Introduction

In order to carry out successful International Cooperation projects, it is essential to carry out management work that allows us to know the situation of the place where we are going to act, to follow up on these programs and to carry out a subsequent evaluation. With this program, TECH wants to provide the professionals with all the keys to be able to participate in the design of such projects, providing all their value as a Psychologist.

The coordination of International Cooperation projects is a complex task that requires highly trained professionals. Don't think twice and improve your professional skills with this specialized certificate for Psychologists"

Organizations working in the field of International Cooperation must have a broad knowledge of the region in which they are going to operate, as well as its needs, available resources and regulations. An overview of the place will allow them to work effectively, saving time and resources. For this reason, development workers need to carry out exhaustive analyses both in the phase prior to the design of intervention projects, as well as in the subsequent phases, since the evaluation of the work carried out will be what will make it possible to distinguish whether a project is successful or not, and even whether it can be reused in another region with similar needs.

In order to increase the specialization of psychologists who wish to work in this field, TECH has designed this comprehensive Postgraduate Certificate, which has a high academic level syllabus and up to date with the main developments in the field. For this, TECH has a specialized teaching team, which has also reflected the experience of their work in different areas of intervention.

This program combines basic knowledge in international cooperation and development applied to the field of psychology, tools that allow the development worker to seek to improve the performance of their functions in those fields that people and communities demand, orienting them to change and focusing them on the present situation through the tools and resources of cooperation.

In addition, as it is a 100% online program, the Psychologists will be able to combine the study of this comprehensive course with the rest of their daily obligations, choosing at all times where and when to study. A high-level program that will take these professionals to the highest level in their field.

This **Postgraduate Certificate in Design, Monitoring and Assessment of International Development Cooperation Projects** contains the most complete and up-to-date program on the market. The most important features include:

- ♦ The development of case studies presented by experts in international cooperation of peoples
- ♦ The graphic, schematic, and practical contents with which they are created, provide scientific and practical information on the disciplines that are essential for professional practice
- ♦ Latest developments in Design, Monitoring and Assessment of International Development Cooperation Projects
- ♦ Practical exercises where the self-assessment process can be carried out to improve learning
- ♦ Emphasis on innovative methodologies in International Development Cooperation
- ♦ Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ♦ Content that is accessible from any fixed or portable device with an Internet connection

A high-level educational program created by the best experts in the field, which will allow you to achieve professional success"

“*This program is the best investment you can make when selecting a refresher program, for two reasons: in addition to updating your knowledge in International Development Cooperation, you will obtain a Postgraduate Certificate from TECH Technological University”*

It includes in its teaching staff, professionals belonging to the field of international cooperation, who bring to this program the experience of their work, in addition to recognized specialists from prestigious reference societies and universities.

The multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide an immersive learning experience designed to prepare for real-life situations.

The design of this program focuses on Problem-Based Learning, through which Psychologists must try to solve the different professional practice situations that arise. For this purpose, the specialist will be assisted by an innovative interactive video system developed by renowned and experienced experts in Design, Monitoring and Assessment of International Development Cooperation Projects.

Increase your decision-making confidence by updating your knowledge through this Postgraduate Certificate.

We offer you the most complete Postgraduate Certificate with the best teaching methodology.

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

At TECH we use the Case Method

What should a professional do in a given situation? Throughout the program, students will face multiple simulated clinical cases, based on real patients, in which they will have to do research, establish hypotheses, and ultimately resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method. Specialists learn better, faster, and more sustainably over time.

With TECH the psychologist experiences a way of learning that is shaking the foundations of traditional universities around the world.

According to Dr. Gervas, the clinical case is the annotated presentation of a patient, or group of patients, which becomes a "case", an example or model that illustrates some peculiar clinical component, either because of its teaching power or because of its uniqueness or rarity. It is essential that the case is based on current professional life, trying to recreate the real conditions in the psychologist's professional practice.

“

Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method”

The effectiveness of the method is justified by four fundamental achievements:

1. Psychologists who follow this method not only master the assimilation of concepts, but also develop their mental capacity by means of exercises to evaluate real situations and apply their knowledge.
2. Learning is solidly translated into practical skills that allow the psychologist to better integrate knowledge into clinical practice.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

Relearning Methodology

At TECH we enhance the case method with the best 100% online teaching methodology available: Relearning.

Our university is the first in the world to combine the study of clinical cases with a 100% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, which is a real revolution compared to the simple study and analysis of cases.

The psychologist will learn through real cases and by solving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

This methodology has trained more than 150,000 psychologists with unprecedented success in all clinical specialties. Our pedagogical methodology is developed in a highly competitive environment, with a university student body with a strong socioeconomic profile and an average age of 43.5 years old.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by our learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Latest Techniques and Procedures on Video

TECH introduces students to the latest techniques, to the latest educational advances, to the forefront of current psychology. All of this in direct contact with students and explained in detail so as to aid their assimilation and understanding. And best of all, you can watch the videos as many times as you like.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Expert-Led Case Studies and Case Analysis

Effective learning ought to be contextual. Therefore, TECH presents real cases in which the expert will guide students, focusing on and solving the different situations: a clear and direct way to achieve the highest degree of understanding.

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Quick Action Guides

TECH offers the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical, and effective way to help students progress in their learning.
