Introduction

It is becoming more and more frequent and necessary to continue incorporating in society the sensitivity, values and interest in achieving a more humane and sustainable environment. In recent years, essential issues such as climate change, disaster risk reduction, biodiversity, poverty reduction and sustainable consumption have been incorporated into the speeches of the competent authorities and representatives of institutions such as NGOs, proposing diverse solutions that must be applied jointly. Therefore, education is an indispensable factor and this exclusive academic program at TECH is oriented towards the Nursing professional who wishes to broaden his or her field of action. It is an update of knowledge and skills in 100% online mode, in which the most experienced teachers have participated.

“

This Postgraduate Certificate in Human and Sustainable Development Education for Nursing will be a unique and cutting-edge update that will complete your curriculum”

Organizations such as UNESCO have highlighted the importance of Education for Sustainable Development as a response to the most urgent and in many cases silent but devastating challenges that the planet is facing. There are many actions that humans are taking that endanger their own survival on this planet and that are difficult to reverse, such as climate change, for example.

Therefore, it is crucial to carry out programs of Education for Human and Sustainable Development that can be applied in all professional sectors. In this case, TECH has developed this Postgraduate Certificate that contemplates the health sector and its Nursing personnel, who are an important part of making international cooperation projects for development possible.

A complete curriculum that includes an approach to the 2030 Agenda, which aims to achieve the personal and social transformation necessary to change the course of the crisis that humanity could face. In addition, it will delve into the current trends in Humanitarian Action in the international context, its areas of intervention and the Gender approach in International Cooperation for Development.

In addition, this program emphasizes the crisis of Human Mobility and Migration in the world, analyzing the causes and processes of Migration in the Age of Globalization. Within this same approach, it will address the before and after of Development Education and intervention strategies in a global society.

An academic program that has been designed for nurses who wish to broaden their intellectual background towards this humanitarian work and carry out International Cooperation projects. Thus, at the end of 12 weeks, you will complete this update through a high quality learning, under a modern teaching dynamic 100% online.

TECH presents a Postgraduate Certificate based on the most modern aspects of Human and Sustainable Development Education for Nursing. Enroll now and get to know a new way of studying"

05

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization”

At TECH Nursing School we use the Case Method

In a given situation, what should a professional do? Throughout the program, students will face multiple simulated clinical cases, based on real patients, in which they will have to do research, establish hypotheses, and ultimately resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method. Nurses learn better, faster, and more sustainably over time.

With TECH, nurses can experience a learning methodology that is shaking the foundations of traditional universities around the world.

According to Dr. Gérvas, the clinical case is the annotated presentation of a patient, or group of patients, which becomes a “case”, an example or model that illustrates some peculiar clinical component, either because of its teaching power or because of its uniqueness or rarity. It is essential that the case is based on current professional life, in an attempt to recreate the real conditions in professional nursing practice.

“

Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method”

The effectiveness of the method is justified by four fundamental achievements:

1. Nurses who follow this method not only grasp concepts, but also develop their mental capacity, by evaluating real situations and applying their knowledge.
2. The learning process has a clear focus on practical skills that allow the nursing professional to better integrate knowledge acquisition into the hospital setting or primary care.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

Relearning Methodology

At TECH we enhance the case method with the best 100% online teaching methodology available: Relearning.

This university is the first in the world to combine case studies with a 100% online learning system based on repetition combining a minimum of 8 different elements in each lesson, which is a real revolution compared to the simple study and analysis of cases.

The nurse will learn through real cases and by solving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

With this methodology we have trained more than 175,000 nurses with unprecedented success in all specialities regardless of practical workload. Our pedagogical methodology is developed in a highly competitive environment, with a university student body with a strong socioeconomic profile and an average age of 43.5 years old.

Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by TECH's learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is really specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Nursing Techniques and Procedures on Video

We introduce you to the latest techniques, to the latest educational advances, to the forefront of current medical techniques. All of this in direct contact with students and explained in detail so as to aid their assimilation and understanding. And best of all, you can watch them as many times as you want.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Expert-Led Case Studies and Case Analysis

Effective learning ought to be contextual. Therefore, TECH presents real cases in which the expert will guide students, focusing on and solving the different situations: a clear and direct way to achieve the highest degree of understanding.

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful. Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Quick Action Guides

TECH offers the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical, and effective way to help students progress in their learning.
