Introduction

Audiovisual production is defined by many professionals as an art in which a product is created to be transmitted in different media. Getting started in this field requires specialized knowledge of television programming and genre formats, for example; the structure of the audiovisual system or developing the right technique to translate an idea into reality. Therefore, with this degree, students interested in the world of video games will be able to broaden their professional horizons, being able to take their knowledge to the management of a creative company.

“

*You will be able to adapt your ideas
and take them to different formats
thanks to the content of this
program”*

In video games it is common to find cinematics that help explain and give continuity to the story. Therefore, its creative process is similar to the one used in the audiovisual production world: it is necessary to write a script, have a team of actors, plan each sequence and then execute it. In addition, video game designers are creative people with varied ideas and capable of finding innovative and technological solutions to recreate a scene.

In this sense, the student's knowledge can be perfectly transferred to the audiovisual field. Therefore, the MBA in Audiovisual Business Management will provide the necessary tools to organize and manage the processes of the different work areas involved in the creation of a television series, film or digital video. With this approach, we will begin a journey through the concepts of cultural journalism, the impact of social networks on it, and the contents that help to position themselves on different platforms.

On the other hand, the student will learn the technical aspects focused on the realization of an audiovisual project, addressing the theoretical and practical points of view that make up the creative process. In this way, the student will be able to create, from a narrative and aesthetic point of view, an audiovisual fiction, taking into account different media and technologies. Therefore, students will be able to understand the structure of the audiovisual system and the way in which the production of this type of content contemplates its financing and its investment valuation in terms of costs and benefits.

In the meantime, the bases that determine the direction of actors in fiction and the creation of narrative discourse will be established. In this way, it will be possible to continue advancing towards an understanding of the cultural industry and the new communication models that are currently being developed. On the other hand, a thorough knowledge of the new genres and formats that are being used in TV is indispensable for the student's development in this area. As a result, it will give you the necessary perspective to carry out directing tasks according to the shooting schedule, script and shooting plan.

At the end of the program, the student, as a videogame developer and designer, will be able to organize a mise-en-scene and plan narrative actions that fit different production media. In this way, representing a complete and integral work profile.

This **MBA in Audiovisual Business Management** contains the most complete and up-to-date program on the market. The most important features include:

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

“

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world”

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

The student will learn to solve complex situations in real business environments through collaborative activities and real cases.

A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

“ *Our program prepares you to face new challenges in uncertain environments and achieve success in your career”*

The case method has been the most widely used learning system among the world's leading business schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question that you are presented with in the case method, an action-oriented learning method. Over the course of 4 years, you will be presented with multiple practical case studies. You will have to combine all your knowledge, and research, argue, and defend your ideas and decisions.

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines 8 different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

This methodology has trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, and financial markets and instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Practising Skills and Abilities

They will carry out activities to develop specific skills and abilities in each subject area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization we live in.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Case Studies

Students will complete a selection of the best case studies chosen specifically for this program. Cases that are presented, analyzed, and supervised by the best specialists in the world.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.
