## Public Health Surveillance for Nursing

## Postgraduate Diploma Public Health Surveillance for Nursing

- » Modality: online
- » Duration: 6 months
- » Certificate: TECH Global University
- » Accreditation: 18 ECTS
- » Schedule: at your own pace
- » Exams: online

# Introduction

New Industry 4.0 technologies have had a significant impact in the field of Public Health Surveillance, providing professionals with advanced methods of data collection and analysis. An example of this are the Self-Monitoring Systems, which allow internal controls to be maintained to ensure quality and safety in clinical practice. In this context, Nursing professionals must adapt to these technological changes effectively and develop new competencies to play their role effectively. For this reason, TECH is developing a cutting-edge university program focused on the integration of technology into nursing practice. In addition, it is delivered in a flexible and convenient 100% online modality.

“

*Thanks to this 100% online program, you will carry out health promotion and education campaigns aimed at different audiences”*

Public Health Surveillance is a fundamental aspect of identifying and controlling infectious and chronic diseases globally. In this regard, a recent World Health Organization report reveals that approximately 1.5 million people have died from Tuberculosis in recent years.

This underlines the importance of effective surveillance for its control.

In this regard, nurses play a key role in the collection and analysis of epidemiological data. They must therefore interpret this information accurately to understand disease dynamics and plan effective care.

In this scenario, TECH implements a pioneering program in Public Health Surveillance for Nursing.

The academic itinerary will delve into the management of the most innovative self-monitoring systems, paying attention to factors such as critical control points, the establishment of preventive protocols or risk assessment. Likewise, the syllabus will delve into the procedures that nurses must follow when faced with alerts, epidemic outbreaks and emergencies. The didactic materials will also analyze a variety of techniques to prevent both communicable and non-communicable diseases, with emphasis on cancer. In this way, graduates will develop advanced competencies to monitor the status of individuals and plan programs to promote optimal Public Health.

In addition, the program is delivered entirely online so that nurses can customize their study time. In addition, TECH employs its innovative learning system: Relearning.

This allows professionals to consolidate the concepts of the syllabus in a progressive and natural way, without the need to resort to costly techniques such as traditional memorization.

To access the Virtual Campus, all they need is an electronic device with an Internet connection. In this way, graduates will be able to enjoy the most dynamic educational resources on the market and experience a significant quality leap in their professional careers.

This **Postgraduate Diploma in Public Health Surveillance for Nursing** contains the most complete and up-to-date scientific program on the market. The most important features include:

- ♦ The development of practical case studies presented by experts in Public Health and Health Management.
- ♦ The graphic, schematic and practical contents with which it is conceived provide scientific and practical information on those disciplines that are essential for professional practice
- ♦ Practical exercises where self-assessment can be used to improve learning
- ♦ Its special emphasis on innovative methodologies
- ♦ Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ♦ Content that is accessible from any fixed or portable device with an Internet connection

*This university program will equip you with the resources you need to overcome future challenges in Public Health Surveillance”*

“

*You will delve into the latest advances in Pharmacovigilance Monitoring Systems and be able to identify signals of potential risks associated with medicines”*

The program's teaching staff includes professionals from the sector who contribute their work experience to this specializing program, as well as renowned specialists from leading societies and prestigious universities.

The multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide immersive education programmed to learn in real situations.

This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise during the course. For this purpose, students will be assisted by an innovative interactive video system created by renowned and experienced experts.

*You will acquire a comprehensive approach aimed at the prevention of chronic diseases, which will allow you to promote healthy and sustainable aging.*

*You will reinforce your knowledge through TECH's innovative Relearning methodology, which will ensure an effective assimilation of the subject.*

# 02 Objectives

Through this university program, nurses will be highly specialized to optimize Public Health Surveillance through the implementation of effective systems and the use of advanced technologies. Likewise, these professionals will acquire skills for the collection, analysis and interpretation of epidemiological data. This will enable them to apply surveillance methods to monitor both communicable and non-communicable diseases. Nursing personnel will design health promotion and disease prevention programs. Therefore, they will contribute to promote healthy lifestyles in order to optimize the well-being of citizens.

“

*You will design the most advanced strategies to promote health among citizens and therefore prevent various diseases”*

## General Objectives

---

- ♦ Develop a broad and comprehensive conceptual framework of the situation, challenges and needs of Public Health in the 21st century
- ♦ Examine the international and global framework of Public Health policies
- ♦ Determine the key factors for a correct communication in health crisis: crisis communication and communication crisis
- ♦ Identify the theoretical and methodological framework for evaluation in Public Health
- ♦ Identify the steps to be followed for disease assessment using epidemiological data
- ♦ Compile the research methodology related to disease surveillance
- ♦ Identify the main risk and protective factors in communicable and non-communicable diseases
- ♦ Analyze the importance of quality assessment of intervention studies
- ♦ Develop the fundamentals of clinical epidemiology, measurement of frequency and distribution of diseases
- ♦ Critically evaluate the efficacy and effectiveness of clinical interventions, pharmacological treatments, surgical interventions and prevention strategies
- ♦ Fundamentals of the principles of the epidemiological method
- ♦ Fundamentals of the principles of health promotion, social determinants of health, health-related behavioral theories, and strategies to promote healthy lifestyles and environments
- ♦ Analyze the main health risks for different vulnerable groups
- ♦ Implement a holistic and integrative vision in the impact assessment of environmental risks on health protection

## Specific Objectives

---

### Module 1. Public Health Surveillance

- ◆ Determine the fundamental principles of health protection and prevention, including epidemiological surveillance, risk assessment, management, control and communication
- ◆ Examine self-monitoring and surveillance systems through hazard analysis and identification of critical control points
- ◆ Delve into the investigation systems and conduct a critical analysis of indicators, as well as records and evaluation systems
- ◆ Determine the requirements in primary prevention research for chronic diseases, as well as evaluate effective strategies
- ◆ Specify the terms needed to conduct research for improvement in the design, implementation, and evaluation of comprehensive health protection and prevention programs
- ◆ Analyze, in detail, the interpretation of epidemiological data related to environmental health, including surveillance of diseases and environmental risk factors
- ◆ Describe innovative monitoring and prevention systems in pharmacovigilance that allow for early detection of drug-related adverse events
- ◆ Describe international disease surveillance systems and cooperative systems among them

### Module 2. Epidemiology and Prevention of Communicable and Non-communicable Diseases

- ◆ Analyze the epidemiology and risk factors of Cancer, as well as its primary and secondary prevention
- ◆ Support the epidemiology of Cardiovascular Diseases and their risk
- ◆ Promote the detection of rare diseases and neonatal screening programs
- ◆ Evaluate healthy and active aging programs
- ◆ Identify the main communicable diseases
- ◆ Determine the usefulness of vaccines in the prevention of Immunopreventable Infectious Diseases

### Module 3. Clinical Epidemiology

- ◆ Develop the ability to identify and describe the main components of an intervention study, as well as to determine its different types
- ◆ Analyze the importance of quality assessment of intervention studies
- ◆ Compile examples of good- and poor-quality intervention studies
- ◆ Evaluate the methodology and design of pragmatic and explanatory clinical trials
- ◆ Analyze the different phases of the design of diagnostic test validity studies and the methodological quality and correctness of these studies
- ◆ Provide a basis for the quality and methodological correctness of prognostic factor studies
- ◆ Introduce patient safety as a key concept in quality healthcare
- ◆ Propose activities for the evaluation of Public Health plans, implementing strategies based on scientific evidence

03

# Course Management

In line with its priority to provide first-class university programs, TECH carries out a thorough process to select its faculty. As a result, this university diploma program has the participation of authentic references in the field of Public Health for Nursing. These professionals have worked in renowned entities, where they have contributed to optimize the quality of life of numerous patients. In this way, graduates will have access to an enriching academic experience that will significantly improve their professional practice.

“

*The faculty of this program has extensive research and professional experience in the field of Public Health Surveillance”*

## Management

### Dr. Camacho Parejo, Juan José

- General Director of Public Health at the Regional Ministry of Health of Castilla-La Mancha
- Director of the Center for Analysis, Documentation and Evaluation of Health Policies of SESCAM
- Director of Hospitals in the Health Care DG of SESCAM
- Medical Director at the Integrated Care Management of Talavera de la Reina
- Deputy Medical Director at Nuestra Señora del Prado Hospital (Talavera de la Reina)
- Urologist at the Río Hortega Hospital, Jove Hospital (Gijón) and Nuestra Señora del Prado Hospital (Talavera de la Reina)
- Specialist in Urology
- Senior Management Program in the Health Sector, Administration/Management of Health Services, San Telmo University Business School
- Degree in Medicine and Surgery from the Complutense University of Madrid

### **Ms. Ruiz Redondo, Julia María**

- ◆ Coordinator of the National Working Group on Public Health 2.0 in the SEMG
- ◆ Coordinator of the General Directorate of Public Health in the Ministry of Health of Castilla-La Mancha
- ◆ Coordinator of the Regional Advisory Group on Immunization at the Regional Ministry of Health of Castilla-La Mancha
- ◆ Nurse Inspector in the Management of Coordination and Inspection of Castilla-La Mancha in the SESCAM
- ◆ Nurse of Specialized Care in the Hospital Emergency Area at the General Hospital of Tomelloso
- ◆ Master's Degree in Medical Management and Clinical Management by the UNED, ISCIII, National School of Health
- ◆ Master's Degree in Vaccines from the Catholic University of San Antonio de Murcia
- ◆ Master's Degree in Specialized Emergency Nursing Care, Critical Patient Area and Post-Anesthesia Care by the University of Valencia
- ◆ Master's Degree in Nursing Services Management from the UNED
- ◆ Senior Healthcare Management Program from San Telmo Business School
- ◆ Graduate in Nursing from the Catholic University of Avila
- ◆ Diploma in Nursing from the University of Jaén

## Professors

### Dr. Losada Salamanca, Diana Carolina

- ♦ Palliative Medicine Physician, Palliative Care Unit at Hospital Virgen de la Luz
- ♦ Emergency Physician at the Hospital Virgen de la Luz.
- ♦ Master's Degree in Bioethics by the Catholic University of Valencia
- ♦ Master's Degree in Palliative Care for Medicine by the CEU Cardenal Herrera
- ♦ Expert in Individualized Palliative Care for Medicine
- ♦ Expert in Clinical Management of the Palliative Care Patient For Medicine
- ♦ Expert in Psychosocial Aspects in the Palliative Patient For Medicine
- ♦ Medical Specialist in Family and Community Medicine (2020)
- ♦ Degree in Medicine and Surgery from the Pontifical Javeriana University

### Dr. Jimeno Sanz, Isabel

- ♦ Director and Family Physician at the Isla de Oza Health Center
- ♦ Collaborator with different groups of the Consejería de Sanidad de Madrid
- ♦ Responsible for the SEMG Vaccine Group
- ♦ Specialist in the CAM Vaccine Advisory Committee and in the VHP Platform of Madrid
- ♦ Principal Investigator in Clinical Trials
- ♦ Master's Degree in Epidemiology and Public Health Autonomous University of Madrid
- ♦ Master's Degree in Dietetics and Nutrition by the University of Navarra.
- ♦ Degree in Medicine and Surgery from the Complutense University of Madrid
- ♦ Diploma in Leadership and Management of PC Teams, Autonomous University of Madrid
- ♦ Member of the Neumoexperto Group

### Dr. Rodríguez Ledo, María Pilar

- ♦ President of the Territorial Research Ethics Committee of Santiago-Lugo
- ♦ National Coordinator of the Research Methodology and Support Working Group of the Spanish Society of General and Family Physicians (SEMG)
- ♦ Deputy Medical Director of the Integrated Management Structure of Lugo, Cervo and Monforte
- ♦ Responsible for the Innovation Node in the Integrated Management Structure of Lugo, Cervo and Monforte
- ♦ Responsible for the Simulation Classroom at the Integrated Management Structure of Lugo, Cervo and Monforte
- ♦ Vice-secretary of the Official College of Physicians of Lugo
- ♦ Member of the National Commission of the Specialty of Family Medicine, as Advisor to the Ministry of Health, Social Services and Equality

### Dr. Sánchez Diz, Paula

- ♦ Technical Research Coordinator at the Spanish Society of General and Family Physicians (SEMG)
- ♦ Coordinator and Member of the Executive Committee of the Spanish Research Network on Persistent COVID (REICOP)
- ♦ Technical Auditor of UNE-EN ISO/IEC 17025 and UNE-EN ISO/IEC 17043 in Clinical Trial laboratories
- ♦ Specialist Molecular Biology Technician at Nasertic
- ♦ Teaching and Research Staff at the University of Santiago de Compostela
- ♦ Predoctoral Research Staff linked to research projects
- ♦ PhD in Biology from the University of Santiago de Compostela
- ♦ Degree in Biology from the University of Santiago de Compostela

**Dr. Mera Cordero, Francisco**

- ◆ Director of the Precision Medicine Unit of Long Covid and Post Viral Syndromes at Blue Healthcare
- ◆ Clinical Director and Collaborating Researcher of the study "ACE 2 in Post COVID Syndrome" of the Severo Ochoa Molecular Biology Center
- ◆ Emergency Physician in Assistència Sanitària
- ◆ Master's Degree in Diabetes and Nutrition by the Francisco de Vitoria University
- ◆ Degree in Medicine and General Surgery from the University of Zaragoza
- ◆ Presenter in the Health Dissemination Channel COVID Persistent in Medicina TV
- ◆ Presenter in Iberoamerican Channel @AIREyVIDA2021
- ◆ Member of the Board of the Spanish Network for Research in Persistent COVID
- ◆ Member of the CIBER POSTCOVID Group of the Carlos III Institute

**Dr. Silva Contreras, Javier**

- ◆ Head of the Preventive Medicine Service of the Virgen de la Luz Hospital
- ◆ Master's Degree in Public Health and Healthcare Management, University of Valencia
- ◆ Master's Degree in Infectious Diseases and Antimicrobial Treatment by the Cardenal Herrera University
- ◆ Specialist in Vaccines by the University of Santiago de Compostela
- ◆ Specialist in Nosocomial Infections by the EUROINNOVA Postgraduate Training Center
- ◆ Specialist Doctor in Preventive Medicine and Public Health
- ◆ Degree in Medicine and Surgery from the Pontifical Javeriana University

**Dr. Sanz Muñoz, Iván**

- ◆ Head of Scientific and Virological Surveillance at the National Influenza Center of Valladolid
- ◆ Director and Coordinator of the Influenza Update Conference at the National Influenza Center of Valladolid
- ◆ PhD in Health Sciences Research from the University of Valladolid
- ◆ Master's Degree in Vaccines from the Catholic University of San Antonio of Murcia
- ◆ Master's Degree in Genomics and Medical Genetics from the University of Granada
- ◆ Master's Degree in Health Sciences Research: Pharmacology, Neurobiology and Nutrition by the University of Valladolid
- ◆ Master's Degree in Anthropology and Forensic Genetics from the University of Granada
- ◆ Degree in Biology from the University of Salamanca
- ◆ Member of: WHO Global Influenza Surveillance Network (GISRS), Institute of Health Sciences of Castilla y León (ICSCYL) and Center for Biomedical Research in Infectious Diseases (CIBERINFEC)

*Take the opportunity to learn about the latest advances in this field in order to apply it to your daily practice"*

# 04

# Structure and Content

Through this university program, nurses will perform health surveillance activities and contribute to the improvement of community health.

The syllabus will analyze in detail the mechanisms for the design of health protection programs, as well as the interpretation of epidemiological data on chronic diseases. Likewise, the syllabus will delve into the risk factors of cancer, enabling graduates to detect risk factors and apply prevention strategies. The didactic contents will also provide the most innovative tools to evaluate the quality of intervention studies.

“

*A high level syllabus that covers  
the latest scientific postulates in  
Clinical Epidemiology”*

## Module 1. Public Health Surveillance

- 1.1. Protection, Prevention and Surveillance in Public Health: Classification, Evaluation, Management and Risk Control and Communication
  - 1.1.1. Health Protection and Prevention
  - 1.1.2. Health Surveillance and Risk Management
  - 1.1.3. Risk Communication Mechanisms and Limitations
- 1.2. Self-control and Surveillance Systems: Hazard Analysis and Critical Control Points
  - 1.2.1. Establishment of Preventive Protocols
  - 1.2.2. Identification and Risk Assessment
  - 1.2.3. Implementation and Follow-up Control Points
- 1.3. Research and Critical Analysis of Process and Outcome Indicators, Records, and Evaluation Systems Development and Innovation
  - 1.3.1. Research and Analysis of Indicators
  - 1.3.2. Recording and Evaluation for Efficient Data Management
  - 1.3.3. Innovation in Evaluation Systems
- 1.4. Research in the Design, Implementation, and Impact Evaluation of Health Protection and Prevention Programs
  - 1.4.1. Mechanisms for the Design of Health Protection and Prevention Programs
  - 1.4.2. Implementation of Health Protection and Prevention Programs
  - 1.4.3. Analysis of the Impact of Health Protection and Prevention Programs
- 1.5. Analysis and Interpretation of Epidemiological Data on Environmental Health: Surveillance, Estimation, Plans and Programs
  - 1.5.1. Importance of Environmental Health in Human Health.
  - 1.5.2. Exploration of Environmental Epidemiological Data
  - 1.5.3. Practical Application of Environmental Data Analysis
- 1.6. Interpretation of Epidemiological Data on Chronic Diseases and Planning: Surveillance, Estimation, Design of Plans, Programs, and Screening
  - 1.6.1. Epidemiological Analysis of Chronic Diseases Importance of Monitoring
  - 1.6.2. Design and Development of Interventions for Chronic Diseases
  - 1.6.3. Epidemiological Surveillance and Disease Burden Analysis
- 1.7. Research in Primary Prevention of Chronic Diseases: Health Protection
  - 1.7.1. Research in Primary Prevention of Chronic Diseases
  - 1.7.2. Applied Research in Health Prevention and Protection
  - 1.7.3. Impact Evaluation and Communication of Results

- 1.8. Innovation in Pharmacovigilance Monitoring and Prevention Systems: Alerts and Preventive Interventions
  - 1.8.1. Importance of Pharmacovigilance Safety in the Use of Drugs
  - 1.8.2. Advances in Pharmacovigilance Monitoring Systems.
  - 1.8.3. Risk Prevention Through Preventive Interventions
- 1.9. Models of Response to Alerts, Epidemic Outbreaks and Emergencies Development of Protocols and Procedures
  - 1.9.1. Response Strategies for Health Emergencies
  - 1.9.2. Development of Crisis Management Protocols
  - 1.9.3. Implementation and Evaluation of Emergency Response
- 1.10. International Health and Innovation in International Cooperation for Epidemiological Surveillance
  - 1.10.1. International Health Global Perspective on Epidemiological Surveillance
  - 1.10.2. Innovation in International Cooperation for Epidemiological Surveillance
  - 1.10.3. Challenges and Future of International Cooperation in Health

## Module 2. Epidemiology and Prevention of Communicable and Non-communicable Diseases

- 2.1. Epidemiology of Cancer: Risk Factors and Primary Prevention
  - 2.1.1. Descriptive Epidemiology: Incidence, Mortality and Data Sources
  - 2.1.2. Cancer Risk Factors: Environmental and Occupational
  - 2.1.3. Other Factors: Ultraviolet Light, Infections, Radiation
- 2.2. Risk Factors and Primary Prevention of Cancer: Lifestyle and Screening
  - 2.2.1. Primary Prevention Risk Factors and Prevention Strategies
  - 2.2.2. Legislative Measures
  - 2.2.3. Secondary Prevention
- 2.3. Biological Mechanisms of Cardiovascular Disease Estimation of Cardiovascular Risk and Population Prevention
  - 2.3.1. Ischemic Heart Disease and Stroke
  - 2.3.2. Epidemiological Indicators
  - 2.3.3. Classification of Cardiovascular Risk
  - 2.3.4. Prevention and Control of Cardiovascular Diseases
- 2.4. Detection of Rare Diseases and Neonatal Screening
  - 2.4.1. Rare Diseases
  - 2.4.2. Newborn Screening Programs
  - 2.4.3. Neonatal Screening for Congenital Metabolic and Endocrinologic Diseases
- 2.5. Comprehensive Approach to Chronic Disease Prevention for Healthy and Sustainable Aging
  - 2.5.1. Healthy Aging
  - 2.5.2. Active Aging
  - 2.5.3. Integrated Prevention
- 2.6. Epidemiology of Communicable Diseases: Epidemiologic Surveillance Systems and Notifiable Disease Systems
  - 2.6.1. Causative Agents
  - 2.6.2. Time Periods
  - 2.6.3. Transmission
  - 2.6.4. Host and Susceptible Population
  - 2.6.5. Epidemiological Surveillance Systems
- 2.7. Utility of Vaccines in the Prevention of Immunopreventable Infectious Diseases
  - 2.7.1. Analysis of the Importance of Vaccination in the Prevention of Infectious Diseases at the Individual and Community Levels
  - 2.7.2. Evolution of Vaccines: Types of Vaccines Currently Available
  - 2.7.3. Mechanisms of Action of Vaccines and Their Impact on the Immune System
  - 2.7.4. Efficacy and Safety of Vaccines in the Prevention of Infectious Diseases
  - 2.7.5. Importance of Vaccination in Risk Groups and in the Prevention of Epidemics
  - 2.7.6. Logistics and Vaccination Programs at the International Level
  - 2.7.7. Economic and Social Impact of Vaccination in the Prevention of Infectious Diseases
  - 2.7.8. Research and Analysis of Barriers and Challenges in the Implementation of Vaccination Programs
  - 2.7.9. Strategies and Measures to Promote Vaccination and to Raise Public Awareness of its Importance
  - 2.7.10. Evaluation and Critical Analysis of the Scientific Literature Related to Vaccines and their Usefulness in the Prevention of Infectious Diseases

- 2.8. Emerging Diseases Epidemic Outbreaks
    - 2.8.1. Factors Favoring Emerging Diseases
    - 2.8.2. New Agents and Diseases
    - 2.8.3. International Health Regulations (IHR)
    - 2.8.4. Epidemic Outbreaks. Study, Control and Measures: Chemoprophylaxis, Immunoglobulins and Vaccines
  - 2.9. Viral Hepatitis, HIV infection, AIDS, Sexually Transmitted Infections (STIs) and Tuberculosis
    - 2.9.1. Hepatitis A: Etiology, Epidemiology and Preventive Measures
    - 2.9.2. Hepatitis B: Etiology, Epidemiology and Preventive Measures
    - 2.9.3. Other Viral Hepatitis: Etiology, Epidemiology and Preventive Measures
    - 2.9.4. HIV: Etiology, Epidemiology and Preventive Measures
    - 2.9.5. Sexually Transmitted Infections (STIs): Etiology, Epidemiology, and Preventive Measures
    - 2.9.6. Tuberculosis: Etiology, Epidemiology and Preventive Measures
  - 2.10. Meningococcal Disease (MD) and Zoonosis: Epidemiology Prevention and Control
    - 2.10.1. Epidemiology of Meningococcal Disease
    - 2.10.2. Prevention and Control of Meningococcal Disease
    - 2.10.3. Epidemiology of Zoonoses
    - 2.10.4. Prevention and Control of Zoonoses
- Module 3. Clinical Epidemiology**
- 3.1. Design and Quality Assessment of Intervention Studies in Epidemiology
    - 3.1.1. Intervention Studies, Types and Key Design Elements
    - 3.1.2. Ethical Aspects of Intervention Research
    - 3.1.3. Design of Specific Intervention Studies
    - 3.1.4. Tools for Assessing the Quality of Intervention Studies
    - 3.1.5. Critical Appraisal of Intervention Studies
    - 3.1.6. Importance of Design and Quality Assessment
  - 3.2. Pragmatic vs. Explanatory Randomized Clinical Trials
    - 3.2.1. Differentiation Between Pragmatic and Explanatory Clinical Trials
    - 3.2.2. Ethical Implications of Each Approach
    - 3.2.3. Critical Evaluation of the Methodology and Design of Each Type of Trial
    - 3.2.4. Application of Knowledge to Clinical Practice and Research
    - 3.2.5. Promotion of Critical Thinking and Analytical Skills
    - 3.2.6. Design and Conduct of Clinical Studies
  - 3.3. Design of Diagnostic Test Studies
    - 3.3.1. Selection of the Study Population and Definition of Inclusion and Exclusion Criteria
    - 3.3.2. Determination of the Study Design and Selection of the Reference Methodology
    - 3.3.3. Calculation of Diagnostic Accuracy and Analysis of Results
  - 3.4. Evaluation of the Quality of a Diagnostic Test Study
    - 3.4.1. Study Validity Analysis
    - 3.4.2. Evaluation of the Accuracy of the Diagnostic Test
    - 3.4.3. Analysis of the Clinical Utility of the Diagnostic Test
  - 3.5. Design and Quality Assessment of Prognostic Factor Studies
    - 3.5.1. Selection and Definition of Prognostic Factors
    - 3.5.2. Study Design and Selection of the Study Population
    - 3.5.3. Evaluation of the Quality of the Study and the Prognostic Model
  - 3.6. Evidence-based Clinical Recommendations: *GRADE 1*
    - 3.6.1. Systematic Review of the Scientific Literature Identification of Clinical Recommendations
    - 3.6.2. Quality of Evidence and Strength of Recommendations
    - 3.6.3. Clinical Recommendations Applicable to Clinical Practice
    - 3.6.4. Development of Clinical Protocol or Clinical Guideline Based on the Identified Recommendations
    - 3.6.5. Implementation and Follow-up of the Clinical Protocol or Guideline in Patient Care Evidence and Focus on Improving Clinical Outcomes
    - 3.6.6. Periodic Evaluation, through Monitoring of Clinical Outcome Indicators and Feedback from the Health Professionals Involved

- 3.7. Evidence-based Clinical Recommendations: GRADE 2
  - 3.7.1. Analysis and Synthesis of the Available Evidence in the Scientific Literature for the Development of Recommendations
  - 3.7.2. Identification and Evaluation of the Quality of the Relevant Studies that Support the Clinical Recommendations
  - 3.7.3. Application of the Principles of the GRADE Methodology to Establish the Strength and Certainty of Clinical Recommendations
  - 3.7.4. Developing Clinical practice Guidelines that Incorporate Evidence-based Recommendations and that are Useful for Clinical Decision Making
  - 3.7.5. Periodic Updating and Revision of Clinical Recommendations Based on the Available Scientific Evidence
- 3.8. Evaluation of the Quality of Care
  - 3.8.1. Quality Criteria and Standards from the Point of View of Safety
  - 3.8.2. Evaluation of the Effectiveness of the Results obtained through the Actions Evaluated of the Actions Evaluated and their Components
  - 3.8.3. Measurement of Patient Outcomes and Experiences, Patient-Reported Outcome Measures (PROM) and Patient-Reported Experience Measures (PREM)
  - 3.8.4. Indicators for Assessing the Degree of Involvement, Participation and Satisfaction of Healthcare Professionals
- 3.9. Incorporation of Patients' Values and Preferences: Shared Decisions
  - 3.9.1. Effective Communication and Understanding of Values and Preferences
  - 3.9.2. Education and Counseling on Treatment Options
  - 3.9.3. Facilitation of Shared Decision Making
- 3.10. Patient Safety
  - 3.10.1. Identification and Recording of Adverse Events
  - 3.10.2. Analysis of Errors and Underlying Causes
  - 3.10.3. Implementation of Corrective Actions and Prevention Measures

# 05

# Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning.**

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

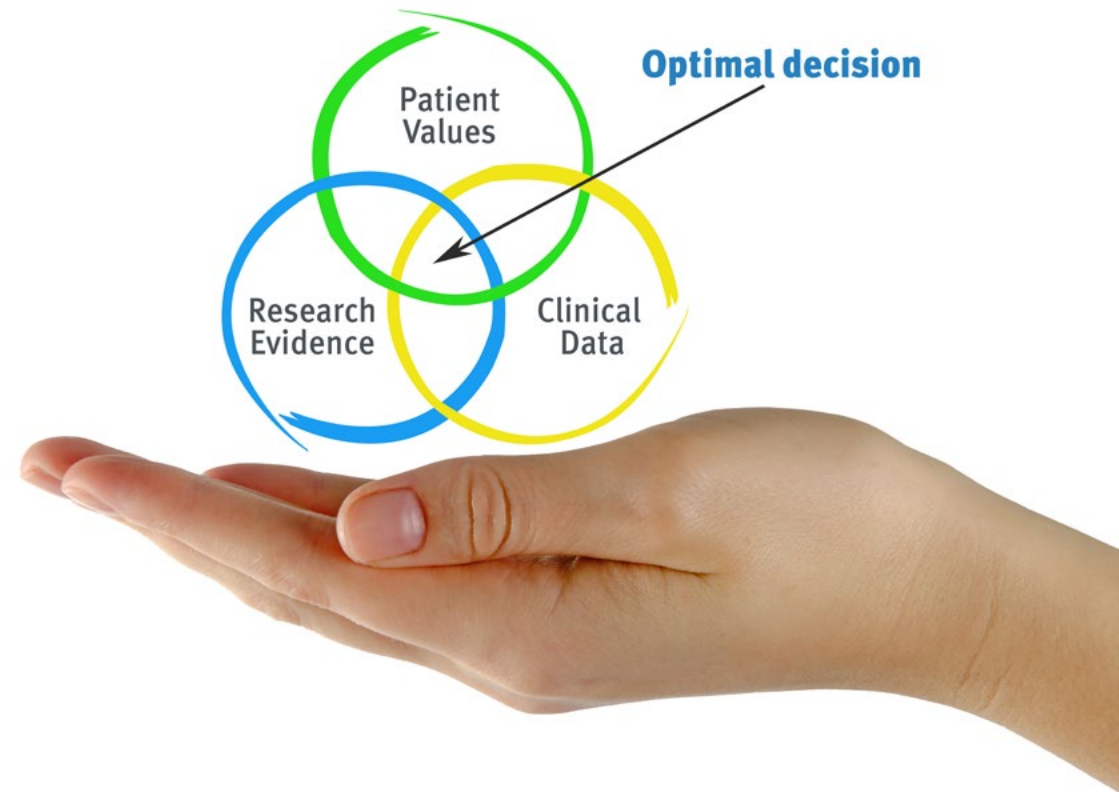

“

*Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"*

## At TECH Nursing School we use the Case Method

In a given situation, what should a professional do? Throughout the program, students will face multiple simulated clinical cases, based on real patients, in which they will have to do research, establish hypotheses, and ultimately resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method. Nurses learn better, faster, and more sustainably over time.

*With TECH, nurses can experience a learning methodology that is shaking the foundations of traditional universities around the world.*

According to Dr. Gérvas, the clinical case is the annotated presentation of a patient, or group of patients, which becomes a "case", an example or model that illustrates some peculiar clinical component, either because of its teaching power or because of its uniqueness or rarity. It is essential that the case is based on current professional life, in an attempt to recreate the real conditions in professional nursing practice.

“

*Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method”*

The effectiveness of the method is justified by four fundamental achievements:

1. Nurses who follow this method not only grasp concepts, but also develop their mental capacity, by evaluating real situations and applying their knowledge.
2. The learning process has a clear focus on practical skills that allow the nursing professional to better integrate knowledge acquisition into the hospital setting or primary care.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

## Relearning Methodology

At TECH we enhance the case method with the best 100% online teaching methodology available: Relearning.

This university is the first in the world to combine case studies with a 100% online learning system based on repetition combining a minimum of 8 different elements in each lesson, which is a real revolution compared to the simple study and analysis of cases.

*The nurse will learn through real cases and by solving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.*

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

With this methodology we have trained more than 175,000 nurses with unprecedented success in all specialities regardless of practical workload. Our pedagogical methodology is developed in a highly competitive environment, with a university student body with a strong socioeconomic profile and an average age of 43.5 years old.

*Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.*

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by TECH's learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

### Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is really specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

### Nursing Techniques and Procedures on Video

We introduce you to the latest techniques, to the latest educational advances, to the forefront of current medical techniques. All of this in direct contact with students and explained in detail so as to aid their assimilation and understanding. And best of all, you can watch them as many times as you want.

### Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

### Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

#### Expert-Led Case Studies and Case Analysis

Effective learning ought to be contextual. Therefore, TECH presents real cases in which the expert will guide students, focusing on and solving the different situations: a clear and direct way to achieve the highest degree of understanding.

#### Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

#### Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

#### Quick Action Guides

TECH offers the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical, and effective way to help students progress in their learning.
