets and instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Practising Skills and Abilities

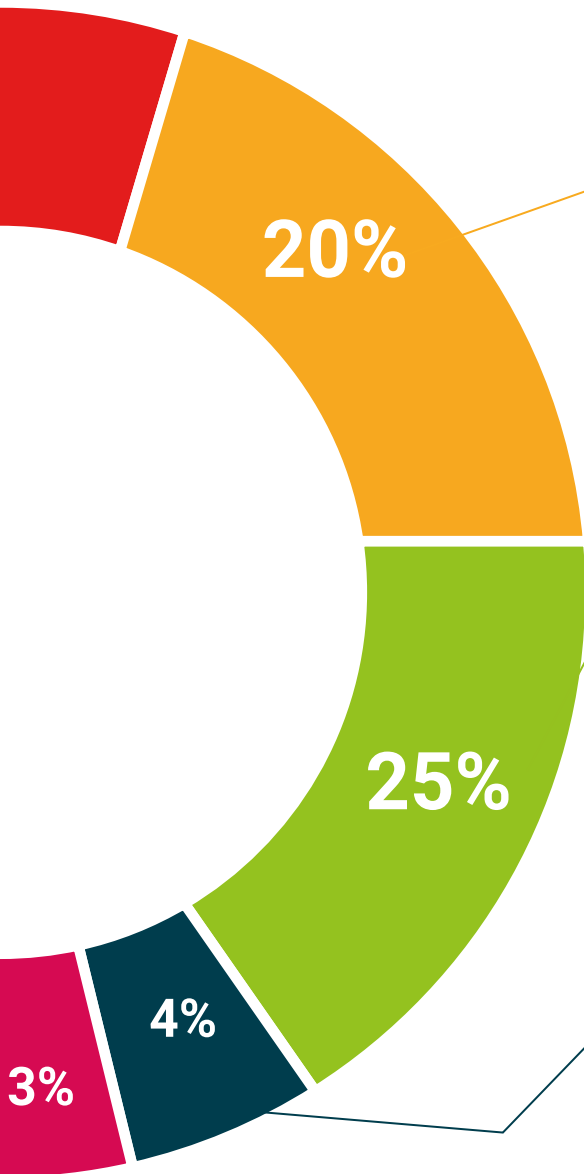

They will carry out activities to develop specific skills and abilities in each subject area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Case Studies

Students will complete a selection of the best case studies chosen specifically for this program. Cases that are presented, analyzed, and supervised by the best specialists in the world.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.
