01

Introduction

Ultrasound is becoming increasingly relevant in diagnostic processes that seek to reduce the adverse effects that technology can cause to the patient. In recent years it has become an essential tool in the management of major pathological syndromes. This program facilitates the physician's updating in ultrasound-guided diagnostic and therapeutic procedures in a practical way and adapted to their needs.

“

Increase your knowledge through this program, where you will find the best didactic material with real clinical cases. Learn here about the latest advances in the specialty to be able to perform quality medical practice”

Clinical Ultrasonography is the technique of examining the body using ultrasound that is used for medical practice, related to the direct observation of the patient and their treatment. These days it is inconceivable to imagine specialists in obstetrics and gynecology, cardiology or urology attending to their patients without the use of ultrasounds. This idea is also being extended to almost all medical specialities.

Clinical ultrasonography increases the possibility of diagnosing and treating patients in an emergency situation or those who need critical care. In addition, it increases the ability to diagnose major syndromes, and is becoming an increasingly popular and valuable tool for guiding diagnostic and therapeutic interventions.

Its advantages include portability, accuracy, real-time visualization, reproducibility and efficiency. Its usefulness has been demonstrated in various hospital scenarios (emergency, intermediate care, semi-critical or intensive care, operating rooms, resuscitation, hospitalization, consultations, etc.), as well as in out-of hospital situations (home, public roads, health centers, emergencies, ambulances, etc.).

This program is aimed at facilitating the updating of the physician in the procedures for the use of ultrasound devices as diagnostic methods for major syndromes in the critically ill patient.

This **Postgraduate Diploma in Ultrasonographic Approach to the Major Syndromes and Ultrasound-Guided Procedures** contains the most complete and updated scientific program on the market. The most important features of the program include:

- Clinical cases presented by experts in the different specialties. The graphic, schematic, and eminently practical contents of which they are composed provide scientific and practical information on the disciplines that are essential for professional practice.
- New developments in the ultrasonographic approach to major syndromes in the critically ill patient.
- Algorithm-based interactive learning system for decision-making in the presented clinical situations.
- With special emphasis on evidence-based medicine and research methodologies in the use of diagnostic and therapeutic ultrasound.
- All this will be complemented by theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments.
- Content that is accessible from any fixed or portable device with an Internet connection.

Update your knowledge through the Postgraduate Diploma in the Ultrasonographic Approach to the Major Syndromes and Ultrasound-Guided Procedures, in a practical way and adapted to your needs"

“

This postgraduate diploma may be the best investment you can make when choosing a refresher program for two reasons: in addition to updating your knowledge in the Ultrasonographic Approach to the Major Syndromes, you will obtain a postgraduate diploma from TECH Technological University"

Its teaching staff includes renowned specialists in nutrition based on clinical practice, who bring the experience of their work to this training.

The multimedia content developed with the latest educational technology will provide the physician with situated and contextual learning, i.e., a simulated environment that will provide immersive training programmed to train in real situations.

Problem-Based Learning underpins this program design, and the doctor must use it to try and solve the different professional practice situations that arise throughout the course.

For this reason, you will be assisted by an innovative, interactive video system created by renowned and experienced experts in the field of nutrition with extensive teaching experience.

This program offers training in simulated environments, which provides an immersive learning experience designed to train for real-life situations.

It includes clinical cases to bring the program's degree as close as possible to the reality of care in medicine.

02 Objectives

The main objective of the program is the development of theoretical and practical learning, so that the physician can master in a practical and rigorous way the study of the ultrasonographic approach of the major syndromes and ultrasound-guided procedures.

“

This refresher program will generate a sense of confidence with medical practise and will help you grow both personally and professionally”

General Objectives

- Update the physician in the use of ultrasound devices for the management of abdominal and musculoskeletal pathologies in the patient, especially in emergency situations and in critical patients, regardless of the environment in which they find themselves.

Specific Objectives by Modules

- Define the physical principles which are involved in ultrasound imaging.
- Establish an appropriate ultrasound sequence for each examination of a patient.
- Explain the different ultrasound modes.
- Define the different types of ultrasound and their applications.
- Describe the different ultrasound maps.
- Explain the principles of econavigation.
- Explain the use of ultrasounds in cardiac arrest.
- Describe the use of ultrasound in cases of shock.
- Explain the use of ultrasounds in respiratory failure.
- Describe the use of ultrasound in cases of sepsis.
- Explain the use of ultrasounds in abdominal pain.
- Describe the use of ultrasound in trauma cases.
- Explain the use of ultrasounds in strokes.

- ♦ Explain the process of performing ultrasound-guided intubation.
- ♦ Describe the technique for vascular cannulation using ultrasound.
- ♦ Explain the process of performing thoracentesis using ultrasound.
- ♦ Describe the technique of ultrasound-guided pericardiocentesis.
- ♦ Explain the process of performing paracentesis with ultrasound support.
- ♦ Explain the process of performing ultrasound-guided lumbar puncture.
- ♦ Describe the technique for performing ultrasound-guided drainage and probing.

“

Seize the opportunity and take the step to get up-to-date on the latest developments in the Ultrasonographic Approach to the Major Syndromes and Ultrasound-Guided Procedures”

03

Course Management

This program includes highly regarded health professionals in the field of diagnostic and therapeutic ultrasound in its teaching staff, who bring the experience of their work to this training. In addition, renowned specialists, members of prestigious national and international scientific communities, are involved in designing and preparing the program.

“

Learn the latest advances in the Ultrasonographic Approach to of the Major Syndromes and Ultrasound-Guided Procedures from leading professionals”

Management

Dr. Álvarez Fernández, Jesús Andrés

- Degree in Medicine and Surgery
- Specialist in Intensive Care Medicine.
- Doctor of Medicine (PhD)
- Attending Physician of Intensive Care Medicine and Major Burns Unit. Getafe University Hospital. Getafe, Madrid
- Collaborating Professor of the Master's Degree in Intensive Care Medicine at the CEU Cardenal Herrera University of Valencia.
- Founding Member of the Ecoclub of SOMIAMA.
- Collaborating Professor of SOCANECO.

04

Structure and Content

The structure of the contents has been designed by a team of professionals knowledgeable about the implications of training in daily medical practice, aware of the relevance of current training to adequately perform diagnostic and therapeutic ultrasound procedures and committed to quality teaching through new educational technologies.

“

This Postgraduate Diploma in Ultrasonographic Approach to the Major Syndromes and Ultrasound-Guided Procedures contains the most complete and updated scientific program on the market”

Module 1. Ultrasound imaging

- 1.1. Physical Principles.
 - 1.1.1. Sounds and Ultrasound.
 - 1.1.2. The Nature of Sound.
 - 1.1.3. Interaction of Sound with Matter.
 - 1.1.4. The Concept of Ultrasound.
 - 1.1.5. Ultrasound Safety.
- 1.2. Ultrasound Sequence
 - 1.2.1. Ultrasound Emission.
 - 1.2.2. Tissue Interaction.
 - 1.2.3. Echo Formation.
 - 1.2.4. Echo Reception.
 - 1.2.5. Ultrasound Image Generation.
- 1.3. Ultrasound Modes.
 - 1.3.1. Mode A.
 - 1.3.2. Mode M.
 - 1.3.3. Mode B.
 - 1.3.4. Color Doppler.
 - 1.3.5. Angio-Doppler.
 - 1.3.6. Spectral Doppler.
 - 1.3.7. Combined Modes.
 - 1.3.8. Other Modes and Techniques.
- 1.4. Ultrasound.
 - 1.4.1. Console Ecograph Ultrasound Scanners.
 - 1.4.2. Portable Ecograph Ultrasound scanners
 - 1.4.3. Specialised Ecograph Ultrasound Scanners
 - 1.4.4. Transducers.

- 1.5. Ultrasound Maps and Eco Navigation.
 - 1.5.1. Sagittal Map.
 - 1.5.2. Transverse plane.
 - 1.5.3. Coronal plane
 - 1.5.3. Oblique Maps.
 - 1.5.4. Ultrasound Marking.
 - 1.5.5. Transducer movements

Module 2. Ultrasonographic Approach to the Major Syndromes.

- 2.1. Cardiac Arrest.
 - 2.1.1. Cerebral Hemodynamics.
 - 2.1.2. Brain Damage in Cardiac Arrest.
 - 2.1.3. Usefulness of Ultrasound in Resuscitation.
 - 2.1.4. Usefulness of Ultrasound After Recovery of Spontaneous Circulation.
- 2.2. Shock.
 - 2.2.1. Ventricular Filling Pressure.
 - 2.2.2. Heart Failure.
 - 2.2.3. Prediction of the Hemodynamic response to Intravascular Volume Administration.
 - 2.2.4. Ultrasound Evaluation of Pulmonary Edema.
 - 2.2.5. Ultrasound Search for Sources of Sepsis.
- 2.3. Respiratory Failure.
 - 2.3.1. Acute Respiratory Failure: diagnosis.
 - 2.3.2. Abrupt Hypoxemia in Patients on Mechanical Ventilation.
 - 2.3.3. Monitoring of Recruitment Maneuvers.
 - 2.3.4. Evaluation of Extravascular Lung Water.
- 2.4. Acute Renal Failure.
 - 2.4.1. Hydronephrosis.
 - 2.4.2. Lithiasis.
 - 2.4.3. Acute Tubular Necrosis.
 - 2.4.4. Doppler Ultrasound in Acute Renal Failure.
 - 2.4.5. Seminal Vesicle Ultrasound in Acute Renal Failure.

- 2.5. Trauma.
 - 2.5.1. FAST and e-FAST (Hemo and Pneumothorax)
 - 2.5.2. Ultrasound Evaluation in Special Situations.
 - 2.5.3. Hemodynamic Evaluation Focused on Trauma.
- 2.6. Stroke.
 - 2.6.1. Justification.
 - 2.6.2. Initial Assessment.
 - 2.6.3. Ultrasound Assessment.
 - 2.6.4. Ultrasound-Guided Management.

Module 3. Ultrasound-Guided Procedures

- 3.1. Airway.
 - 3.1.1. Advantages and Disadvantages.
 - 3.1.2. Basic Aspects: Ultrasound Specifications and Ultrasound Anatomy.
 - 3.1.3. Orotracheal Intubation Technique.
 - 3.1.4. Percutaneous Tracheotomy Technique.
 - 3.1.5. Common Problems, Complications, and Practical Advice.
- 3.2. Vascular Cannulation.
 - 3.2.1. Indications and Advantages of the Anatomical Reference Technique.
 - 3.2.2. Current Evidence on Ultrasound-Guided Vascular Cannulation.
 - 3.2.3. Basic Aspects: Ultrasound Specifications and Ultrasound Anatomy.
 - 3.2.4. Ultrasound-Guided Central Venous Cannulation Technique.
 - 3.2.5. Single Peripheral Catheter and Peripherally Inserted Central Catheter (PICC) Cannulation Technique.
 - 3.2.6. Arterial Cannulation Technique.
 - 3.2.7. Implementation of an Ultrasound-Guided Vascular Cannulation Protocol.
 - 3.2.8. Common Problems, Complications, and Practical Advice.
- 3.3. Pericardiocentesis and Thoracentesis.
 - 3.3.1. Indications and Advantages of the Anatomical Reference Technique.
 - 3.3.2. Basic Aspects: Ultrasound Specifications and Ultrasound Anatomy.
 - 3.3.3. Ultrasound Specifications and Pericardial Drainage Technique.
 - 3.3.4. Ultrasound Specifications and Thoracic Drainage Technique.
 - 3.3.5. Common Problems, Complications, and Practical Advice.

- 3.4. Paracentesis.
 - 3.4.1. Indications and Advantages of the Anatomical Reference Technique.
 - 3.4.2. Basic Aspects: Ultrasound Specifications and Ultrasound Anatomy.
 - 3.4.3. Ultrasound Specifications and Technique.
 - 3.4.4. Common Problems, Complications, and Practical Advice.
- 3.5. Lumbar Puncture.
 - 3.5.1. Indications and Advantages of the Anatomical Reference Technique.
 - 3.5.2. Basic Aspects: Ultrasound Specifications and Ultrasound Anatomy.
 - 3.5.3. Techniques
 - 3.5.4. Common Problems, Complications, and Practical Advice.
- 3.6. Other Drainage and Probing.
 - 3.6.1. Suprapubic Probing.
 - 3.6.2. Collection Drainage.
 - 3.6.3. Extraction of Foreign Bodies.

A unique, key, and decisive training experience to boost your professional development”

05

Methodology

This training provides you with a different way of learning. Our methodology uses a cyclical learning approach: ***Re-learning***.

This teaching system is used in the most prestigious medical schools in the world, and major publications such as the ***New England Journal of Medicine*** have considered it to be one of the most effective.

“

Discover Re-learning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

At TECH we use the Case Method

In a given situation, what would you do? Throughout the program you will be presented with multiple simulated clinical cases based on real patients, where you will have to investigate, establish hypotheses and, finally, resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method. Specialists learn better, faster, and more sustainably over time.

With TECH you can experience a way of learning that is shaking the foundations of traditional universities around the world.

According to Dr. Gervas, the clinical case is the annotated presentation of a patient, or group of patients, which becomes a "case", an example or model that illustrates some peculiar clinical component, either because of its teaching potential or because of its uniqueness or rarity. It is essential that the case is based on current professional life, trying to recreate the real conditions in the physician's professional practice.

“

Did you know that this method was developed in 1912 at Harvard for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method”

The effectiveness of the method is justified by four fundamental achievements:

1. Students who follow this method not only grasp concepts, but also develop their mental capacity by evaluating real situations and applying their knowledge.
2. The learning process has a clear focus on practical skills that allow the student to better integrate into the real world.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

Re-learning Methodology

At TECH we enhance the Harvard case method with the best 100% online teaching methodology available: Re-learning.

Our University is the first in the world to combine the study of clinical cases with a 100% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, which represent a real revolution with respect to simply studying and analyzing cases.

The physician will learn through real cases and by solving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.

At the forefront of world teaching, the Re-learning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best Spanish-speaking online university (Columbia University).

With this methodology we have trained more than 250,000 physicians with unprecedented success, in all clinical specialties regardless of the surgical load. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Re-learning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.

In our program, learning is not a linear process, but rather a spiral (we learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by our learning system is 8.01, according to the highest international standards.

In this program you will have access to the best educational material, prepared with you in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is really specific and precise.

This content is then adapted in an audiovisual format that will create our way of working online, with the latest techniques that allow us to offer you high quality in all of the material that we provide you with.

Latest Techniques and Procedures on Video

We introduce you to the latest techniques, to the latest educational advances, to the forefront of current medical techniques. All this, in first person, with the maximum rigor, explained and detailed for your assimilation and understanding. And best of all, you can watch them as many times as you want.

Interactive Summaries

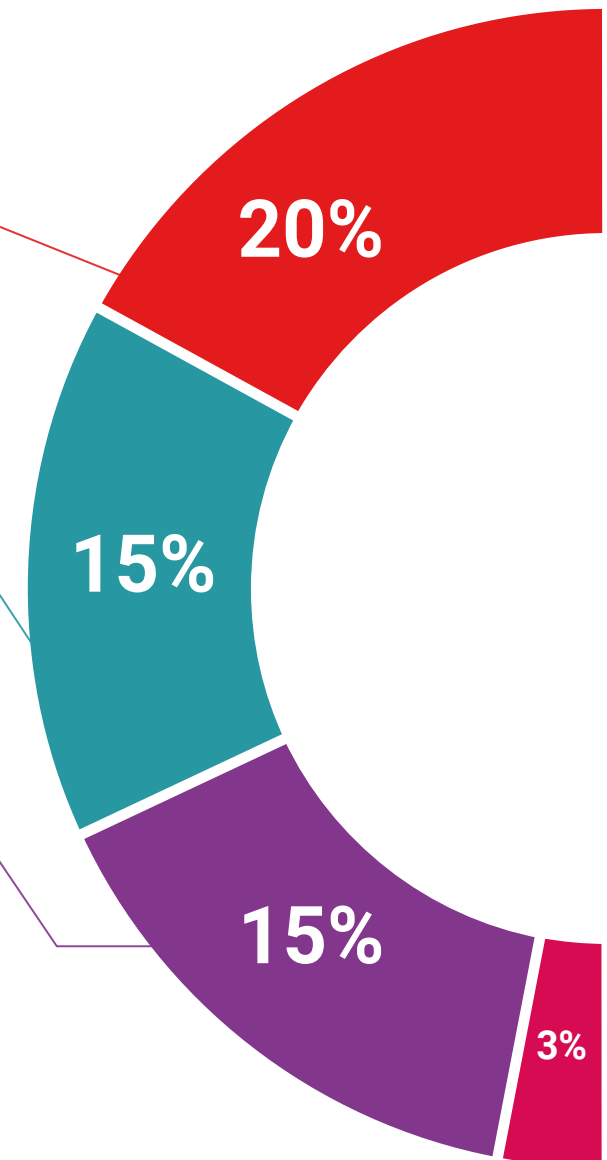

We present the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This unique multimedia content presentation training system was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents, international guides. in our virtual library you will have access to everything you need to complete your training.

Expert-Led Case Studies and Case Analysis

Effective learning ought to be contextual. Therefore, we will present you with real case developments in which the expert will guide you through focusing on and solving the different situations: a clear and direct way to achieve the highest degree of understanding.

Testing & Re-Testing

We periodically evaluate and re-evaluate your knowledge throughout the program, through assessment and self-assessment activities and exercises: so that you can see how you are achieving your goals.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an expert strengthens knowledge and memory, and generates confidence in our difficult future decisions.

Quick Action Guides

We offer you the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical, and effective way to help you progress in your learning.

06 Certificate

The Postgraduate Diploma in Ultrasonographic Approach to the Major Syndromes and Ultrasound-Guided Procedures guarantees you, in addition to the most rigorous and updated training, access to a Postgraduate Diploma issued by **TECH Technological University**.

“

Successfully complete this training and receive your university degree without travel or laborious paperwork”

This **Postgraduate Diploma in Ultrasonographic Approach to the Major Syndromes and Ultrasound-Guided Procedures** contains the most complete and up-to-date scientific program on the market.

After the student has passed the assessments, they will receive their corresponding **Postgraduate Diploma** issued by **TECH Technological University** via tracked delivery*.

The certificate issued by **TECH Technological University** will reflect the qualification obtained in the Postgraduate Diploma, and meets the requirements commonly demanded by labor exchanges, competitive examinations, and professional career evaluation committees.

Title: **Postgraduate Diploma in Ultrasonographic Approach to the Major Syndromes and Ultrasound-Guided Procedures**

Official N° of hours: **450 h.**

*Apostille Convention. In the event that the student wishes to have their paper certificate issued with an apostille, TECH EDUCATION will make the necessary arrangements to obtain it, at an additional cost.
