Introduction

Protecting the environment must be everyone's objective, at global level, regardless of the region. When working to promote the development of the most disadvantaged regions, it is necessary to keep this premise in mind, to fight for growth that does not jeopardize environmental protection. To specialize in this field, TECH has designed this completely new program that will enable students to work with all the guarantees of success in this field.

“

Knowing the main tools of environmental law will allow us to fight for the benefit of sustainability. Don't think twice and give your profession a boost"

Environmental law and the commitment to sustainability must be present in any type of actions carried out at local, national and international level, regardless of the sector in which they are developed. For this reason, Cooperation and Environmental Law cannot be left out of this common objective of all societies. To prepare psychologists in this field, TECH has a brand-new Postgraduate Certificate, developed by a team of experts in the field who have come together to bring all their work experience in societies which are most in need.

In this program, the psychology professional will learn about the organizations dedicated to work in Environmental Cooperation and Law: their history, their evolution, the main characteristics of this type of organizations, etc. In this way, the management mode of these organizations, their working methods, legislation, and commitments to the most important areas of work, such as sustainable development.

This specialization combines basic knowledge in Cooperation and Environmental Law applied to the field of psychology, tools that allow the development worker to seek to improve the performance of their functions in those areas that people and peoples demand, orient them to change and focus them on the present situation through the tools and resources of Cooperation and Environmental Law.

In addition, as it is a 100% online specialization, the Psychologists will be able to combine the study of this comprehensive program with the rest of their daily obligations, choosing at all times where and when to study. A high-level program that will take these professionals to the top level in their field.

This **Postgraduate Certificate in Cooperation and Environmental Law** contains the most complete and up-to-date scientific program on the market. Its most outstanding features are:

- ♦ The development of case studies presented by experts of Cooperation and Environmental Law
- ♦ The graphic, schematic, and practical contents which provide scientific and practical information on the disciplines that are essential for professional practice
- ♦ Latest developments in Cooperation and Environmental Law
- ♦ Practical exercises where self-assessment can be used to improve learning
- ♦ Emphasis on innovative methodologies in Cooperation and Environmental Law
- ♦ Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ♦ Content that is accessible from any fixed or portable electronic device with an Internet connection

A high-level educational program created by the best experts in the field, which will allow you to achieve professional success"

“

This Postgraduate Certificate is the best investment you can make when selecting a refresher program, for two reasons: in addition to updating your knowledge in Cooperation and Environmental Law you will obtain a Postgraduate Certificate from TECH Technological University”

Its teaching staff includes professionals belonging to the field of and Environmental Law, you Cooperation, who pour into this program the experience of their work, in addition to recognized specialists from reference societies and prestigious universities.

The multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide an immersive learning experience designed to prepare for real-life situations.

The design of this program focuses on Problem-Based Learning, through which Psychologists must try to solve the different professional practice situations that arise. For this purpose, the specialists will be assisted by an innovative interactive video system developed by renowned and experienced experts in Cooperation and Environmental Law.

Increase your decision-making confidence by updating your knowledge through this Postgraduate Certificate.

We offer you the most complete program with the best teaching methodology.

02

Objectives

The main objective of the program is the development of theoretical and practical learning, so that the Psychologists can master Cooperation and Environmental Law, a practical and rigorous shape.

“

This Postgraduate Certificate will allow you to update your knowledge in Cooperation and Environmental Law with the use of the latest educational technology, to contribute with quality and confidence to decision-making”

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

At TECH we use the Case Method

What should a professional do in a given situation? Throughout the program, students will face multiple simulated clinical cases, based on real patients, in which they will have to do research, establish hypotheses, and ultimately resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method. Specialists learn better, faster, and more sustainably over time.

With TECH the psychologist experiences a way of learning that is shaking the foundations of traditional universities around the world.

According to Dr. Gérvas, the clinical case is the annotated presentation of a patient, or group of patients, which becomes a "case", an example or model that illustrates some peculiar clinical component, either because of its teaching power or because of its uniqueness or rarity. It is essential that the case is based on current professional life, trying to recreate the real conditions in the psychologist's professional practice.

“

Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method”

The effectiveness of the method is justified by four fundamental achievements:

1. Psychologists who follow this method not only master the assimilation of concepts, but also develop their mental capacity by means of exercises to evaluate real situations and apply their knowledge.
2. Learning is solidly translated into practical skills that allow the psychologist to better integrate knowledge into clinical practice.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

Relearning Methodology

At TECH we enhance the case method with the best 100% online teaching methodology available: Relearning.

Our university is the first in the world to combine the study of clinical cases with a 100% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, which is a real revolution compared to the simple study and analysis of cases.

The psychologist will learn through real cases and by solving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

This methodology has trained more than 150,000 psychologists with unprecedented success in all clinical specialties. Our pedagogical methodology is developed in a highly competitive environment, with a university student body with a strong socioeconomic profile and an average age of 43.5 years old.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by our learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Latest Techniques and Procedures on Video

TECH introduces students to the latest techniques, to the latest educational advances, to the forefront of current psychology. All of this in direct contact with students and explained in detail so as to aid their assimilation and understanding. And best of all, you can watch the videos as many times as you like.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Expert-Led Case Studies and Case Analysis

Effective learning ought to be contextual. Therefore, TECH presents real cases in which the expert will guide students, focusing on and solving the different situations: a clear and direct way to achieve the highest degree of understanding.

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.
Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Quick Action Guides

TECH offers the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical, and effective way to help students progress in their learning.
