# Introduction

Becoming an elite athlete implies being able to master elements beyond sports practice. One of them is undoubtedly wealth management, since at the end of their careers more and more professionals are facing serious financial losses due to various factors. Analyzing these causes and managing strategies to preserve what athletes have achieved with sacrifice is the purpose of this program. To this end, the legal and labor regime of high-level sports professionals and their tax framework will be studied in depth. All this in a practical online format where the student will be supervised by prestigious teachers.

“

*A qualification that is increasingly necessary for elite athletes to keep what they have achieved with sacrifice in their careers”*

There are several consulting firms that provide really worrying data on the mismanagement of wealth by top-level athletes. For example, it is estimated that, years after retirement, about 80% of American soccer players end up broke or in manifestly precarious economic situations. These are significant figures that reflect the danger of the elite athlete managing his fortune without seeking advice, or with inadequate advice.

For this reason, the aim of this Postgraduate Diploma is to offer the current and necessary knowledge of the most effective techniques for heritage preservation. With the specialization they will acquire, the Sports Science professional will be able to diligently manage their own assets or advise with guarantees to athletes on the corrections to be made to avoid economic fiasco.

Thus, these objectives will be achieved by developing an extensive tour of the legal and labor regime of athletes at different levels, delving into key aspects such as the determination of tax residence or the application of different tax rates. This will lay the groundwork for approaching wealth management through the design of contingency plans or through the evaluation of responsible investment options.

This comprehensive specialization will be a guarantee for the student, who will be able to study the program at their own pace and benefit from the educational innovations made available by TECH in the Virtual Campus.

This **Postgraduate Diploma in Advising Professional Athletes** contains the most complete and up-to-date scientific program on the market. The most important features include:

- ♦ The development of case studies presented by experts on the legal and labor regime of professional athletes
- ♦ The graphic, schematic and eminently practical contents of the book provide legal and practical information on those disciplines that are essential for professional practice
- ♦ Practical exercises where self-assessment can be used to improve learning
- ♦ Its special emphasis on innovative methodologies
- ♦ Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ♦ Content that is accessible from any fixed or portable device with an Internet connection

*You will determine the keys to proper asset management, establishing a contingency plan for unexpected situations"*

“

*Thanks to the advanced theoretical and practical training that TECH will provide you with, you will be able to handle all forms of contract termination, focusing on the most relevant ones"*

*An increasingly demanded specialization with which you will master the assumptions whereby the athlete can transfer his tax residence in a legal manner.*

*With the updated knowledge of this Postgraduate Diploma you will identify the best investment options without putting your assets at risk.*

The program's teaching staff includes professionals from the sector who contribute their work experience to this educational program, as well as renowned specialists from leading societies and prestigious universities.

Its multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide an immersive education programmed to learn in real situations.

The design of this program focuses on Problem-Based Learning, by means of which the professional must try to solve the different professional practice situations that are presented throughout the academic course. This will be done with the help of an innovative system of interactive videos made by renowned experts.

# 02 Objectives

Aware that the area covered by the degree is of increasing interest, TECH has established objectives that seek nothing more than to provide students with the necessary tools to master the legal and tax framework of the athlete. Based on the latest knowledge in this field, you will be able to meet the challenges of your business life and ensure proper tax compliance to avoid spiraling legal problems.

“

*It achieves the objectives of the program to address the peculiarities of the employment relationship of the athlete in terms of working time and salary”*

# 05 Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

*Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"*

### Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

“

*At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world"*

*You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.*

### A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

“*Our program prepares you to face new challenges in uncertain environments and achieve success in your career”*

The case method is the most widely used learning system in the best faculties in the world. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question we face in the case method, an action-oriented learning method. Throughout the program, the studies will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

*The student will learn to solve complex situations in real business environments through collaborative activities and real cases.*

## Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines 8 different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

*In 2019, we obtained the best learning results of all online universities in the world.*

At TECH, you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

With this methodology, we have trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, markets, and financial instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

*Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.*

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

#### Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

#### Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

#### Practising Skills and Abilities

They will carry out activities to develop specific competencies and skills in each thematic area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

#### Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

#### Case Studies

Students will complete a selection of the best case studies chosen specifically for this situation. Cases that are presented, analyzed, and supervised by the best specialists in the world.

#### Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

#### Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.
