# Introduction

Research is understood as the basis for the development of new products, services and processes. At present, all of them integrate new technologies, as they have opened up a range of possibilities applicable to all fields. In medicine, the processing of COVID data and the public and private research that led to the health crisis was an important factor in controlling the pandemic. Thanks to scientific studies, the disease could be diagnosed simply by knowing its symptoms, and a vaccine against the virus was developed. Therefore, the clinical market needs, now more than ever, experts who have mastered the new screening techniques. TECH Technological University offers a program that goes in depth into statistics and R in health research, graphic representations and the dissemination of analyses. A 100% online program focused on updating the skills of specialists in this sector.

“

*Thanks to this Professional Master's Degree, you will update all your knowledge about medical and biomedical research to offer a service adapted to the digital paradigm"*

Given the proliferation of diseases that have affected the world, medical science is faced with a largely unknown paradigm. In the face of this uncertainty, healthcare professionals can only respond with more thorough research, for which it will be imperative that agents have all the advanced knowledge in the development of their work. Without forgetting that science would not be useful without the comparison of studies and, above all, the dissemination of their findings.

During the course of this program, the medical professionals will be introduced to all the phases of scientific and health research, from the creation of working groups, through clinical trials and project financing, to the dissemination of the results, through reports, articles and specific memories. In addition, thanks to TECH Technological University, the professionals will respond to the great personnel demand presented by the current clinical market. All this, so that the specialists incorporate the use of *Big Data* in their public and private service, being aware of the latest positive evidence in this field.

A 100% online Professional Master's Degree that allows you to balance the study of this program with the development of your personal and professional life, without having to do without either of them. In addition, the *Relearning* methodology applied by TECH Technological University makes students forget about long hours of memorization and assimilate the contents in a gradual and simple way. An academic learning that aims to provide students with a broad update of knowledge.

This **Professional Master's Degree in Medical Research** contains the most complete and up-to-date scientific program on the market. The most important features include:

- ♦ Case studies presented by experts in Health Sciences Research
- ♦ The graphic, schematic, and practical contents with which they are created, provide scientific and practical information on the disciplines that are essential for professional practice
- ♦ Practical exercises where the self-assessment process can be carried out to improve learning
- ♦ Its special emphasis on innovative methodologies
- ♦ Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ♦ Content that is accessible from any fixed or portable device with an Internet connection

*Stand out in an industry in constant change due to the incorporation of new technologies in the medical field"*

“

*Obtain all the keys to graphical representations of data in health research and other analysis you carry out, so you can compare different methods with dissemination tools”*

The program's teaching staff includes professionals from the sector who contribute their work experience to this educational program, as well as renowned specialists from leading societies and prestigious universities.

The multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide immersive education programmed to learn in real situations.

This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise during the academic year. For this purpose, the student will be assisted by an innovative interactive video system created by renowned and experienced experts.

*Boost your career by developing research projects that meet the demands of today's health science paradigm.*

*Upgrade your skills in collaborative research and attend to the essential threads to start an optimal research work.*

# 02 Objectives

The main objective of the Professional Master's Degree in Medical Research is to update the knowledge of medical professionals and other specialists interested in this discipline. Throughout the 12 months of study, the student will delve into collaborative research, clinical trials in health, statistics and R in health research, as well as the dissemination of results and their graphic representations, among many other issues. This is a complete and rigorous academic program that takes care of its design, structure and content so that the students can enjoy a program adapted to their needs.

“

*Big Data is here to stay, would you like to be part of the group of doctors who master it? Achieve it by taking this 100% online program"*

## General Objectives

---

- ♦ Understand the appropriate approach to a question or problem to be solved
- ♦ Asses the state of the art of the problem through literature search
- ♦ Assess the feasibility of the potential project
- ♦ Study the drafting of a project in accordance with the different calls for proposals
- ♦ Examine the search for funding
- ♦ Master the necessary data analysis tools
- ♦ Write scientific articles (papers) according to the daily magazines
- ♦ Generate posters relevant to the units covered
- ♦ Know the tools for dissemination to the non-specialized public
- ♦ Delve into data protection
- ♦ Understand the transfer of knowledge generated to industry or the clinic
- ♦ Examine the current use of artificial intelligence and massive data analysis
- ♦ Study examples of successful projects

## Specific Objectives

---

### **Module 1. The Scientific Method Applied to Health Research. Bibliographic Positioning of the Research**

- ♦ Become familiar with the scientific method to be followed to carry out health research
- ♦ Learn the correct way to ask a question and the methodology to follow to achieve the best possible answer
- ♦ Delve into learning how to search for bibliographic methods
- ♦ Master all the concepts of scientific activity

### **Module 2. Generation of Working Groups: Collaborative Research**

- ♦ Learn how to create working groups
- ♦ Create new biomedical research spaces
- ♦ Permanent collaboration with other research areas

### **Module 3. Generation of Research Projects**

- ♦ Learn how to assess the feasibility of the potential project
- ♦ Delve into the essential milestones for writing a research project
- ♦ Delve into the criteria for exclusion/inclusion in projects
- ♦ Learn how to set up the specific team for each project

### **Module 4. The Clinical Trial in Health Research**

- ♦ Recognize the main figures involved in clinical trials
- ♦ Learn how to generate protocols
- ♦ Maintain a good documentation management

**Module 5. Project Financing**

- ♦ Have an in-depth knowledge of the sources of funding
- ♦ In-depth knowledge of the different calls for proposals
- ♦ Prepare a quote to know the total price of the research

**Module 6. Statistics and R in Health Research**

- ♦ Describe the main concepts of biostatistics
- ♦ Learn how to use the R program
- ♦ Define and understand the regression method and multivariate analysis with R
- ♦ Recognize the concepts of statistics applied to research
- ♦ Describe the statistical techniques of *Data Mining*
- ♦ Provide knowledge of the most commonly used statistical techniques in biomedical research

**Module 7. Graphical Representations of Data in Health Research and Other Advanced Analysis**

- ♦ Master the tools of computational statistics
- ♦ Learn to generate graphs for the visual interpretation of data obtained in research project
- ♦ Delve into the dimensionality reduction methods
- ♦ Delve into the comparison of methods

**Module 8. Dissemination of Results I, Reports, Memos and Scientific Articles**

- ♦ Learn the various ways of disseminating results
- ♦ Internalize how to write reports
- ♦ Learn how to write for a specialized journal

**Module 9. Dissemination of Results II, Symposiums, Congresses, dissemination to Society**

- ♦ Learn how to generate a poster at a congress
- ♦ Learn how to prepare different communications of different times
- ♦ Learning how to turn a scientific paper into dissemination material

**Module 10. Protection and Transfer of Results**

- ♦ Introduction to the world of results protection
- ♦ Delve into patents and similar
- ♦ Delve into the possibilities of company creation

*Achieve your objectives thanks to efficient pedagogical tools and base your medical performance on the most up-to-date health knowledge"*

# 03 Skills

This program has been developed in a disciplined manner so that, from the beginning, students have a comprehensive update on the bibliographic use of health research. TECH Technological University has put the collaboration of experienced teachers into the syllabus so that specialists can get the most out of this program. In addition, thanks to the intensive study of research projects, the professionals will be able to accurately assess the results of scientific research so that they can later manage the new methods of dissemination of scientific information in the field of health.

*Thanks to this Professional Master's Degree, you will position yourself at the forefront of the clinical labor market with the keys to financing research projects"*

## General Skills

---

- ♦ Design and write research projects in health sciences
- ♦ Use the information in documentary databases in the field of health sciences for the bibliographic support of a research project
- ♦ Perform the processing of the results obtained with statistical tools, massive data analysis and computational statistics
- ♦ Manage at an advanced user level statistical packages for the treatment of the information collected in research in the field of health sciences
- ♦ Generate graphs from the data obtained in a project
- ♦ Disseminate the results
- ♦ Perform the appropriate protection/transfer of the data generated
- ♦ Make critical and reasoned judgments on the validity and reliability of scientific information in the health field

## Specific Skills

---

- ♦ Master the new spaces for health research
- ♦ Manage the different phases of clinical trials
- ♦ Manage the strategy for participation in international projects
- ♦ Generate specific project formats for funding in different calls for proposals
- ♦ Explore regression methods applied to research
- ♦ Master the tools of computational statistics
- ♦ Generate graphs for visual data interpretation of data obtained in research projects
- ♦ Manage scientific reports and articles
- ♦ Disseminate data obtained to non-specialized audiences
- ♦ Value the results of a research project

*Do you want to delve into popular science and new methods of documentation? Do it now without abandoning other aspects of your life, thanks to the flexible program offered by TECH Technological University"*

# 04

# Course Management

In its line of academic rigor, TECH Technological University has narrowly selected a teaching team versed in medicine and with numerous research projects. This is a group of professionals who have received recognition for their clinical work and who are also experts in *AI*, *Big Data* and platforms applied to the healthcare field. Thanks to this, students will not only have theoretical knowledge through the Virtual Campus, but will also have the advice and guidelines of experts based on professional development in the scenario of medical action. It is therefore a unique opportunity for medical specialists to update their knowledge with the support of model doctors.

“

*Don't wait any longer, join now to have the guidance of a teaching staff that has developed for years in the front ranks of scientific research applied to the healthcare sector"*

## Management

### Dr. López-Collazo, Eduardo

- ♦ Scientific Deputy Director in the Institute for Health Research the Health Research Institute of La Paz University Hospital
- ♦ Head of the Department of Immune Response and Infectious Diseases at IdiPAZ
- ♦ Head of the Department of Immune Response, Tumors and Immunology at IdiPAZ
- ♦ President of the IdiPAZ Research Commission
- ♦ Sponsor of the External Scientific Committee of the Murcian Institute of Health Research
- ♦ Member of the Scientific Commission of FIDE
- ♦ Editor of the international scientific journal "Mediators of Inflammation"
- ♦ Editor of the international scientific journal "Frontiers of Immunology"
- ♦ Coordinator of IdiPAZ Platforms
- ♦ Coordinator of Health Research Funds in the areas of Cancer, Infectious Diseases and HIV
- ♦ PhD in Nuclear Physics, University of La Habana
- ♦ Doctorate in Pharmacy from the Complutense University of Madrid

## Professors

### Dr. Martín Quirós, Alejandro

- ♦ Head for Urgent Pathology of La Paz University Hospital
- ♦ Director of the Urgent and Emergent Pathology Research Group of the Research Institute of the University Hospital La Paz
- ♦ Secretary of the Teaching Commission of the Research Institute of La Paz University Hospital
- ♦ Assistant of Internal Medicine/Infectious Diseases of the High-Level Isolation Unit of the University Hospital La Paz - At Hospital Carlos III
- ♦ Internist at Olympia Quirón Hospital

### Mr. Arnedo Abade, Luis

- ♦ Data & Analyst Manager
- ♦ Data Scientist & Analyst Manager in Industrias Arnedo
- ♦ Data & Analyst Manager in Boustique Perfumes
- ♦ Data Scientist & Analyst Manager in Darecod
- ♦ Postgraduate Certificate in Statistics
- ♦ Psychology Graduate

**Dr. Gómez Campelo, Paloma**

- ♦ Researcher at the Instituto de Investigación Sanitaria, Hospital Universitario La Paz
- ♦ Deputy Technical Director of the Health Research Institute of La Paz University Hospital
- ♦ Director of the Biobank of the Health Research Institute of the University Hospital La Paz
- ♦ Collaborating Teacher of the Polytechnic University of Catalonia
- ♦ Doctorate in Psychology the Complutense University of Madrid
- ♦ Degree in Psychology from the Complutense University Madrid

**Dr. Pascual Iglesias, Alejandro**

- ♦ Bioinformatics Platform Coordinator, La Paz Hospital
- ♦ Advisor to the COVID-19 Expert Committee of Extremadura
- ♦ Researcher in Eduardo López-Collazo's innate immune response research group, Instituto de Investigación Sanitarias University Hospital La Paz
- ♦ Researcher in the coronavirus research group of Luis Enjuanes, National Center of Biotechnology CNB-CSIC
- ♦ Coordinator of Continuing Education in Bioinformatics, Health Research Institute of the University Hospital La Paz
- ♦ Cum Laude Doctor in Molecular Biosciences from the Autonomous University of Madrid
- ♦ Degree in Biology Molecular from the University of Salamanca
- ♦ Professional Master's Degree in Cellular and Molecular Physiopathology and Pharmacology from the Universidad of Salamanca

**Dr. Avendaño Ortiz, José**

- ♦ "Sara Borrell" Researcher Foundation for Biomedical Research of the Ramón y Cajal University Hospital (FIBioHRC/IRyCIS)
- ♦ Researcher Foundation for Biomedical Research of La Paz University Hospital (FIBHULP/IdiPAZ)
- ♦ Researcher HM Hospitals Foundation (FiHM)
- ♦ Graduate in Biomedical Sciences from the University of Lleida
- ♦ Master's Degree in pharmacological research from the Autonomous University of Madrid
- ♦ PhD in Pharmacology and Physiology from the Autonomous University of Madrid

**Dr. del Fresno, Carlos**

- ♦ Researcher Specialist in Biochemistry, Molecular Biology and Biomedicine
- ♦ "Michael Servetus" Researcher. Group Leader, Research Institute of the Hospital la Paz (IdiPAZ)
- ♦ Researcher Spanish Association Against Cancer (AECC), National Center for Cardiovascular Research (CNIC- ISCIII)
- ♦ Researcher, National Center for Cardiovascular Research (CNIC- ISCIII)
- ♦ "Sara Borrell" Researcher, National Biotechnology Center (CNIC - ISCIII)
- ♦ PhD in Biochemistry, Molecular Biology and Biomedicine, Autonomous University of Madrid
- ♦ Degree in Biology from the Complutense University of Madrid

# 05

# Structure and Content

The content of this Professional Master's Degree in Medical Research has been carefully developed by TECH Technological University with the support of a team of doctors and experts in Medical Research. In addition, the TECH has applied numerous educational tools that dynamize the study to motivate professionals to investigate their discipline with the latest techniques. One of them is the Relearning methodology, which exempts students from long hours of memorization, allowing them to assimilate the syllabus in a simple and gradual manner. In addition, TECH Technological University offers hours of audiovisual materials in different formats: video summaries, activities, self-tests, explanatory videos, etc. All this, so that, from the first module, the specialists become familiar with the scientific method to follow to carry out health research.

“

*A structured syllabus so that you can update your knowledge of Data as you move into the labor market"*

## Module 1. The Scientific Method Applied to Health Research. Bibliographic Positioning of the Research

- 1.1. Definition of the Question or Problem to be Solved
- 1.2. Bibliographic Positioning of the Question or Problem to be Solved
  - 1.2.1. Information Search
    - Strategies and Keywords Pubmed and Other Repositories of Scientific Articles
  - 1.2.2. Pubmed and Other Repositories of Scientific Articles
- 1.3. Treatment of Bibliographic Sources
- 1.4. Treatment of Documentary Sources
- 1.5. Advanced Bibliography Search
- 1.6. Generation of Reference Bases for Multiple Use
- 1.7. Bibliography Managers
- 1.8. Extraction of Metadata in Bibliographic Searches
- 1.9. Definition of the Scientific Methodology to be Followed
  - 1.9.1. Selection of the Necessary Tools
  - 1.9.2. Design of Positive and Negative Controls in an Investigation
- 1.10. Translational Projects and Clinical Trials: Similarities and Differences

## Module 2. Generation of Working Groups: Collaborative Research

- 2.1. Definition of Working Groups
- 2.2. Formation of Multidisciplinary Teams
- 2.3. Optimal Distribution of Responsibilities
- 2.4. Leadership
- 2.5. Control of Activities Achievement
- 2.6. Hospital Research Teams
  - 2.6.1. Clinical Research
  - 2.6.2. Basic Research
  - 2.6.3. Translational Research
- 2.7. Creation of Collaborative Networks for Health Research
- 2.8. New Spaces for Health Research
  - 2.8.1. Thematic Networks
- 2.9. Networked Biomedical Research Centers
- 2.10. Biobanks of Samples: International Collaborative Research

### Module 3. Generation of Research Projects

- 3.1. General Structure of a Project
- 3.2. Presentation of Background and Preliminary Data
- 3.3. Definition of the Hypothesis
- 3.4. Definition of General and Specific Objectives
- 3.5. Definition of the Type of Sample, Number and Variables to be Measured
- 3.6. Establishment of the Scientific Methodology
- 3.7. Exclusion/Inclusion Criteria in Projects with Human Samples
- 3.8. Establishment of the Specific Team: Balance and Expertise
- 3.9. Expectations: An Important Element that we Forget
- 3.10. Budget Generation: a fine Tuning Between the Needs and the Reality of the Call
- 3.11. Ethical Aspects

### Module 4. The Clinical Trial in Health Research

- 4.1. Types of Clinical Trials (CT)
  - 4.1.1. Clinical Trials Promoted by the Pharmaceutical Industry
  - 4.1.2. Independent Clinical Trials
  - 4.1.3. Drug Replacement
- 4.2. Phases of CE
- 4.3. Main Figures Involved in CE5
- 4.4. Generation of Protocols
  - 4.4.1. Randomization and Masking
  - 4.4.2. Non-Inferiority Studies
- 4.5. Ethical Aspects
- 4.6. Patient Information Sheet
- 4.7. Informed Consent
- 4.8. Good Clinical Practice Criteria
- 4.9. Drug Research Ethics Committee
- 4.10. Search for Funding for Clinical Trials
  - 4.10.1. Public. Main Spanish, European, Latin American and U.S. Agencies
  - 4.10.2. Private. Main Pharmaceutical Companies

## Module 5. Project Financing

- 5.1. Search for Financing Opportunities
- 5.2. How to Adjust a Project to the Format of a Call for Proposals?
  - 5.2.1. Keys to Success
  - 5.2.2. Positioning, Preparation and Writing
- 5.3. Public Calls for Proposals. Main European and American Agencies
- 5.4. Specific European Calls for Proposals
  - 5.4.1. Horizon 2020 Projects
  - 5.4.2. Human Resources Mobility
  - 5.4.3. Madame Curie Program
- 5.5. Intercontinental collaboration Calls: Opportunities for International Interaction
- 5.6. Calls for Collaboration with the United States
- 5.7. Strategy for Participation in International Projects
  - 5.7.1. How to Define a Strategy for Participation in International Consortia
  - 5.7.2. Support and Assistance Structures
- 5.8. International Scientific Lobbying
  - 5.8.1. Access and Networking
- 5.9. Private Calls for Proposals
  - 5.9.1. Foundations and Funding Organizations for Health Research in Europe and the Americas
  - 5.9.2. Private Funding Calls for Proposals from U.S. Organizations
- 5.10. Securing the Loyalty of a Funding Source: Keys to Lasting Financial Support

## Module 6. Statistics and R in Health Research

- 6.1. Biostatistics
  - 6.1.1. Introduction to The Scientific Method
  - 6.1.2. Population and Sample. Sampling Measures of Centralization
  - 6.1.3. Discrete Distributions and Continuous Distributions
  - 6.1.4. General Outline of Statistical Inference. Inference about a Normal Population Mean. Inference about a General Population Mean
  - 6.1.5. Introduction to Nonparametric Inference

- 6.2. Introduction to R
  - 6.2.1. Basic Features of the Program
  - 6.2.2. Main Object Types
  - 6.2.3. Simple Examples of Simulation and Statistical Inference
  - 6.2.4. Graphs
  - 6.2.5. Introduction to R Programming
- 6.3. Regression Methods with R
  - 6.3.1. Regression Models
  - 6.3.2. Variable Selection
  - 6.3.3. Model Diagnosis
  - 6.3.4. Treatment of Outliers
  - 6.3.5. Regression Analysis
- 6.4. Multivariate Analysis with R
  - 6.4.1. Description of Multivariate Data
  - 6.4.2. Multivariate Distributions
  - 6.4.3. Dimension Reduction
  - 6.4.4. Unsupervised Classification: Cluster Analysis
  - 6.4.5. Supervised Classification: Discriminant Analysis
- 6.5. Regression Methods for Research with R
  - 6.5.1. Generalized Linear Models (GLM): Poisson Regression and Negative Binomial Regression
  - 6.5.2. Generalized Linear Models (GLM): Logistic and Binomial Regressions
  - 6.5.3. Poisson and Negative Binomial Regression Inflated by Zeros
  - 6.5.4. Local Fits and Generalized Additive Models (GAMs)
  - 6.5.5. Generalized Mixed Models (GLMM) and Generalized Additive Mixed Models (GAMM)
- 6.6. Statistics Applied to Biomedical Research with R
  - 6.6.1. Basic Notions of R. Variables and Objects in R. Data handling. Files Graphs
  - 6.6.2. Descriptive Statistics and Probability Functions
  - 6.6.3. Programming and Functions in R
  - 6.6.4. Contingency Table Analysis
  - 6.6.5. Basic Inference with Continuous Variables

- 6.7. Statistics Applied to Biomedical Research with R II
  - 6.7.1. Analysis of Variance
  - 6.7.2. Correlation Analysis
  - 6.7.3. Simple Linear Regression
  - 6.7.4. Multiple Linear Regression
  - 6.7.5. Logistic Regression
- 6.8. Statistics Applied to Biomedical Research with R III
  - 6.8.1. Confounding Variables and Interactions
  - 6.8.2. Construction of a Logistic Regression Model
  - 6.8.3. Survival Analysis
  - 6.8.4. Cox Regression
  - 6.8.5. Predictive Models. ROC Curve Analysis
- 6.9. Statistical *Data Mining* Techniques with R I
  - 6.9.1. Introduction. *Data Mining*. Supervised and Unsupervised Learning. Predictive Models. Classification and Regression
  - 6.9.2. Descriptive Analysis. Data Pre-Processing
  - 6.9.3. Principal Component Analysis (PCA)
  - 6.9.4. Cluster Analysis. Hierarchical Methods. K-Means
- 6.10. Statistical *Data Mining* Techniques with R II
  - 6.10.1. Model Assessment Measures. Predictive Ability Measures. ROC Curves
  - 6.10.2. Models Assessment Techniques. Cross-Validation. Bootstrap Samples
  - 6.10.3. Tree-Based Methods (CART)
  - 6.10.4. *Support Vector Machines* (SVM)
  - 6.10.5. *Random Forest* (RF) and Neural Networks (NN)

## Module 7. Graphical Representations of Data in Health Research and Other Advanced Analysis

- 7.1. Types of Graphs
- 7.2. Survival Analysis
- 7.3. ROC Curves
- 7.4. Multivariate Analysis (Types of Multiple Regression)
- 7.5. Binary Regression Models
- 7.6. Massive Data Analysis
- 7.7. Dimensionality Reduction Methods

- 7.8. Comparison of Methods: PCA, PCCA and KPCA
- 7.9. T-SNE (t-Distributed Stochastic Neighbor Embedding)
- 7.10. UMAP (Uniform Manifold Approximation and Projection)

## Module 8. Dissemination of Results I, Reports, Memos and Scientific Articles

- 8.1. Generating a Scientific Report or Memory of a Project
  - 8.1.1. Optimal Approach to the Discussion
  - 8.1.2. Presentation of the Limitations
- 8.2. Generation of a Scientific Article: How to Write a "*Paper* on the " Basis of the Data Obtained?
  - 8.2.1. General Structure
  - 8.2.2. Where does the *Paper* Go?
- 8.3. Where to Start?
  - 8.3.1. Adequate Representation of the Results
- 8.4. The Introduction: The Mistake of Starting with this Section
- 8.5. The Discussion: The Cusp Moment
- 8.6. The Description of Materials and Methods: The Guaranteed Reproducibility
- 8.7. Choice of the Journal where the *Paper* is to be submitted
  - 8.7.1. Choice Strategy
  - 8.7.2. Priority List
- 8.8. Adaptation of the Manuscript to the Different Formats
- 8.9. The "*Cover Letter*": Concise Presentation of the Study to the Editor
- 8.10. How to Respond to Reviewers' Doubts? The Rebuttal Letter

## Module 9. Dissemination of Results II, Symposiums, Congresses, Dissemination to the Society

- 9.1. Presentation of Results at Congresses and Symposia
  - 9.1.1. How is a Poster Generated?
  - 9.1.2. Data Representation
  - 9.1.3. Focusing the Message
- 9.2. Short Communications
  - 9.2.1. Data Representation for Short Communications
  - 9.2.2. Focusing the Message

- 9.3. The Plenary Lecture: Notes on How to Keep the Attention of the Specialized Audience for More than 20 Minutes
- 9.4. Dissemination to the General Public
  - 9.4.1. Need Vs. Opportunity
  - 9.4.2. Use of References
- 9.5. Use of Social Networks for the Dissemination of Results
- 9.6. How to Adapt Scientific Data to the Popular Language?
- 9.7. Hints for Summarizing a Scientific Paper in a Few Characters
  - 9.7.1. Instant Dissemination via Twitter
- 9.8. How to turn a Scientific Paper into a Popularization Material
  - 9.8.1. Podcast
  - 9.8.2. YouTube Videos
  - 9.8.3. Tik Tok
  - 9.8.4. Comic Book
- 9.9. Popular Literature
  - 9.9.1. Columns
  - 9.9.2. Books

## Module 10. Protection and Transfer of Results

- 10.1. Protection of Results: General Aspects
- 10.2. Valorization of the Results of a Research Project
- 10.3. Patents: Pros and Cons
- 10.4. Other Forms of Protection of Results
- 10.5. Transfer of Results to Clinical Practice
- 10.6. Transfer of Results to Industry
- 10.7. The Technology Transfer Contract
- 10.8. Trade Secrets
- 10.9. Generation of Companies *Spin-Off* from a Research Project
- 10.10. Search for Investment Opportunities in companies *Spin-Off*

“

*A program designed for professionals like you, who seek to improve their performance in health research, applying scientific methods”*

06

# Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

*Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"*

## At TECH we use the Case Method

What should a professional do in a given situation? Throughout the program, students will face multiple simulated clinical cases, based on real patients, in which they will have to do research, establish hypotheses, and ultimately resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method. Specialists learn better, faster, and more sustainably over time.

*With TECH you will experience a way of learning that is shaking the foundations of traditional universities around the world.*

According to Dr. Gérvas, the clinical case is the annotated presentation of a patient, or group of patients, which becomes a "case", an example or model that illustrates some peculiar clinical component, either because of its teaching power or because of its uniqueness or rarity. It is essential that the case is based on current professional life, trying to recreate the real conditions in the physician's professional practice.

“

*Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method”*

The effectiveness of the method is justified by four fundamental achievements:

1. Students who follow this method not only achieve the assimilation of concepts, but also a development of their mental capacity, through exercises that evaluate real situations and the application of knowledge.
2. Learning is solidly translated into practical skills that allow the student to better integrate into the real world.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

## Relearning Methodology

At TECH we enhance the case method with the best 100% online teaching methodology available: Relearning.

This university is the first in the world to combine the study of clinical cases with a 100% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, a real revolution with respect to the mere study and analysis of cases.

*Professionals will learn through real cases and by resolving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.*

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

With this methodology, more than 250,000 physicians have been trained with unprecedented success in all clinical specialties regardless of surgical load. Our pedagogical methodology is developed in a highly competitive environment, with a university student body with a strong socioeconomic profile and an average age of 43.5 years old.

*Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.*

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by TECH's learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

#### Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

#### Surgical Techniques and Procedures on Video

TECH introduces students to the latest techniques, the latest educational advances and to the forefront of current medical techniques. All of this in direct contact with students and explained in detail so as to aid their assimilation and understanding. And best of all, you can watch the videos as many times as you like.

#### Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

#### Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

#### Expert-Led Case Studies and Case Analysis

Effective learning ought to be contextual. Therefore, TECH presents real cases in which the expert will guide students, focusing on and solving the different situations: a clear and direct way to achieve the highest degree of understanding.

#### Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

#### Classes

There is scientific evidence on the usefulness of learning by observing experts. The system known as Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

#### Quick Action Guides

TECH offers the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical, and effective way to help students progress in their learning.
