Introduction

Neuropsychology has become one of the professional specialties with the most notable upturn at the present time. Both in educational, professional and social fields, the approaches of this science have become essential. These developments are supported by constant advances and progress that rely mainly on research. In this program we provide you with the specific and essential knowledge in this field: a step that will enable you to carry out a complete and effective Research in Educational Neuropsychology.

“

The deep knowledge of Research in Educational Neuropsychology and its multiple implications, in a complete Professional Master's Degree created to propel you to another professional level"

The work in neuropsychology is complex. It covers a broad spectrum of intervention that requires the professional to have very specific training in the various branches of brain development. This discipline, deeply linked to neurology and the physiological study of the brain, is affected by the changes that the evolution of knowledge in this scientific branch achieves. For professionals, this means an intense challenge of continuous updating that allows them to be at the forefront in terms of approach, intervention and monitoring of the cases that may arise in their practice.

Throughout this program, the student will go through all the current approaches in the field of neuropsychological research, from the basic starting points to the application of conclusions and the materialization of novel interventions.

With a fundamentally practical approach, this Professional Master's Degree will allow students to develop their own project during the specialization, becoming not only a moment of study, but also a time for acquiring experience.

A high level step that will become a process of improvement, not only on a professional level, but also on a personal level.

This challenge is one of TECH's social commitments: to help prepare highly qualified professionals and develop their personal, social and labor competencies during the course.

This challenge is one of TECH's social commitments: to help prepare highly qualified professionals and develop their personal, social and labor competencies during the course. TECH works to maintain motivation and to create a passion for learning. It also encourages thinking and the development of critical thinking.

The **Professional Master's Degree in Research in Educational Neuropsychology** contains the most complete and up-to-date educational program on the market.

The most important features include:

- ♦ The latest technology in online teaching software
- ♦ A highly visual teaching system, supported by graphic and schematic contents that are easy to assimilate and understand
- ♦ Practical cases presented by practising experts
- ♦ State-of-the-art interactive video systems
- ♦ Teaching supported by telepractice
- ♦ Continuous updating and recycling systems
- ♦ Autonomous learning: full compatibility with other occupations
- ♦ Practical exercises for self evaluation and learning verification
- ♦ Support groups and educational synergies: questions to the expert, debate and knowledge forums
- ♦ Communication with the teacher and individual reflection work
- ♦ Content that is accessible from any fixed or portable device with an Internet connection
- ♦ Complementary documentation banks permanently available, even after the course

A program created for professionals who aspire to excellence and that will allow them to acquire new skills and strategies in a smooth and effective way”

“ *A deep and complete immersion in the strategies and approaches of the Neuropsychology of Education*”

Our teaching staff is made up of working professionals. That way, TECH ensures to offer the updating objective it intends to provide. A multidisciplinary team of doctors trained and experienced in different environments, who will develop the theoretical knowledge in an efficient way, but, above all, will put at the service of the course the practical knowledge derived from their own experience: one of the differential qualities of this Professional Master's Degree.

This mastery of the subject is complemented by the effectiveness of the methodology used in the design of this Professional Master's Degree. Developed by a multidisciplinary team of e-learning experts, it integrates the latest advances in educational technology. In this way, the students will be able to study with a set of comfortable and versatile multimedia tools that will give them the operability they need in their training.

The design of this program is based on Problem-Based Learning: an approach that conceives learning as a highly practical process. To achieve this remotely we will use telepractice: with the help of an innovative interactive video system and Learning from an Expert, the students will be able to acquire the knowledge as if they were facing the scenario they are learning at that moment. A concept that will make it possible to integrate and fix learning in a more realistic and permanent way.

The sensory systems of the human being studied from the neuropsychologist's point of view, with the goal for intervention and improvement.

The processes and developments of a complete Neuropsychology of Education Research in an intensive and effective education program.

02

Objectives

The objective is to create highly qualified professionals for work experience. An objective that is complemented, moreover, in a global manner with the promotion of human development that lays the foundations for a better society. This objective materializes by helping professionals reach a much higher level of expertise and control. A goal that in just a few months the student will be able to achieve, with a course of high intensity and precision.

“

If your goal is to improve in your profession, to acquire a qualification that will enable you to compete among the best, look no further: welcome to TECH"

General Objectives

- ♦ Qualify professionals for the practice of Neuropsychology of Education in the development of children and young people
- ♦ Learn how to carry out specific programs to improve school performance
- ♦ Access to the forms and processes of Research in Educational Neuropsychology in the school environment
- ♦ Increase the capacity for work and autonomous resolution of learning processes
- ♦ Study the attention to diversity from the neuropsychological approach
- ♦ Learn about the different ways to implement enrichment systems for learning methodologies in the classroom, especially aimed at diverse students
- ♦ Analyze and integrate the knowledge necessary to foster students' school and social development

Take the opportunity and take the step to catch up on the latest developments in Neuropsychology of Education Research

Specific Objectives

Module 1. Basis of Neurosciences

- ♦ Study the anatomy of the brain and its relationship to learning
- ♦ Learn the brain basis of motor development
- ♦ Explore the quality of brain plasticity
- ♦ Analyze the various agents affecting child, adolescent and adult brain development

Module 2. Neuroeducation

- ♦ Reflect on the meaning of neuroeducation
- ♦ Study the peculiarities and fundamental characteristics of the different areas of the brain associated with emotions and learning
- ♦ Learn the different forms and techniques of intervention in education

Module 3. Memory Processes, Skills and TIC

- ♦ Explore and gain in depth knowledge of the characteristics and functioning of memory processes, in relation to the global development of the person, in the specific field of learning

Module 4. Visual and Auditory Functionality for Reading, Language, Languages and Learning

- ♦ Learn about the characteristics and development of the organs of sight
- ♦ Learn about the risk factors
- ♦ Learn ways to detect, assess and intervene in the classroom with students with vision problems
- ♦ Acquire the ability to work for the improvement of visual perception
- ♦ Become familiar with vision and reading skill training programs

- ♦ Study the saccadic models
- ♦ Learn about the characteristics and development of the organs of the ear
- ♦ Learn ways to detect, evaluate and intervene in the classroom with students with hearing problems
- ♦ Acquire the ability to work for the improvement of hearing
- ♦ Learn the psychobiological aspects of hearing loss
- ♦ Develop the necessary skills to make curricular adaptations in this area
- ♦ Study all the implications of visual and auditory problems on literacy learning

Module 5. Motor Skills, Laterality and Writing

- ♦ Learn the knowledge related to the basic processes of the central nervous system
- ♦ Know the particularities of motor and somatosensory development
- ♦ Distinguish and identify all those difficulties at the motor level that can influence academic performance
- ♦ Know the programs of stimulation and improvement of motor difficulties
- ♦ Learn how to prevent the development of difficulties in the educational environment

Module 6. Neurolinguistic Processes, Difficulties and Intervention Programs

- ♦ Develop the neurobiological aspects involved in language development
- ♦ Study the neuropsychological bases of language and the possibilities of language work and development
- ♦ Analyze the processes of language comprehension, sounds and reading comprehension
- ♦ Analyze language and literacy disorders
- ♦ Learn how to assess, diagnose and intervene in language difficulties

Module 7. Multiple Intelligences, Creativity, Talent and High Abilities

- ♦ Learn all aspects related to the theory of multiple intelligences and their assessment
- ♦ Learn the neuropsychological basis of creativity and its development in the educational context
- ♦ Know the possibilities of working in the area of high abilities

Module 8. Dyslexia, Dyscalculia and Hyperactivity

- ♦ Incorporate the necessary knowledge to detect and intervene in the classroom in cases of dyscalculia, dyslexia and TDH
- ♦ Understand the incidence of comorbidity in this context
- ♦ Learn about the possibilities of neurotechnology applied to dyslexia, ADHD and dyscalculia

Module 9. Research Methodology I

- ♦ Learn research methodology and its different approaches
- ♦ Develop a complete research method, from the choice of the topic, to the proposal and production
- ♦ Learn how to conduct quantitative research and analysis of results
- ♦ Learn descriptive statistics
- ♦ Learn how to develop a hypothesis test and interpret it
- ♦ Study the use of correlational and group comparison statistics and be able to use them in research

Module 10. Research Methodology II

- ♦ Learn descriptive statistics
- ♦ Learn how to develop a hypothesis test and interpret it
- ♦ Study the use of correlational and group comparison statistics and be able to use them in research

03 Skills

Once all the contents have been studied and the objectives of the program in Research Educational Neuropsychology have been achieved, the professional will have superior competence and performance in this area. A comprehensive approach in a high level program that makes the difference.

“

Achieving excellence in any profession requires effort and perseverance. But, above all, the support of professionals, who will give you the boost you need, with the necessary means and assistance. Just what TECH puts at your service"

General Skills

- ♦ Employ Neuropsychology in the educational environment
- ♦ Conduct programs to improve school performance
- ♦ Apply the research methods of Neuropsychology of Education
- ♦ Construct new ways of attending to diversity in the classroom

“

Our objective is very simple: to offer you quality education, with the best teaching system available today, so that you can achieve excellence in your profession"

Specific Skills

- ♦ Recognize the anatomy of the brain and its relationship with the development of different learning processes from the motor, sensory, emotional, etc. point of view
- ♦ Use the knowledge of Neuropsychology in the development of diverse intervention programs in all areas of school development
- ♦ Put into practice the different forms of intervention in the educational area based on the data extracted from the analysis of brain functionality, in the field of emotions and learning
- ♦ Be able to work on enhancing memory development
- ♦ Have tools to work with altered memory states
- ♦ Perform effective assessment, diagnosis and intervention of language difficulties
- ♦ Identify motor difficulties in students that affect their performance
- ♦ Apply new strategies in cases of high abilities
- ♦ Be able to program taking into account multiple intelligences and the impulse of talent and creativity
- ♦ Develop efficient intervention programs for students with dyscalculia, dyslexia and hyperactivity
- ♦ Devise, develop and analyze comprehensive research in the field of Neuropsychology

04

Course Management

Within the concept of total quality of the program, TECH is proud to offer you a teaching staff of the highest level, chosen for their proven experience in the educational field. Professionals from different areas and fields of expertise that make up a complete, multidisciplinary team. A unique opportunity to learn from the best.

“

Our professors will put their experience and teaching skills at your disposal to offer you a stimulating and creative specialization process”

International Guest Director

Dr. Michael Thomas is a leading figure in the field of **Cognitive Neuroscience** internationally. As such, with a focus on **cognitive variability** and **language development**, he has made key contributions to understanding how individual differences in **brain development** affect **learning** and **cognition** from infancy to adulthood.

Likewise, his commitment to interdisciplinary research has led him to direct the **Centre for Educational Neuroscience**, at University College London, where he has promoted the exchange between **Neuroscience** and **Education**, seeking to improve **educational practices** through a deeper understanding of the **brain mechanisms of learning**. In addition, through his **Developmental Neurocognition laboratory** at the **Birkbeck Centre for Brain and Cognitive Development**, which he founded, he has led innovative projects integrating **behavioral**, **neuroimaging**, **computational** and **genetic methods**.

Notably, one of the most important milestones in his career has been the co-recipient of the **Queen's Anniversary Prize for Higher Education** for his pioneering work in **Child Neuropsychology**. He has also co-edited the book "**Educational Neuroscience: Development throughout life**", which explores how advances in Neuroscience can influence the design of **educational policies**. In this sense, the text addresses crucial issues such as **individual differences** in the classroom, **cognitive enhancement** and the translation of scientific research into **pedagogical strategies**, providing **evidence-based solutions** to improve educational outcomes across the lifespan.

Dr. Michael Thomas has also been a member of several scientific societies and academic committees, such as the **British Psychological Society** and the **Association for Psychological Science**, reflecting his influence on the evolution of **Educational Neuroscience**.

Dr. Thomas, Michael

- ♦ Director of the Centre for Educational Neuroscience at University College London, United Kingdom
- ♦ Founder of the Developmental Neurocognition Laboratory at the Birkbeck Centre for Brain and Cognitive Development
- ♦ Co-author of the book “Educational Neuroscience: Development Across the Lifespan”
- ♦ Ph.D. in Experimental Psychology from Oxford University
- ♦ M.Sc. in Cognitive Science from the University of Birmingham
- ♦ B.A. in Psychology from the University of Exeter
- ♦ Queen’s Anniversary Prize for Higher Education
- ♦ Member of:
 - ♦ British Psychological Society
 - ♦ Association for Psychological Science
 - ♦ International Mind, Brain and Education Society

“

Thanks to TECH, you will be able to learn with the best professionals in the world”

Structure and Content

The contents of this specialization have been developed by the different teachers on this program with a clear purpose: to ensure that our students acquire each and every one of the necessary skills to become true experts in this field.

The content of this program will allow you to learn all aspects of the different disciplines involved in this area: a very complete and well structured program that will lead you to the highest standards of quality and success.

“

Through a complete and very well compartmentalized development, you will be able to access to the most advanced knowledge in Research in Educational Neuropsychology”

Module 1. Principles of Neurosciences

- 1.1. The Nervous System and Neurons
 - 1.1.1. Introduction
 - 1.1.2. Developments and Latest Approaches
- 1.2. Basic Anatomy of Learning-Related Structures
 - 1.2.1. Description
 - 1.2.2. Physiology of Learning
- 1.3. Psychological Processes Related to Learning
 - 1.3.1. Emotions and Learning
 - 1.3.2. Emotional Approaches
- 1.4. The Main Brain Structures Related to Motor Skills
 - 1.4.1. Brain and Motor Development
 - 1.4.2. Laterality and Development
- 1.5. Plastic Brain and Neuroplasticity
 - 1.5.1. Definition of Plasticity
 - 1.5.2. Neuroplasticity and Education
- 1.6. Epigenetics
 - 1.6.1. Definition and Origins
- 1.7. Effects of the Environment on Brain Development
 - 1.7.1. Current Theories
 - 1.7.2. The Influence of the Environment on Child Development
- 1.8. Changes in the Infant's Brain
 - 1.8.1. Brain Development in Infancy
 - 1.8.2. Features
- 1.9. Evolution of the Adolescent Brain
 - 1.9.1. Brain Development in Adolescence
 - 1.9.2. Features
- 1.10. The Adult Brain
 - 1.10.1. Characteristics of the Adult Brain
 - 1.10.2. The Adult Brain and Learning

Module 2. Neuroeducation

- 2.1. Introduction to Neuroeducation
- 2.2. Main Neuromyths
- 2.3. Attention
- 2.4. Emotion
- 2.5. Motivation
- 2.6. The Learning Process
- 2.7. Memory
- 2.8. Stimulation and Early Interventions
- 2.9. Importance of Creativity in Neuroeducation
- 2.10. Methodologies that Allow the Transformation of Education into Neuroeducation

Module 3. Memory Processes, Skills and TICS

- 3.1. Conceptual Bases of Memory
 - 3.1.1. Introduction and Objectives
 - 3.1.2. Concept and Definition of Memory
 - 3.1.3. Basic Processes of Memory
 - 3.1.4. Initial Research on Memory
 - 3.1.5. Classification of Memory
 - 3.1.6. Memory During Development
 - 3.1.7. General Strategies to Stimulate Memory
 - 3.1.8. Bibliographical References
- 3.2. Sensory Memory
 - 3.2.1. Introduction and Objectives
 - 3.2.2. Concept and Definition
 - 3.2.3. Neurobiological Foundations of Sensory Memory
 - 3.2.4. Assessing Sensory Memory
 - 3.2.5. Intervention in Educational Contexts of Sensory Memory
 - 3.2.6. Family Activities for Students From Three to Five Years of Age
 - 3.2.7. Sensory Memory Intervention Case Study
 - 3.2.8. Bibliographical References
- 3.3. Short-Term Memory
 - 3.3.1. Introduction and Objectives
 - 3.3.2. Concept and Definition of Short-Term Memory and Working Memory
 - 3.3.3. Neurobiological Principles of Short-Term and Working Memory
 - 3.3.4. Assessment of Short-Term and Working Memory
 - 3.3.5. Intervention in Educational Contexts of Short-Term Memory
 - 3.3.6. Family Activities for Students From Six to Eleven Years of Age
 - 3.3.7. Working Memory Intervention Case Study
 - 3.3.8. Bibliographical References
- 3.4. Long-Term Memory
 - 3.4.1. Introduction and Objectives
 - 3.4.2. Concept and Definition
 - 3.4.3. Neurobiological Bases of Long-Term Memory
 - 3.4.4. Assessment of Long-Term Memory
 - 3.4.5. Intervention in Educational Contexts of Long-Term Memory
 - 3.4.6. Family Activities for Students From Twelve to Eighteen Years of Age
 - 3.4.7. Long-Term Memory Intervention Case Study
- 3.5. Memory Disorders
 - 3.5.1. Introduction and Objectives
 - 3.5.2. Memory and Emotion
 - 3.5.3. Forgetfulness Theories of Forgetfulness
 - 3.5.4. Memory Distortions
 - 3.5.5. Memory Alterations: Amnesias
 - 3.5.6. Childhood Amnesia
 - 3.5.7. Other Types of Memory Alteration
 - 3.5.8. Programs to Improve Memory
 - 3.5.9. Technological Programs to Improve Memory
 - 3.5.10. Bibliographical References

- 3.6. Thinking Skills
 - 3.6.1. Introduction and Objectives
 - 3.6.2. Developing Thinking from Childhood to the Adult Age
 - 3.6.3. Basic Thought Processes
 - 3.6.4. Thinking Skills
 - 3.6.5. Critical Thinking
 - 3.6.6. Characteristics of Digital Natives
 - 3.6.7. Bibliographical References
- 3.7. Neurobiology of Thinking
 - 3.7.1. Introduction and Objectives
 - 3.7.2. Neurobiological Foundations of Thinking
 - 3.7.3. Cognitive distortions
 - 3.7.4. Neuropsychological Assessment Instruments
 - 3.7.5. Bibliographical References
- 3.8. Cognitive Intervention
 - 3.8.1. Introduction and Objectives
 - 3.8.2. Learning Strategies
 - 3.8.3. Cognitive Stimulation Techniques in Educational Contexts
 - 3.8.4. Methods for Studying at Home
 - 3.8.5. Cognitive Stimulation Activities in the Family Environment
 - 3.8.6. Learning Strategy Intervention Case Study
 - 3.8.7. Bibliographical References
- 3.9. Cognitive Thought Theories
 - 3.9.1. Introduction and Objectives
 - 3.9.2. Significant Learning Theory
 - 3.9.3. Information Processing Theory
 - 3.9.4. Genetic Theory: Constructivism
 - 3.9.5. Sociocultural Theory: Socioconstructivism
 - 3.9.6. Theory of Connectivism

Module 4. Visual and Auditory Functionality for Reading, Language, Languages and Learning

- 4.1. Vision: Functioning and Neuropsychological Bases
 - 4.1.1. Introduction
 - 4.1.2. Development of the Visual System at Birth
 - 4.1.3. Risk Factors
 - 4.1.4. Development of Other Sensory Systems During Infancy
 - 4.1.5. Influence of Vision on the Visuomotor System and its Development
 - 4.1.6. Normal and Binocular Vision
 - 4.1.7. Anatomy of Human Eyes
 - 4.1.8. Eye Functions
 - 4.1.9. Other Functions
 - 4.1.10. Visual Pathways to the Cerebral Cortex
 - 4.1.11. Elements that Favor Visual Perception
 - 4.1.12. Vision Diseases and Alterations
 - 4.1.13. Most Common Eye Disorders or Diseases: Classroom Interventions
 - 4.1.14. Computer Vision Syndrome (CVS)
 - 4.1.15. Attitudinal Observation of the Student
 - 4.1.16. Summary
 - 4.1.17. Bibliographical References
- 4.2. Visual Perception, Assessment and Intervention Programs
 - 4.2.1. Introduction
 - 4.2.2. Human Development: Development of the Sensory Systems
 - 4.2.3. Sensory Perception
 - 4.2.4. Neurodevelopment
 - 4.2.5. Description of the Perceptual Process
 - 4.2.6. Color Perception
 - 4.2.7. Perception and Visual Skills
 - 4.2.8. Evaluation of Visual Perception
 - 4.2.9. Intervention for the Improvement of Visual Perception
 - 4.2.10. Summary
 - 4.2.11. Bibliographical References

- 4.3. Tracking Eye Movements
 - 4.3.1. Introduction
 - 4.3.2. Eye Movements
 - 4.3.3. Tracking Eye Movements
 - 4.3.4. Ocular Motility Recording and Assessment
 - 4.3.5. Ocular Motility-Related Disorders
 - 4.3.6. The Visual System and Reading

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

At TECH we use the Case Method

What should a professional do in a given situation? Throughout the program, students will face multiple simulated clinical cases, based on real patients, in which they will have to do research, establish hypotheses, and ultimately resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method. Specialists learn better, faster, and more sustainably over time.

With TECH the psychologist experiences a way of learning that is shaking the foundations of traditional universities around the world.

According to Dr. Gervas, the clinical case is the annotated presentation of a patient, or group of patients, which becomes a "case", an example or model that illustrates some peculiar clinical component, either because of its teaching power or because of its uniqueness or rarity. It is essential that the case is based on current professional life, trying to recreate the real conditions in the psychologist's professional practice.

“

Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method”

The effectiveness of the method is justified by four fundamental achievements:

1. Psychologists who follow this method not only master the assimilation of concepts, but also develop their mental capacity by means of exercises to evaluate real situations and apply their knowledge.
2. Learning is solidly translated into practical skills that allow the psychologist to better integrate knowledge into clinical practice.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

Relearning Methodology

At TECH we enhance the case method with the best 100% online teaching methodology available: Relearning.

Our university is the first in the world to combine the study of clinical cases with a 100% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, which is a real revolution compared to the simple study and analysis of cases.

The psychologist will learn through real cases and by solving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

This methodology has trained more than 150,000 psychologists with unprecedented success in all clinical specialties. Our pedagogical methodology is developed in a highly competitive environment, with a university student body with a strong socioeconomic profile and an average age of 43.5 years old.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by our learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Latest Techniques and Procedures on Video

TECH introduces students to the latest techniques, to the latest educational advances, to the forefront of current psychology. All of this in direct contact with students and explained in detail so as to aid their assimilation and understanding. And best of all, you can watch the videos as many times as you like.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Expert-Led Case Studies and Case Analysis

Effective learning ought to be contextual. Therefore, TECH presents real cases in which the expert will guide students, focusing on and solving the different situations: a clear and direct way to achieve the highest degree of understanding.

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Quick Action Guides

TECH offers the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical, and effective way to help students progress in their learning.

Certificate

The Professional Master's Degree in Research in Educational Neuropsychology guarantees students, in addition to the most rigorous and up to date education, access to a Professional Master's Degree issued by TECH Technological University.

“

Successfully complete this program and receive your university qualification without having to travel or fill out laborious paperwork”

This **Professional Master's Degree in Research in Educational Neuropsychology** contains the most complete and up to date program on the market.

After the student has passed the evaluations, they will receive their corresponding **Professional Master's Degree** issued by **TECH Technological University** via tracked delivery*.

The diploma issued by **TECH Technological University** will reflect the qualification obtained in the **Professional Master's Degree**, and meets the requirements commonly demanded by labor exchanges, competitive examinations, and professional career evaluation committees.

Title: **Professional Master's Degree in Research in Educational Neuropsychology**

Modality: **online**

Duration: **12 months**

*Apostille Convention. In the event that the student wishes to have their diploma issued with an apostille, TECH EDUCATION will make the necessary arrangements to obtain it, at an additional cost.
