Introduction

Scrotal and testicular pathology often has both physical and fertility implications. Along with oncological and incapacitating pathologies, there are also other pathological situations that require surgical intervention for their resolution. This course is designed to update the specialist in the most commonly used procedures, in a practical way and adapted to your needs.

“

The new scenarios encourage us to propose new training programs that meet the real needs of professionals, so that they can incorporate the advances that are taking place in the approach to testicular and scrotal surgery into their daily surgical practice"

To manage many of the pathologies present in the testicular and scrotal area, it is necessary to resort to surgical procedures. This requires high medical skills and extensive knowledge to treat each of the pathologies present, ranging from benign pathologies to testicular cancer. Likewise, this area represents a great challenge, since various diseases can be found and specifically need procedures such as vasectomy, vasovasostomy, varicocele, hydrocele, among others.

It is for this reason that TECH has created this 100% online degree, full of updated information regarding the most recent advances and demands of the medical sector. Inside, the professional will find developed knowledge on the latest trends in testicular surgery. In the same way it will delve into the procedures to be performed, as well as procedures not produced by diseases, but by choice of the patient, this being the orchiectomy and sperm recovery techniques.

All this is presented through high-impact audiovisual resources, complementary readings and practical exercises. It also has the Relearning methodology, based on the optimization of knowledge through experience, leaving behind the long hours of forced memorization. In addition, the professional will not need to go to an on-site center and will be able to develop the degree from their own device, only needing an Internet connection.

This **Postgraduate Certificate in Surgical Pathology of the Scrotum and Testicles** contains the most complete and up-to-date scientific program on the market. The most important features include:

- ♦ Development of clinical cases, presented by specialists in urological surgery and other specialties
- ♦ The graphic, schematic, and practical contents with which they are created, provide scientific and practical information on the disciplines that are essential for professional practice
- ♦ Update on surgical procedures in scrotal and testicular pathologies
- ♦ It includes the latest diagnostic and therapeutic techniques, as well as the latest procedures in lymphadenectomy
- ♦ An algorithm-based interactive learning system for decision-making in the clinical situations presented throughout the course
- ♦ All of this will be complemented by theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ♦ Content that is accessible from any fixed or portable device with an Internet connection

Through the latest educational technology, you will be able to learn about the latest advances in Surgical Pathology of the Scrotum and Testicles”

“

This Postgraduate Certificate is the best investment you can make when selecting a refresher program for two reasons: in addition to updating your knowledge in Surgical Pathology of the Scrotum and Testicles, you will obtain a qualification endorsed by TECH Global University”

Integrate the latest developments in the management of testicular and scrotal pathology into your surgical practice and improve the prognosis of your patients.

It includes clinical cases and real images in high definition to bring clinical practice as close as possible to the development of the program.

It includes in its teaching staff, a team of leading urologists, who bring to this training the experience of their work, as well as recognized specialists in other medical areas.

Thanks to its multimedia content developed with the latest educational technology, this Postgraduate Certificate will give the professional a situated and contextual learning, that is to say, a simulated environment that will provide an immersive learning programmed to learn in real situations.

This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise throughout the program. For this purpose, he will be assisted by an innovative interactive video system developed by renowned experts with extensive teaching experience in the field of urological surgery.

02 Objectives

The main objective is oriented towards allowing the incorporation of the advances that are being made in surgical techniques for the pathology of the scrotum and testicles, ensuring that the specialist can update his knowledge in a practical way, with the latest educational technology and adapting the educational process to his real needs.

“

This refresher program will generate a sense of security in decision making in the surgical process, and will help you grow professionally"

General Objective

- Update the medical specialist in surgical procedures for the different pathologies of the scrotum and testicles, including the approach to the oncological process and the latest trends in vasectomy techniques

Seize the opportunity and get up to date on the most important aspects of surgical pathology of the scrotum and testicles”

Specific Objectives

- ♦ Review the scrotal surgical technique and its content
- ♦ Review the current evidence on partial orchiectomy
- ♦ Review hydrocele, its diagnostic and therapeutic algorithm
- ♦ Apply surgical techniques for the treatment of varicocele
- ♦ Review technique of lymphadenectomy in testicular cancer

03

Course Management

The creation of the materials has been carried out by a team of leading professionals in the field of scrotal and testicular surgery, who perform their professional activity in prestigious hospitals. Additionally, other recognized specialists participate in its design and preparation, which means that the scientific program is developed in an interdisciplinary manner.

“

Learn from leading professionals the latest advances in the surgical approach to scrotal and testicular pathology”

International Guest Director

Dr. Andrew Jason Cohen is a world-renowned physician in the field of Urology. He is a clinical expert with more than a decade of practical experience in complex genitourinary reconstruction, demonstrating comprehensive management of erectile dysfunction, urinary incontinence, stricture diseases of the urinary system, Peyronie's disease, genital skin conditions, urinary detour and other benign urological pathologies. In addition, **he has been a reference in the field of Robotic Surgery** through the detailed study and application of the multiple techniques that are currently known.

He has managed to shape himself as such thanks to an extensive academic career of the highest level, which includes **two degrees with summa cum laude honors** (in Chemical Engineering and Medicine), as well as a PhD in the latter scientific branch. In addition, his excellence earned him a **Clinical Fellowship in Trauma and Reconstructive Surgery at the University of California, San Francisco School of Medicine**. On the other hand, his prestige has also been recognized by the Alpha Omega Alpha Honor Society, which has included him as a member.

In addition to all this, he has an extensive and multidisciplinary career in **international reference centers in the context of Urology**: specialist at Mitchell-Hyde Park Hospital, director of Urological Trauma and Reconstructive Surgery at the Brady Urological Institute at Bayview Medical Center and as director of Traumatology and Urological Reconstructive Surgery at the very important **Johns Hopkins Medicine**. In addition, he has authored dozens of research articles indexed in major scientific journals, activity that has combined, in turn, with teaching in several subjects of the Degree in Medicine and Surgery.

- 1.5. Orchiectomy
- 1.6. Sperm Retrieval Techniques
- 1.7. Lymphadenectomy in Testicular Cancer

“

A unique, key, and decisive educational experience to boost your professional development”

05 Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

At TECH we use the Case Method

What should a professional do in a given situation? Throughout the program, students will face multiple simulated clinical cases, based on real patients, in which they will have to do research, establish hypotheses, and ultimately resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method. Specialists learn better, faster, and more sustainably over time.

With TECH you will experience a way of learning that is shaking the foundations of traditional universities around the world.

According to Dr. Gérvas, the clinical case is the annotated presentation of a patient, or group of patients, which becomes a "case", an example or model that illustrates some peculiar clinical component, either because of its teaching power or because of its uniqueness or rarity. It is essential that the case is based on current professional life, trying to recreate the real conditions in the physician's professional practice.

“

Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method”

The effectiveness of the method is justified by four fundamental achievements:

1. Students who follow this method not only achieve the assimilation of concepts, but also a development of their mental capacity, through exercises that evaluate real situations and the application of knowledge.
2. Learning is solidly translated into practical skills that allow the student to better integrate into the real world.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

Relearning Methodology

At TECH we enhance the case method with the best 100% online teaching methodology available: Relearning.

This university is the first in the world to combine the study of clinical cases with a 100% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, a real revolution with respect to the mere study and analysis of cases.

Professionals will learn through real cases and by resolving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

With this methodology, more than 250,000 physicians have been trained with unprecedented success in all clinical specialties regardless of surgical load. Our pedagogical methodology is developed in a highly competitive environment, with a university student body with a strong socioeconomic profile and an average age of 43.5 years old.

Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by TECH's learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Surgical Techniques and Procedures on Video

TECH introduces students to the latest techniques, the latest educational advances and to the forefront of current medical techniques. All of this in direct contact with students and explained in detail so as to aid their assimilation and understanding. And best of all, you can watch the videos as many times as you like.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Expert-Led Case Studies and Case Analysis

Effective learning ought to be contextual. Therefore, TECH presents real cases in which the expert will guide students, focusing on and solving the different situations: a clear and direct way to achieve the highest degree of understanding.

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

Classes

There is scientific evidence on the usefulness of learning by observing experts. The system known as Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Quick Action Guides

TECH offers the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical, and effective way to help students progress in their learning.

06 Certificate

The Postgraduate Certificate in Surgical Pathology of the Scrotum and Testicles guarantees students, in addition to the most rigorous and up-to-date education, access to a Postgraduate Certificate issued by TECH Global University.

“

Successfully complete this program and receive your university qualification without having to travel or fill out laborious paperwork”

This program will allow you to obtain your **Postgraduate Certificate in Surgical Pathology of the Scrotum and Testicles** endorsed by **TECH Global University**, the world's largest online university.

TECH Global University is an official European University publicly recognized by the Government of Andorra (**official bulletin**). Andorra is part of the European Higher Education Area (EHEA) since 2003. The EHEA is an initiative promoted by the European Union that aims to organize the international training framework and harmonize the higher education systems of the member countries of this space. The project promotes common values, the implementation of collaborative tools and strengthening its quality assurance mechanisms to enhance collaboration and mobility among students, researchers and academics.

This **TECH Global University** title is a European program of continuing education and professional updating that guarantees the acquisition of competencies in its area of knowledge, providing a high curricular value to the student who completes the program.
